INTRODUCTION

Infinity Total Solutions™

Infinity Total Solutions continues Infinity's longstanding commitment to accurate sound reproduction. Our high-quality drivers, precision dividing networks and rigid, well-braced enclosures combine to deliver uncompromised performance in any multichannel home theater system. In addition, the TSS-SAT500 is magnetically shielded for safe placement adjacent to a television.

INCLUDED

(1) Speaker (1) Wall bracket

PLANNING YOUR SYSTEM

Before deciding where to best place your speakers, survey your room and study Figures 1 and 2.

Figure 1. This overhead view shows a typical home theater plan. Left/right rear channels are for a 7-channel system. Center rear channel is for a 6-channel system.

Figure 2. This figure shows an alternate layout, which may be more suitable for some rooms. Left/right rear channels are for a 7-channel system. Center rear channel is for a 6-channel system.

PLACEMENT

NOTE: The TSS-SAT500 can be placed directly on a shelf, or mounted on a wall using the included wall bracket.

As Left and Right Front Channels

For left and right front channels, place one satellite to the left and another to the right of the television, as shown in Figure 1. Since the speakers are magnetically shielded, you can place them very close to the TV without worrying about the magnetic field distorting the picture.

As Surround Channels

For left and right surround channels, place one speaker on the left and another on the right, to the side of or slightly behind the listening area. The surround speakers should be mounted at a height of between 5 ft. (1.5m) and 7 ft. (2m).

In 6- or 7-channel configurations, place the rear channel(s) behind the listening position, as shown in Figures 1 and 2.

NOTE: An Infinity powered subwoofer will add impact and realism to both music and film soundtracks. Contact your Infinity dealer for recommendations on subwoofer models for your application.

Mounting on Floor Stands

An optional TSS-STAND500 floor stand is available, should you prefer to place your TSS-SAT500 satellites on the floor; see your dealer or visit www.infinitysystems.com for more information. In addition, there is a 1/4"-20 insert in each satellite that allows the satellite to be mounted to many third-party floor stands. Unscrew the rear foot to reveal the insert.

WALL-MOUNTING

The TSS-SAT500 satellite is designed to be mounted on the wall. There is a wall bracket included. The speaker bracket will require four 1-1/2" #10 wood screws; each screw should be fastened to a wall stud. If a wall stud is unavailable, install an anchor appropriate for a 1-1/2" #10 screw.

NOTE: The customer is responsible for the correct selection and use of mounting hardware (available through hardware stores) that will ensure the proper and safe wall-mounting of the speakers.

Step 1. Detach shelf stand by removing screw in rear of speaker.

Step 2. Mark the positions on the wall where you would like to place the mounting screws.

Step 3. Place bracket against the wall and fasten four 1-1/2" #10 wood screws through the bracket's screw holes into the wall. If a wall stud is not available, use an appropriate anchor.

Step 4. Unscrew round collar (C) from bracket (A).

Step 5. Screw the ball and shaft assembly (B) to 1/4"-20 insert on rear of speaker. Back out 1/2 of a turn and tighten nut against the speaker.

Step 6. Attach speaker wire as shown on page 5.

Step 7. Drop round collar (C) over ball and shaft assembly (B) that is mounted to the speaker with the finished side of the collar facing the rear of the speaker.

Step 8. Carefully push the ball straight into the socket mounted on the wall, angle the speaker as desired and tighten the collar using the enclosed metal bar.

Figure 3. Bracket on wall.

CONNECTIONS

After placing the speakers, you are ready to connect your system. First, turn off all audio-system power. Use high-quality speaker wire to make your connections. #18-gauge speaker wire with polarity coding is included. For longer distances, #16-gauge or heavier wire is recommended. The side of the wire with a ridge or other coding is usually considered positive polarity (i.e., +). Also, consult the owner's manuals that were included with your amplifier or receiver to confirm connection procedures.

Observe polarities when making speaker connections, as shown in Figure 4. Connect each + terminal on the back of the amplifier or receiver to the respective + (red) terminal on each speaker.

Connect the – (black) terminals in the same way.

Important!

Do not reverse polarities (i.e., + to –, or – to +) when making connections. Doing so will cause poor imaging and diminished bass response. Be certain that positive and negative wire strands are completely isolated to avoid short circuits that may damage your equipment.

MAINTENANCE AND SERVICE

The TSS-SAT500 enclosure may be cleaned using a soft cloth to remove fingerprints or to wipe off dust.

All wiring connections should be inspected and cleaned or remade periodically. The frequency of maintenance depends on the metals involved in the connections, atmospheric conditions and other factors, but once per year is the minimum.

If a problem occurs, make sure that all connections are properly made and clean. If a problem exists in one loudspeaker, reverse the connection wires to the left and right system. If the problem remains in the same speaker, then the fault is with the loud-speaker. If the problem appears in the opposite speaker, the cause is in another component or cable. In the event that your TSS-SAT500 ever needs service, contact your local Infinity dealer or distributor, or visit www.infinitysystems.com for a service center near you.

Figure 4. Wiring diagram shows polarity connections for one channel of a home theater system.

SPECIFICATIONS

TSS-SAT500

Frequency Range:	150Hz – 25,000Hz (±3dB)
Recommended Amplifier Power Range:	10 – 100 watts
Sensitivity: (2.83V @ 1 meter)	86dB
Nominal Impedance:	8Ω
Crossover Frequency:	7,000Hz
Midrange Driver(s):	64mm (2-1/2") magnetically shielded
High-Frequency Driver:	19mm (3/4") magnetically shielded
Dimensions (H x W x D):	195mm x 89mm x 70mm (7-11/16" x 3-1/2" x 2-3/4")
Weight:	0.5kg (1.2 lb)
