

Powered Subwoofers

powered subwoofers

Powered subwoofers have become integral to any complete audio/visual system, particularly home theater. Normal speakers leave the very lowest frequencies unheard. Powered subwoofers fill in those blanks. For years, AudioSource has been the leader in providing quality powered subs at affordable prices. All AudioSource subwoofers include level controls and speaker inputs and outputs, as well as, line level inputs and outputs, a variable crossover from 40Hz to 180Hz, auto-on circuitry and a phase reverse switch.

SW Eight Powered Subwoofers

8 inch front firing driver
50 watt integrated amplifier
30 - 250Hz frequency response
Dimensions & Weight:
