

# Installing and Upgrading Fans in the Cisco 2821 and Cisco 2851 Series Routers

---

This document describes how to install or upgrade fans inside your Cisco 2821 and Cisco 2851 series routers.

This document is intended for the fan installer who is familiar with electronic circuitry and wiring practices and has experience as an electronic or electromechanical technician.

## Statement 1071—Warning Definition

Warning

### IMPORTANT SAFETY INSTRUCTIONS

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device. Statement 1071

### BELANGRIJKE VEILIGHEIDSINSTRUCTIES

Dit waarschuwingssymbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij elektrische schakelingen betrokken risico's en dient u op de hoogte te zijn van de standaard praktijken om ongelukken te voorkomen. Gebruik het nummer van de verklaring onderaan de waarschuwing als u een vertaling van de waarschuwing die bij het apparaat wordt geleverd, wilt raadplegen.

**Warning**

**Do not touch the power supply when the power cord is connected. For systems with a power switch, line voltages are present within the power supply even when the power switch is off and the power cord is connected. For systems without a power switch, line voltages are present within the power supply when the power cord is connected.** Statement 4

**Warning**

**Do not work on the system or connect or disconnect cables during periods of lightning activity.** Statement 1001

**Warning**

**Before opening the chassis, disconnect the telephone-network cables to avoid contact with telephone-network voltages.** Statement 1041

**Warning**

**Network hazardous voltages are present in the BRI cable. If you detach the BRI cable, detach the end away from the router first to avoid possible electric shock. Network hazardous voltages also are present on the system card in the area of the BRI port (RJ-45 connector), regardless of when power is turned off.** Statement 44

**Warning**

**Before working on a chassis or working near power supplies, unplug the power cord on AC units; disconnect the power at the circuit breaker on DC units.** Statement 12

**Warning**

**When installing the unit, always make the ground connection first and disconnect it last.** Statement 42

**Warning**

**Before working on equipment that is connected to power lines, remove jewelry (including rings, necklaces, and watches). Metal objects will heat up when connected to power and ground and can cause serious burns or weld the metal object to the terminals.** Statement 43

**Warning**

**Do not touch the power supply when the power cord is connected. For systems with a power switch, line voltages are present within the power supply even when the power switch is off and the power cord is connected. For systems without a power switch, line voltages are present within the power supply when the power cord is connected.** Statement 4

**Warning**

**Before performing any of the following procedures, ensure that power is removed from the DC circuit.**

Statement 1003

## Safety Guidelines

Follow these guidelines to ensure general safety:

- Keep the chassis area clear and dust-free during and after installation.
- Place the removed chassis cover in a safe place.
- Keep tools away from walk areas where you or others could fall over them.
- Do not wear loose clothing that may get caught in the chassis. Fasten your tie or scarf and roll up your sleeves.
- Wear safety glasses when working under conditions that may be hazardous to your eyes.
- Do not perform any action that creates a potential hazard to people or makes the equipment unsafe.

## Safety with Electricity

**Warning**

**Before working on equipment that is connected to power lines, remove jewelry (including rings, necklaces, and watches). Metal objects will heat up when connected to power and ground and can cause serious burns or weld the metal object to the terminals.** Statement 43

Follow these guidelines when working on equipment powered by electricity:

- Locate the room's emergency power-off switch. Then, if an electrical accident occurs, you can quickly shut the power off.
- Before working on the system, turn off the power and unplug the power cord.
- Disconnect all power.
- Do not work alone if potentially hazardous conditions exist.
- Look carefully for possible hazards in your work area, such as moist floors, ungrounded power extension cables, and missing safety grounds.
- Never assume that power is disconnected from a circuit. Always check.

- If an electrical accident occurs, proceed as follows:
  - Use caution, and do not become a victim yourself.
  - Turn off power to the system.
  - If possible, send another person to get medical aid. Otherwise, determine the condition of the victim and then call for help.

## Preventing Electrostatic Discharge Damage

Electrostatic discharge (ESD) can damage equipment and impair electrical circuitry. It occurs when electronic printed circuit cards are improperly handled and can result in complete or intermittent failures. Always follow ESD-prevention procedures when removing and replacing cards. Ensure that the router chassis is electrically connected to earth ground. Wear an ESD-preventive wrist strap, ensuring that it makes good skin contact. Connect the clip to an unpainted surface of the chassis frame to safely channel unwanted ESD voltages to ground. To properly guard against ESD damage and shocks, the wrist strap and cord must operate effectively. If no wrist strap is available, ground yourself by touching the metal part of the chassis.

**Caution**

---

For safety, periodically check the resistance value of the antistatic strap, which should be between 1 and 10 megohms (Mohms).

---

## Items in the Fan Replacement Kit

The fan replacement kit contains the following items:

- Fan unit (three fans connected together as one unit)
- Additional replacement screws (a few extra screws are provided in case you misplace the original screws)
- *Installing and Upgrading Fans in the Cisco 2821 and Cisco 2851 Series Routers* document (this document)

## Required Tools and Equipment

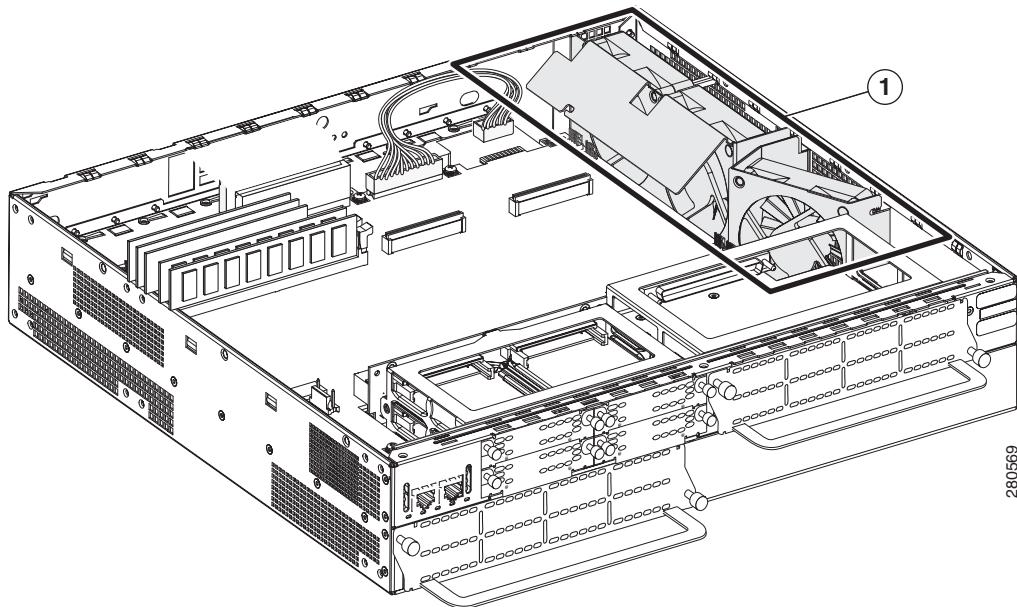

Installation might require some tools and equipment that are not provided as standard equipment with the router. The following tools and parts are required for a typical router installation:

- Number 2 Phillips screwdriver
- ESD-preventive wrist strap
- Antistatic mat

# Location of the Cisco 2821 and Cisco 2851 Router Fans

[Figure 1](#) shows the location of the fan unit in the Cisco 2821 and Cisco 2851 routers. The router contains three fans, which are connected together as one unit.

---	--------------------------	--

## Upgrading the Cisco 2821 and Cisco 2851 Fan Unit

The fan unit and cabling for the Cisco 2821 and Cisco 2851 routers are contained inside the chassis.

**Note**

The fan unit upgrade procedure will take approximately one hour.

To upgrade the fan unit, complete these procedures:

- [Removing the Router Cover, page 12](#)
- [Removing the Fan Unit, page 16](#)
- [Installing the Fan Unit, page 18](#)
- [Replacing the Router Cover, page 19](#)

## Removing the Router Cover

To access the Cisco 2821 or Cisco 2851 fan unit, you must first remove the bezel and then remove the router cover. The bezel is the front plastic panel on the chassis, which has the Cisco logo, LEDs, ports, and input power connection.

To remove the bezel and router cover, complete the steps that follow. You will need a number 2 Phillips screwdriver.

If your router uses AC or DC power, observe the following warning:

**Warning**

**Do not touch the power supply when the power cord is connected. For systems with a power switch, line voltages are present within the power supply even when the power switch is off and the power cord is connected. For systems without a power switch, line voltages are present within the power supply when the power cord is connected.** Statement 4

If your router uses DC power, observe the following warning:

**Warning**

**Before performing any of the following procedures, ensure that power is removed from the DC circuit.** Statement 1003

**Step 1**

Power down the router and disconnect the power cord from the front of the router.

**Warning**

**Before opening the unit, disconnect the telephone-network cables to avoid contact with telephone-network voltages.** Statement 1041

**Step 2**

Disconnect all network interface cables from the back panel of the router.

**Step 3**

Place the router on a flat surface.

**Step 4**

Remove the bezel from the front of the router. Follow these steps.

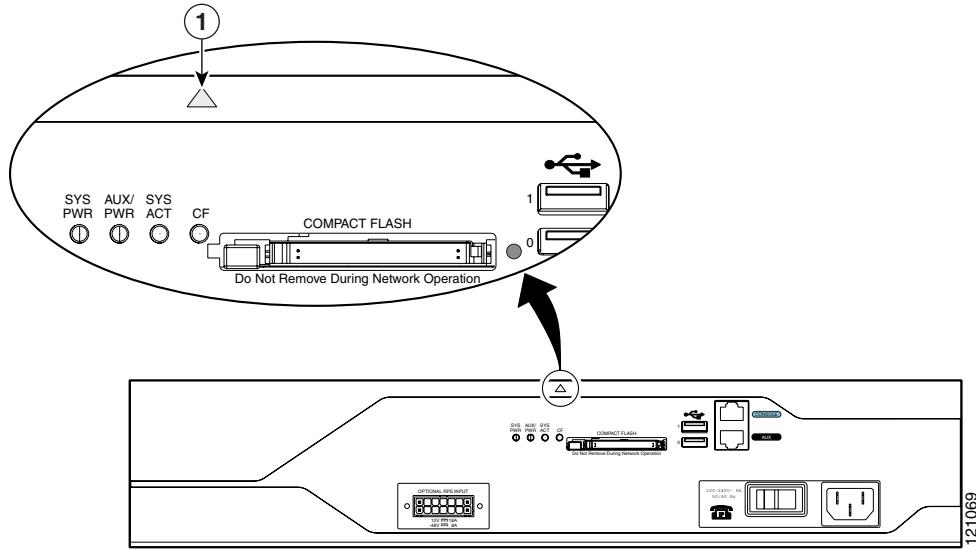

**Caution**

Before removing the bezel, make sure that the flash memory card ejector button is flush with the bezel. If the button projects from the bezel, removing the bezel can damage it.

- a. Grasp the bezel at the upward-facing arrow located at the top and center of the front bezel. (See [Figure 2](#).)

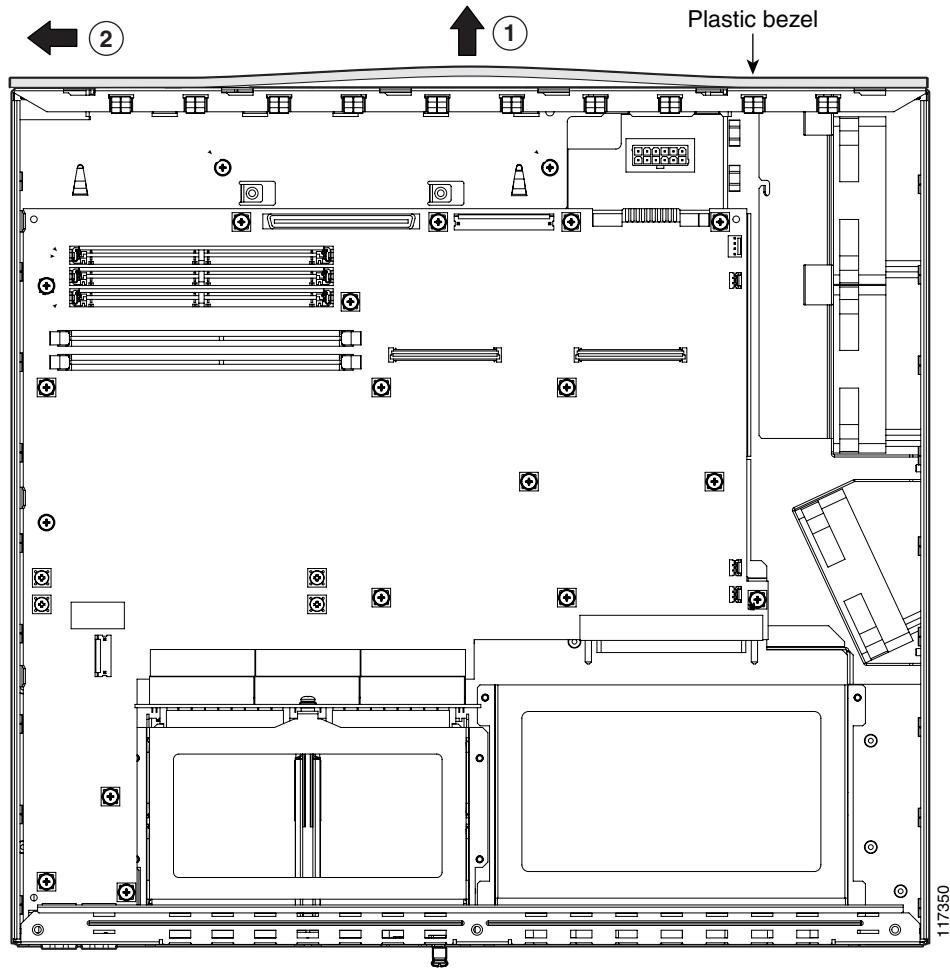

**Figure 2 Location of the Arrow on the Bezel**

**1** Location of the arrow

- b. Pull the top of the bezel 1/8 to 1/4 inch (3 to 8 mm) away from the chassis. (See number 1 in [Figure 3](#).)

**Figure 3** *Removing the Bezel*

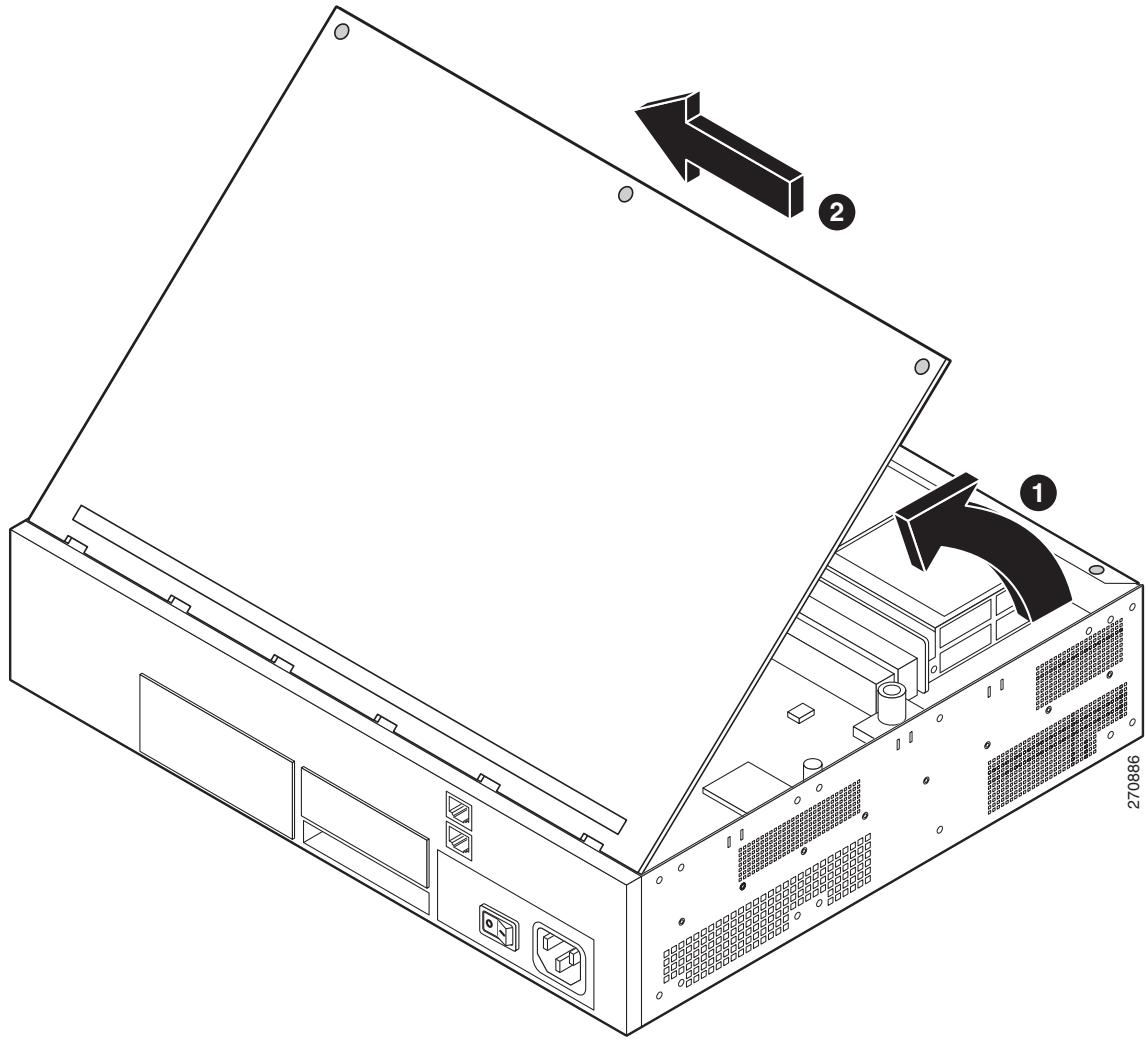

<b>1</b>	Pull top of bezel away from chassis	<b>2</b>	Slide bezel to release it from chassis
----------	-------------------------------------	----------	--

- c. While holding the bezel away from the chassis, slide it toward the left side (input power side) until it comes off the chassis, as shown in [Figure 3](#). (See number 2 in [Figure 3](#).)

**Step 5** Remove the router cover. Follow these steps:

- a. Use a number 2 Phillips screwdriver to remove the three screws at the back of the top cover. Set the screws aside in a safe place.
- b. Lift the cover up at a 45-degree angle, as shown in [Figure 4](#).

**Figure 4** *Removing the Cover from a Cisco 2821 or Cisco 2851 Router*

**2** Slide cover to free the tabs

- c. Slide the cover to the side (toward the side with the fans) until the tabs are free from the slots, as shown in [Figure 4](#).
- d. Lift the cover away from the router chassis, and set the cover aside.

## Removing the Fan Unit

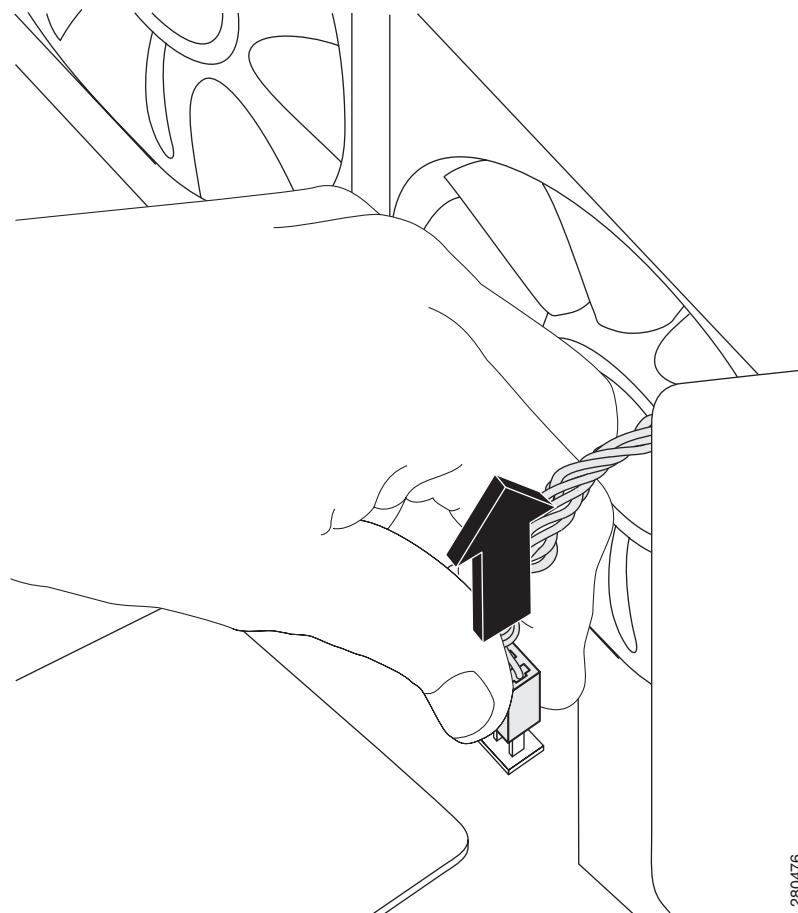

After you remove the router cover, follow these steps to remove the fan unit.

**Note** Before you begin, read the safety warnings as described in the “Safety Warnings and Guidelines” section on page 2.

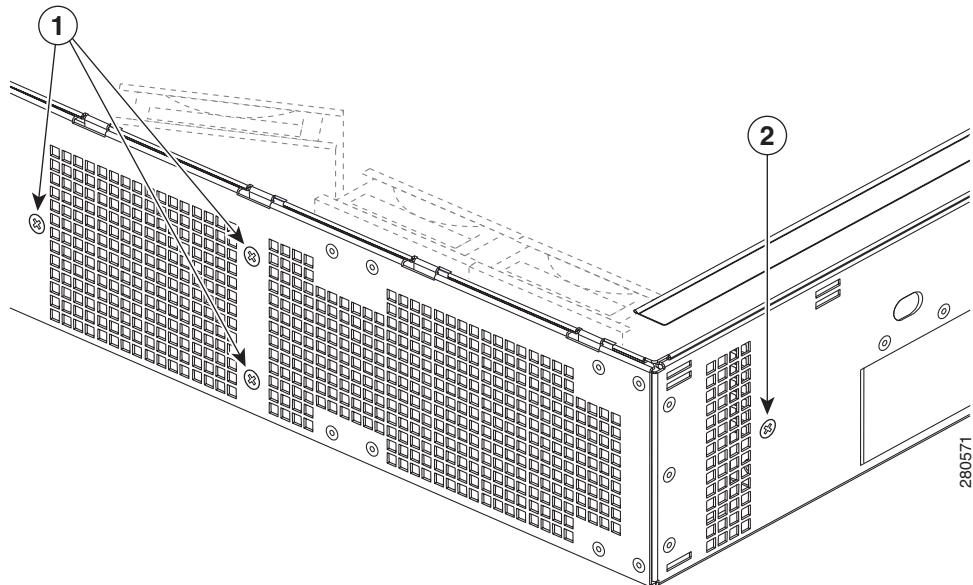

- Step 1** Locate the three fan connectors on the motherboard and remove them by lifting the connector away from the receptacle, as shown in [Figure 5](#).

**Figure 5** *Lifting the Connector from the Receptacle*

**Step 2** Remove the three screws that hold the fan unit to the side of the chassis. (See number 1 in [Figure 6](#).)

**Figure 6** *Removing Fan Mounting Screws from the Chassis*

----------	--	----------	--

**Step 3** Remove the one screw that holds the fan unit to the front of the chassis. (See number 2 in [Figure 6](#).)

**Step 4** Lift the fan unit out of the chassis.

## Installing the Fan Unit

Follow these steps to install the fan unit.

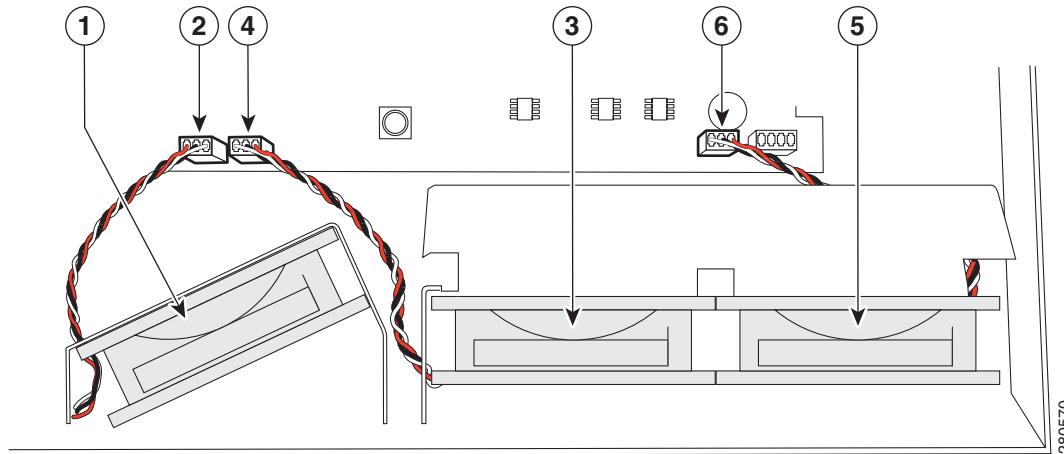

**Note** Before you begin, read the safety warnings as described in the “Safety Warnings and Guidelines” section on page 2.

- Step 1** Lower the fan unit down and onto the chassis floor.
- Step 2** Attach fan 1 to the J9 connector on the motherboard. (See number 1 and 2 in Figure 7.)
- Step 3** Attach fan 2 to the J8 connector on the motherboard. (See number 3 and 4 in Figure 7.)
- Step 4** Attach fan 3 to the J7 connector on the motherboard. (See number 5 and 6 in Figure 7.)

**Caution** The connectors are polarized/keyed to allow easy insertion in one orientation only. Orient the fan connectors correctly before you insert them. Incorrect orientation can damage the connector pins.

- Step 5** Reinstall the one screw on the front of the chassis. (See number 2 in Figure 6 on page 17.)
- Step 6** Reinstall the three screws on the side of the chassis. (See number 1 in Figure 6 on page 17.)

## Replacing the Router Cover

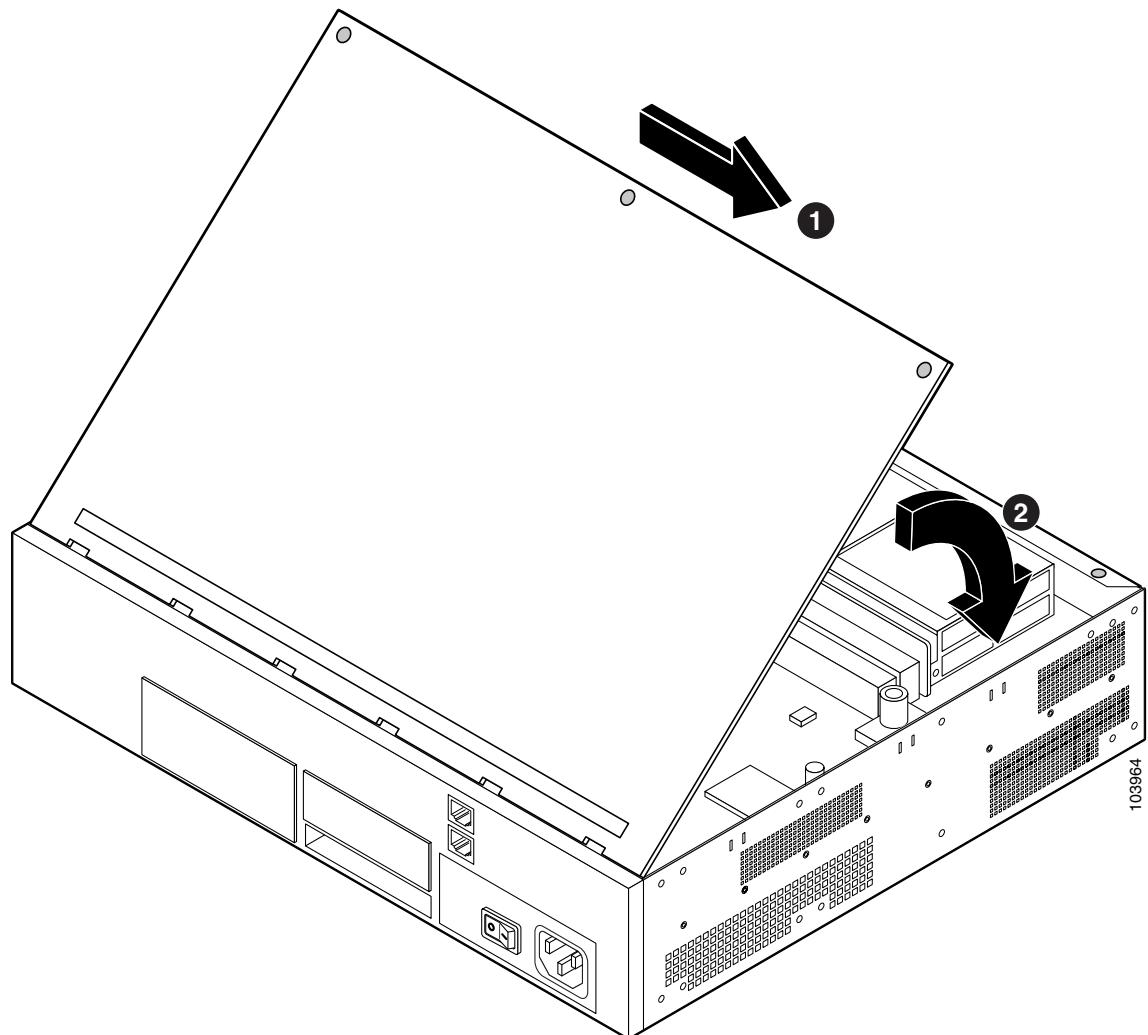

**Note** Before you begin, read the safety warnings as described in the “Safety Warnings and Guidelines” section on page 2.

To replace the chassis cover on a Cisco 2821 or Cisco 2851 router, follow these steps. You need a number 2 Phillips screwdriver.

**Step 1** Place the chassis on a flat surface.

**Step 2** Hold the cover at a 45-degree angle, and insert the tabs into the slots along the front (bezel) edge of the chassis, as shown in Figure 8.

**Figure 8** *Installing the Cover on the Cisco 2821 or Cisco 2851 Routers*

**1** Insert tabs and center the cover

**2** Close the cover

**Step 3** Center the cover over the chassis and lower it onto the chassis, as shown in [Figure 8](#).

**Step 4** Reinstall the three cover screws.

**Caution** When replacing the cover, do not pinch the wires.

**Step 5** Replace the bezel by sliding it into the front of the chassis. Make sure the upward-facing arrow on the bezel is at the top and center of the chassis, as shown in [Figure 2 on page 13](#).

**Step 6** Reconnect power and network interface cables.

**Step 7** Power up the router, and verify that the alarms and warnings disappear.
