

Product Fact Sheet

Cordless VoIP Phone

Connections for your Computer 1 510 222 0131

KEYSPAN

*Use this phone to make free calls
on the internet --
without being at your PC*

Calling with Skype has Never Been Easier!

Skype brought the world a way to make free calls over the internet. It is now used by millions of consumers.

Our new Cordless VoIP Phone makes Skype even better by allowing you to use Skype to make and receive calls without being at your computer.

While most Skype phones require you to be connected to your PC via a USB cable, our Cordless VoIP Phone uses a wireless signal that allows you to roam within your house or office while using the phone.

How It Works...

- Cordless phone receiver plugs into the USB port on a PC or Mac
- Phone communicates with the computer over a 2.4 Ghz radio signal that works through walls and furniture
- Calls are made over the PC's internet connection using Skype
- Open and close Skype with a single button on the phone
- The LCD display on the phone shows you who is online, as well as Skype status, battery level and signal quality

Features...

- Make and receive PC-to-PC and PC-to-Phone calls with Skype
- Outdoor range up to 300 ft; Indoor range up to 100 ft
- Standby time up to 1200 hours; Talk time up to 15 hours
- Recharge batteries by plugging the phone into a USB port on your PC (or with use of optional USB power adapter)
- Real time volume control
- Supports caller ID and speed dial

Part #: VP-24A MSRP: \$99.99

Requirements:

- Windows: PC with an internet connection and available USB port; Windows 2000/XP; Skype account
- Mac OS: Mac with an internet connection and available USB port; Mac OS X (10.3 or later); Skype account

Skype is a trademark of Skype Limited.
