BBF2005 Perfect Binder, BPRF-X Perforate Rotate and Fold Module, BDF-x w/optional SquareEdge Module, BCF-X Covers Feeder

Overview

For over forty years, the C.P. Bourg group of companies have been initiators and promoters of new technologies—meeting the demands of print-finishing professionals. Their success is the result of a three-fold strategy: Quality, Innovation and Efficiency. C.P. Bourg offers the latest development in binding and finishing equipment. The Xerox Manual + Book Factory, a joint partnership between Xerox, C.P. Bourg, Roll Systems and Challenge Machinery Company, is an innovative “Just in Time” solution which creates professional-quality perfect bound books in a seamless production process—emerging from the system ready to be packed and shipped. The C.P. Bourg BDFx Booklet Maker and new SquareEdge Module coupled with a high-speed Xerox Production Printer is another innovative solution ideal for creating cost-effective, high-volume booklets, manuals and pamphlets for a wide variety of industries: Insurance/Healthcare, Graphic Arts/Service Bureaus, Facility Management, Banking/Financial, Education/Government, and Manufacturing.

Horizon

Offerings

Perfect Binders: *BQ-340, BQ-270*, Bookletmakers: *ColorWorks 2000, SPF-20XII*
Horizon also makes a variety of other products: Folders, Trimmers, Collators, Stitcher /Staplers, Coil Binders, Computer Aided Binding System.

Overview

Horizon International Inc. was founded over 50 years ago in the time-honored and tradition-rich city of Kyoto, Japan. Today, Horizon operates a world-class, ISO 9001 and 14001-certified factory in Biwako, Siga, Japan, the largest facility in the world producing products for the five major paper finishing operations; folding, collating, binding, stitching, and cutting. Over 400 Horizon employees are dedicated to the design and manufacture of top-quality, highly-reliable finishing products.

The 1.5 million square-foot automated facility includes all major production processes; flexible lines for machining large parts, multiple-function lathes, gear shaping and die molding, sheet metal stamping and forming, metal plating, chip mounting, robotized warehouse, plastic injection molding, and more. The Horizon facility also has state-of-art climate and EMC testing chambers.

Collators, booklet makers, trimmers

Overview

Plockmatic is strongly focused on finishing solutions for the digital copier/printers market as well as the digital duplicator and press markets. Plockmatic products are primarily aimed for the copy/print rooms, quick printers and copy shops as well as the small to medium sized commercial printers. Our range has gradually increased and Plockmatic has, no doubt, the largest friction feed collators, booklet makers, trimmers and since two years ago the suction feed collating and binding system, DocuVac.

In the last few years we have broadened our range of products to also include mailing/inserting systems. The Plockmatic C4 insert DocuMail has proven to be a product that opens new possibilities for customers to handle their own direct mail.

It has been 20 years already since Plockmatic began their co-operation with their first OEM partner—the Rank Xerox company. Since then, both distribution channels have developed and today there is a 50/50 balance between the two categories. With distributors in more than 50 countries they have a very strong base for future expansion. This strategy means large volumes which in the end gives competitive pricing to the benefit of all of us - end users, distributors and partners.

Foliant laminator and separator

Overview

Banner American Products is a leading U.S. manufacturer of thermal laminating machines for paper products. Banner American's laminators are used for the lamination of ID cards and badges, catalogue sheets, diagrams, menus, photographs, digital color copies, etc. The machines are used by industry, government agencies, schools, print shops, most any organization which has a need to protect paper items in plastic. Banner American has received a Xerox validation on the 520HP Foliant Series Laminator and Separator. The validation is being hailed as an important milestone for those seeking to laminate graphic output from digital color copiers/presses. Laminating output from digital color copiers/presses has in the past been difficult due to heavy toner coverage, the use of fuser oil, and short drying times due to print on demand requirements. With the advent of new films and new laminators such as the 520HP Foliant Series, output from these copiers and presses can now be successfully laminated.

SuperStick® Laminating Film

Overview

D&K Group is a worldwide manufacturer of thermal laminating films and equipment. D&K specializes in custom finishes and offers a wide variety of polyester, polypropylene, Curl-Free® (nylon), and specialty films, as well as a range of both one- and two-sided thermal laminating equipment. In addition, D&K sells the expression™ line of pressure sensitive overlaminates, mounting adhesives, heat activated laminates and specialty films. SuperStick® is a revolutionary new film designed for the digital/on demand market. SuperStick® will run as well or better than other thermal films. There is less static, less adhesive transfer, and better handle-ability when laminating. SuperStick® is also user-friendly—it laminates with exceptional ease at temperatures between 230° and 290° with minimal tension and pressure adjustments required. In addition, SuperStick® is cost-effective—it reduces the total cost to produce by reducing the scrap rate.

Camera/ scanner based document verification solutions, ADF software, production workflow modules

Overview

With high-speed printing it is difficult, error prone and very expensive to provide these required verification routines with manual inspection by an operator or supervisor. Instead, Formscan verification solutions provide this necessary variable data quality control automatically—and, on every single document for 100% verification.

Formscan is the world's largest document verification solution provider, with the widest array of scanner and camera based technologies for use on multiple-makes of digital printers, collators, booklet makers, stitchers, finishing lines and mailing lines. They can integrate into any document production equipment at this show and provide per-piece document verification in-line, and at real-time production speeds.

On Demand Hard Cover binding machinery

Overview

In 1997, based on numerous customer inquiries, we chose to form a new company named On Demand Machinery, who's mission was to design and manufacture a complete line of on demand hard cover binding machinery. Our first prototypes were unveiled at the 1997 On Demand Digital Printing and Publishing Show. During this show, we met several representatives from the Xerox Corporation and we have been a Xerox finishing partner ever since! Our goal from inception was to make a line of equipment that was both economical and easy to use. I am sure you will find our ODM Casemaking Line, Sticker Casing In and Smasher Building In Machines an ideal entry level solution for the production of on demand hard cover books.

Digital Workflow Collection

Offerings

Feeders, stackers, tape binders, and stitchers across a wide range of products

Overview

The right finishing can be the finishing touch on improving your bottom line, whether you are trying to expand your product offerings, produce the same products with less manual labor, or impress new business prospects. Xerox improves your productivity with feeding and finishing options that meet your needs exactly through scalability and ultimate flexibility.
