1.0 DESCRIPTION

2.0 INSTALLATION

NOTE: *In most cases your system should work with the slide switch in the 3 position. Some non-standard applications may require the slide switch to be in the 2 position in order to receive data. If your system does not communicate after you power it up, try moving the switch as part of your troubleshooting procedure.*

The ICISERIAL25 Inter-Check® interface cable connects a cash register or other device to the ICI1000PIM.

1. Turn off power to the equipment to which you are going to connect the cable.
2. Refer to Figure 1 and set SW1 on the DB25 connector to the 3 position.
3. Plug the DB25 connector into the cash register or other device. Refer to Figures 2 and 3. For Ruby Verifone plug the connector into the printer, not the register.
