

A rigid, all metal washable air filter

- Heavy duty, steel frame construction
- Expanded steel retainers
- Bonded expanded aluminum media
- All aluminum version available
- Washable and reusable
- Standard and special sizes are available

Physical Data

Flanders Precisionaire Model KKM is a heavy duty, washable, aluminum media, all metal filter. The KKM offers large filtering area, high dust holding capacity, uniform loading and low resistance to air flow.

The KKM filter has a rugged galvanized steel frame that encloses the bonded expanded aluminum mesh media. The corners are mitered and the frame is secured with pop rivet(s). The KKM has drain holes in three corners.

The bonded aluminum media is slit and expanded to several different size openings. This design allows contaminants to be trapped throughout the entire filter depth and not just at the surface. The media is retained within the frame by expanded galvanized steel.
