If no exact matches are found, then the titles and headings are searched for inexact matches, such as inflections and synonyms. If no inexact matches are found in the titles and headings, then the text is searched for inexact matches.

A word search stops as soon as matches are found at a level described above. Pressing **(MORE)** (the red key) continues the search to the next level and finds additional matches, if any. The number of matches found at a given search level may be less than at the previous level.
