If Your Wall Plate Has Two Jacks

Use the jack that supports the fax line.

If Your Wall Plate Has One Jack For Two Lines

If your wall jack provides one jack for two phone lines, it would be best to use a "2 Line 3 Way Adapter." This adapter can be purchased at most stores that sell electronics. This device creates three plugs where there was one. One jack will be for your voice line. The other jack can be used for your fax transactions. In most cases, line 1 (L1) is used for phone calls; L2 is used of faxing. The third jack (L1+L2) allows access to both lines. This is where you would plug in a 2-line telephone, if available.
The L1 jack is usually your voice line

The L2 jack is usually your fax line

Fax to Phone Line Connection

First, connect one end of the supplied telephone cord to the telephone jack on the wall.
