OKIFAX® 5780/5980
Digital LED Network/Internet/Dual Line Facsimile

For the way you work today
and beyond

OKIFAX 5780

Highlights:

4-Line LCD display: larger display; easier to read and navigate

Navigation button: easier, faster menu selections; particularly useful in multi-user environments

Priority transmit: override allows transmission of important documents ahead of jobs waiting in queue

QWERTY® keypad: quicker input of names, numbers, and e-mail addresses

E-mail Internet Access Key: easy one-touch access for transmitting over the Internet (optional upgrade available on select units)

Back-up File Feature: automatically send a copy of all fax transactions to a 2nd fax device or e-mail address

99 Department Codes: monitor activity/usage by department, work-group or individual

Help button: one-touch access to function and programming paths

Dual access: enables scanning to memory while machine transmits or receives

Productivity upgrades: adapt to the changes in your business

Industry-leading support: 90-days On-Site[1]; 1-year warranty on parts; 5-year warranty on the LED printhead

Live, toll-free technical support 7x24x365[1]

[1] Available in the U.S. and Canada only.
[2] Based on ITU-T Test Chart #1.
[3] Requires installation of T.37 Internet/LAN Fax option kit.

High-speed, high-volume versatile workgroup fax solutions for demanding environments.

With the OKIFAX® 5780 and 5980 high-volume business facsimiles, you can get more done in far less time. Powerful yet compact, these OKI® fax machines flawlessly combine performance and reliability.

Helping you do more in less time

OKIFAX 5780/5980 models have fast transmission speeds and 50-page automatic document feeders, so users can load documents, set instructions, and get back to work quickly.

The OKIFAX 5980 and 5980 Dual Line models come standard with 12.5 MB of RAM (up to 1,000 pages[2]); the 5780 comes with 2.5 MB (up to 200 pages[2]), which can be upgraded to 10.5 MB. All three models have a 72-hour battery backup—so no faxes will be lost if the power goes out, even over a long weekend.

The 33.6 Kbps modem (the Dual Line model has two) can transmit a page in as little as 2.5 seconds[2], saving time and telephone costs. The 5980 models also have JBIG compression, so file sizes are further reduced for even faster transmission.

OKIFAX 5780/5980 units can scan documents at true 600 dpi, and deliver output at a fast 10 pages per minute. Horizontal/Vertical Reduction extends past the printable area of the page to ensure that no data is lost on a received fax or copied sheet.

With the Backup File feature, you can automatically send an electronic copy of every fax you transmit or receive to a pre-determined fax number or e-mail address.[3]

Send faxes to e-mail, communicate via your network, even use the Internet!

There's an OKI fax configuration to fit your every business need—from stand-alone workhorses to digital document portals.

With a wide range of available options, OKIFAX 5780/5980 models let you fax to e-mail via your LAN or the Internet... turn your fax machine into a true multi-functional digital document processor... and monitor and track usage through a 99-department code feature.

OKIFAX 5780/5980 Network/Internet/Dual Line: Facsimile for the way your business works today and beyond.

COMMAND PERFORMANCE™

OKIFAX® 5780/5980

Digital LED Network/Internet/Dual Line Facsimile

● ● ● ●

Flexibility and performance out of the box — upgradability to meet your changing needs.

Robust and versatile functionality is streamlined and easy to use.

- Accessing menu functions, is simple with the familiar QWERTY® keypad.
- The large LCD menu display and convenient *Navigation* and *Help* buttons make programming a snap.
- As convenience copiers, these units are able to produce up to 99 copies from a single original.
- With Unimessage™ Pro software, the OKIFAX 5780/5980 can also turn into handy 600-dpi, 10-ppm Digital LED printers.[1]

To meet your demanding business needs, the OKIFAX 5980 can be factory-configured as a Dual Line model — doubling your productivity without adding additional machines.

The basic models of the OKIFAX 5780/5980 can be easily upgraded to Internet/LAN devices via available options, including a T.37 Fax to E-mail kit, and T.38 Internet/LAN Fax with real-time confirmation.

Just pick the OKIFAX solution that's right for your business.

Advantages of Fax to e-Mail/Internet Fax

OKIFAX Fax to E-Mail:
- Allows paper documents to be sent to an e-mail address (via T.37 IP); harnesses standard Internet mail infra-structure (SMTP, POP3, MIME, etc.) for store-and-forward fax transmission

- Recipients can now retrieve their faxes from wherever they have access to e-mail — rather than having to look for an actual fax machine

OKIFAX Internet Fax:
- Enables faxes to piggyback on an existing Internet connection; fax documents travel over the Internet for the long-distance portion of their transmission
- Network administrators can leverage existing high bandwidth Internet access for no additional charge
- Savings accrue through the elimination of PSTN phone lines; charges for individual fax calls are bypassed
- Intra-company faxes can be sent for free over existing corporate intranet or Internet; T.38 real-time fax supports hand-shaking and in-call confirmation/error reports
- Corporate telecom managers can cut down on number of analog phone lines needed for dedicated fax machines (unless G3 faxing is retained as a fallback)
- Hooking up T.38 fax machines to a fax server to reach G3 machines eliminates individual phone lines; the fax server needs fewer phone lines

OKIFAX Network Fax:
- Can be linked directly to a network via an Ethernet card using T.38 IP; outgoing faxes are routed to the IP address of the receiving fax machine

- Provides savings by eliminating the cost of individual modem and phone lines for each desktop; leverages more value from the network that's already in place
- LAN fax also enables users to share fax directories

Advantages of Dual Line Fax

Double fax productivity: send and receive faxes on either line at the same time.
- Two separate phone line connections into one machine make it simple to handle two jobs at once. Increase your efficiency while reducing your time spent at the fax machine.
- Transmit to two different locations at the same time, receive from two different locations at the same time, or transmit and receive at the same time — the choice is yours.

Or configure the lines to your needs.
- Use one phone line to send and one to receive. You won't have to worry about missing an important or time-sensitive fax as it comes in.
- The second dedicated phone line can be set up to either transmit or receive, according to your specific business needs, with a default back-up to either function.

[1] Unimessage Pro software is standard on OKIFAX 5980 and OKIFAX 5980 Dual Line; optional on OKIFAX 5780.

Unimessage™ Pro and Pro LAN software: fully scalable, integrated digital document processing.

Total control with total messaging

Unimessage™ Pro and Pro LAN versions are integrated MFP software packages that can be added to OKIFAX 5780/5980 Digital Document Processing/Network Printing and Faxing options. They allow you to use fax, Internet, data management, copy, print, scan and e-mail functions, all from one system.

Choose which communication method is best for each recipient: there's no need to open a different application for each form. Unimessage Pro software allows you to receive a mixture of e-mails, data files and faxes into one universal in-box.

Greater efficiency

Unimessage Pro and Pro LAN help you to work faster and more efficiently by working in the background.

You can set them to send, receive and automatically route your messages to another location while you work

in other applications. And you can choose on-screen notification of the progress it's making as you work.

Both versions of Unimessage Pro software support inbound and outbound polling, so you can take advantage of cheaper rate periods for your fax calls.

Stand-alone and network options

Unimessage Pro is for single PCs. For network use, Unimessage Pro LAN — through a host PC — enables up to 5 concurrent users to take advantage of the power of the software and the versatility of the OKIFAX machine to enhance group productivity.

Additional seats can be added to the 5-seat Pro LAN application via 10- and 25-user upgrades, making it perfect for small departments and workgroups.
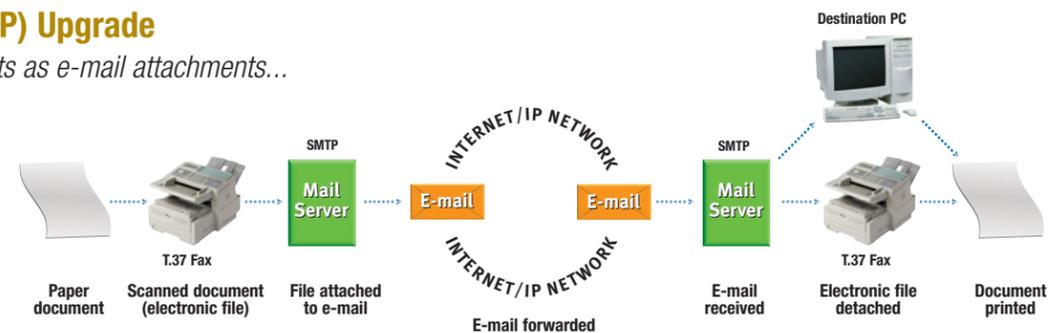

Unimessage Pro software is the one application for all of your document processing needs.

OKIFAX® 5780/5980 Options: Fax to E-Mail, Internet Faxing, and Digital Document Processing upgrades.

Fax to E-Mail (T.37 IP) Upgrade

Send hard copy documents as e-mail attachments...

- Fax original documents or forward received faxes to e-mail addresses
- Enter sender ID in subject field
- Attachments arrive as .tif or multi-page .pdf files
- Enter *Subject:*, *From:*, and *CC:* fields from Operator panel
- Selectable explanation message in e-mail

Digital Document Processing (DDP) Option

Give stand-alone units true multifunction capabilities...

Features of T.37 IP Option — with added functionality:
- Print, scan and copy documents, transmit PC faxes via Unimessage™ Pro document management software
- Archive fax documents with no added hardware or software cost
- Integrated OCR enables editing of PC files without retyping

Digital Document Processing Option with Network Faxing/Printing

Extend true multifunction capabilities to the workgroup...

Features of DDP Option — with added network functionality:
- Workgroup MFP plus PC fax capability via Unimessage™ Pro LAN software
- Manage fax services without installing an in-house fax server
- Lower-cost fax calls/No-cost intra-company fax calls

T.38 Internet Fax Option

World's first fax application of ITU T.38 Protocol...

Confirm the arrival of time-sensitive documents:
- Send faxes over LAN/Internet connection to another T.38 machine in real time with confirmation
- No-cost faxing — alternative to PSTN (i.e. no phone charges); documents sent via the network
- Can double as a traditional G3 analog device

Note: Installation requirements may vary from e-mail system to e-mail system. POP3 Server must exist in all environments that use the T.37 Internet fax reception.
