⚠警告

このマニュアルは，サービス専用です。
お客様が，このマニュアルに記載された設置や保守，点検，修理などを行うと感電や火災，人身事故につながることがあります。
危険をさけるため，サービストレーニングを受けた技術者のみご使用ください。

⚠WARNING

This manual is intended for qualified service personnel only.
To reduce the risk of electric shock, fire or injury, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so. Refer all servicing to qualified service personnel.

⚠WARNUNG

Die Anleitung ist nur für qualifiziertes Fachpersonal bestimmt.
Alle Wartungsarbeiten dürfen nur von qualifiziertem Fachpersonal ausgeführt werden. Um die Gefahr eines elektrischen Schlages, Feuergefahr und Verletzungen zu vermeiden, sind bei Wartungsarbeiten strikt die Angaben in der Anleitung zu befolgen. Andere als die angegeben Wartungsarbeiten dürfen nur von Personen ausgeführt werden, die eine spezielle Befähigung dazu besitzen.

⚠AVERTISSEMENT

Ce manual est destiné uniquement aux personnes compétentes en charge de l’entretien. Afin de réduire les risques de décharge électrique, d’incendie ou de blessure n’effectuer que les réparations indiquées dans le mode d’emploi à moins d’être qualifié pour en effectuer d’autres. Pour toute réparation faire appel à une personne compétente uniquement.

WARNING!!

AN INSULATED TRANSFORMER SHOULD BE USED DURING ANY SERVICE TO AVOID POSSIBLE SHOCK HAZARD, BECAUSE OF LIVE CHASSIS.
THE CHASSIS OF THIS RECEIVER IS DIRECTLY CONNECTED TO THE AC POWER LINE.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY A ⚠ MARK ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION!!

AFIN D’ÉVITER TOUT RISQUE D’ÉLECTROCUTION PROVENANT D’UN CHÂSSIS SOUS TENSION, UN TRANSFORMATEUR D’ISOLEMENT DOIT ETRE UTILISÉ LORS DE TOUT DÉPANNAGE.
LE CHÂSSIS DE CE RÉCEPTEUR EST DIRECTEMENT RACCORDÉ Á L’ALIMENTATION SECTEUR.

ATTENTION AUX COMPOSANTS RELATIFS Á LA SÉCURITÉ!!

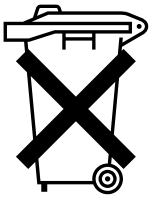
LES COMPOSANTS IDENTIFIÉS PAR UNE MAPQUE ⚠ SUR LES SCHÉMAS DE PRINCIPE, LES VUES EXPLOSÉES ET LES LISTES DE PIECES SONT D’UNE IMPORTANCE CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT. NE LES REMPLACER QUE PAR DES COMPOSANTS SONY DONT LE NUMÉRO DE PIÈCE EST INDIQUÉ DANS LE PRÉSENT MANUEL OU DANS DES SUPPLÉMENTS PUBLIÉS PAR SONY.

For the customers in the Netherlands
Voor de klanten in Nederland

Dit apparaat bevat een CR2025 batterij voor memory back-up.

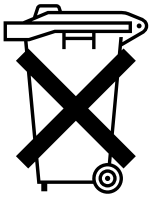
Raadpleeg uw leverancier over de verwijdering van de batterij op het moment dat u het apparaat bij einde levensduur afdankt.

Gooi de batterij niet weg. maar lever hem in als KCA.



Bij dit product zijn batterijen geleverd. Wanneer deze leeg zijn, moet u ze niet weggooien maar inleveren als KCA.

For the customers in the Netherlands
Voor de klanten in Nederland



Bij dit product zijn batterijen geleverd. Wanneer deze leeg zijn, moet u ze niet weggooien maar inleveren als KCA.

Für Kunden in Deutschland

Entsorgungshinweis: Bitte werfen Sie nur entladene Batterien in die Sammelboxen beim Handel oder den Kommunen. Entladen sind Batterien in der Regel dann, wenn das Gerät abschaltet und signalisiert “Batterie leer” oder nach längerer Gebrauchsdauer der Batterien “nicht mehr einwandfrei funktioniert”. Um sicherzugehen, kleben Sie die Batteriepole z.B. mit einem Klebestreifen ab oder geben Sie die Batterien einzeln in einen Plastikbeutel.

CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

ADVARSEL

Lithiumbatteri - Eksplosjonsfare.
Ved utskifting benyttes kun batteri som anbefalt av apparatfabrikanten.
Brukt batteri returneres apparatleverandøren.

Vorsicht!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.

Ersatz nur durch denselben oder einen vom Hersteller empfohlenen ähnlichen Typ. Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en likvärdig typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt gällande föreskrifter.

ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.

Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

VAROITUS

Paristo voi räjähtää jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

ADVARSEL!

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

Operating Instructions

This section is extracted from operation manual.

WARNING

Owner's Record

The model and serial numbers are located on the rear. Record the model and serial numbers in the spaces provided below. Refer to these numbers whenever you call upon your Sony dealer regarding this product.

Model No._____ Serial No._____

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.

For the customers in the U.S.A.

If you have any questions about this product, you may call: Sony's Business Information Center (BIC) at 1-800-686-SONY (7669)

or Write to: Sony Customer Information Services Center 6900-29 Daniels Parkway, PMB 330 Fort Myers, Florida 33912

Declaration of Conformity

Trade Name:	SONY
Model:	PFM-42B1
Responsible Party:	Sony Electronics Inc.
Address:	1 Sony Drive, Park Ridge, NJ 07656 U.S.A.
Telephone Number:	201-930-6972

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

For the customers in Canada

This class B digital apparatus complies with Canadian ICES-003.

For PFM-42B1E users

THIS APPARATUS MUST BE EARTHED

IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

Green-and-yellow : Earth
Blue : Neutral
Brown : Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:
The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked with the letter E or by the safety earth symbol ⏚ or coloured green or green-and-yellow.
The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.
The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

Voor de klanten in Nederland

- Dit apparaat bevat een Li-ion batterij voor clock back-up.
- De batterij voor clock back-up is vastgesoldeerd op de B printplaat BAT500.
- Raadpleeg uw leverancier over de verwijdering van de batterij op het moment dat u het apparaat bij einde levensduur afdankt.
- Gooi de batterij niet weg, maar lever hem in als KCA.

The socket-outlet should be installed near the equipment and be easily accessible.

Table of Contents

Precautions

On safety

- A nameplate indicating operating voltage, power consumption, etc. is located on the back of the unit.
- Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.
- Unplug the unit from the wall outlet if it is not to be used for several days or more.
- To disconnect the AC power cord, pull it out by grasping the plug. Never pull the cord itself.
- When the unit is installed on the floor, be sure to use the optional stand.

On installation

- Allow adequate air circulation to prevent internal heat build-up. Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation holes.
- Do not install the unit in a location near heat sources such as radiators or air ducts, or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.
- When you install multiple equipment with the unit, the following problems, such as malfunction of the Remote Commander, noisy picture, noisy sound, may occur depending on the position of the unit and other equipment.

On the PDP (Plasma Display Panel)

- There may be some tiny black points and/or bright points on the PDP. These points are normal.
- Do not display the same still image on the screen for a long time. Otherwise, an afterimage or ghost may appear on a part of the panel. Use the screen saver function to equalize use of the screen display.

On cleaning

To keep the unit looking brand-new, periodically clean it with a mild detergent solution. Never use strong solvents such as thinner or benzine, or abrasive cleansers since these will damage the cabinet. As a safety precaution, unplug the unit before cleaning it.

On repacking

Do not throw away the carton and packing materials. They make an ideal container in which to transport the unit. When shipping the unit to another location, repack it as illustrated on the carton.

If you have any questions about this unit, contact your authorized Sony dealer.

Features

The PFM-42B1/42B1E series are 16:9 42-inch flat panel monitors utilizing a PDP (Plasma Display Panel), which can accept various types of signals with the built-in scan converter.

Improved image quality
The PFM-42B1/42B1E series achieves higher image quality with its PDP (Plasma Display Panel) set to 1024 dots × 1024 lines. This makes for a finely-detailed HDTV or PC image.

Internal high-performance scan converter
The monitor has a high performance scan converter. Using a unique algorithm, the monitor processes signals in a wide range of formats — Video, HDTV, PC, etc.

Flexibility
An option slot is in place for future expansion.
The slot-in optional adaptor allows for quick and easy system upgrades.

Other features
- Three sets of video inputs with audio input: one composite video or Y/C input and two RGB/ component inputs. (For the PFM-42B1E, the BKM-B10 video input adaptor is required to input the composite video and Y/C signals.)
- Displays the HDTV signal with a tri-level sync signal.
- Three dimensional comb filter for NTSC Y/C separation.
- Line correlation comb filter for PAL Y/C separation.
- Automatic input signal detection with on-screen indication.
- Windows[1]95/98 PnP (Plug and Play) compatible.
- Picture AGC function — this function automatically adjusts and improves the contrast when a low intensity signal is input.
- On-screen menu for various adjustments and settings
- On-screen display in six languages for user-friendly access. (Languages: English, German, French, Italian, Spanish and Japanese)
- Fine adjustment of image size and position
- Memory function for storage of up to twenty picture settings.
- ID control
- Self-diagnosis function
- Remote (RS-232C) connector (D-sub 9-pin)
- Accepts infrared Sony Remote Commanders using SIRCS code.
- Vertical setup
- Closed caption decoder
- Screen saver to reduce afterimage or ghosting.

Warning on power connection
Use the proper power cord for your local power supply.

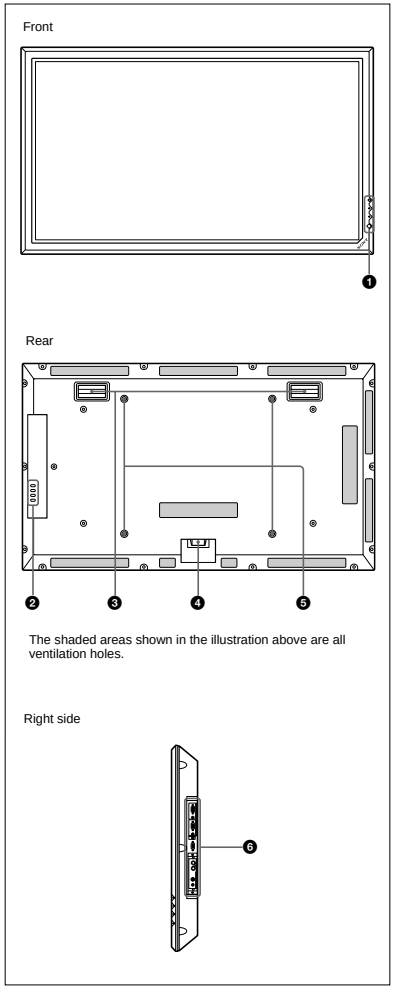
Location and Function of Parts and Controls

Front / Rear / Right Side



❶ ⏻ (standby) switch / indicator section
For details on the ⏻ (standby) switch / indicator section, see "⏻ (standby) Switch / Indicator Section" on page 8 (GB).

❷ Control button section
For details on the control button section, see "Control Button Section (Rear)" on page 8 (GB).

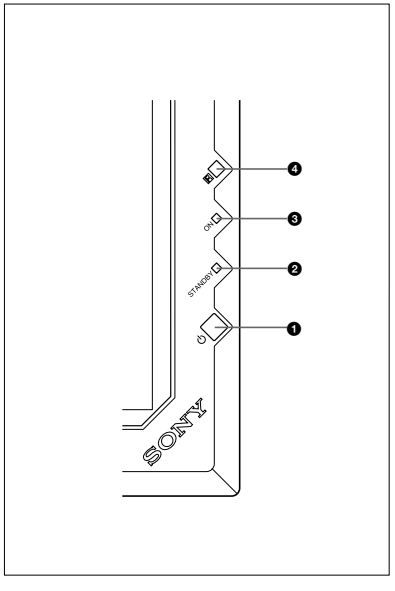
❸ Carrying handles

❹ ∿AC IN socket
Connect the supplied AC power cord to this socket and to a wall outlet. Once you connect the AC power cord, the STANDBY indicator lights up in red and the monitor turns to the standby mode.

❺ Stand installation hooks
Use these hooks to install the stand (not supplied).

❻ Connector panel
For details on the connector panel, see "Connector Panel" on page 9 (GB).

⏻ (standby) Switch / Indicator Section



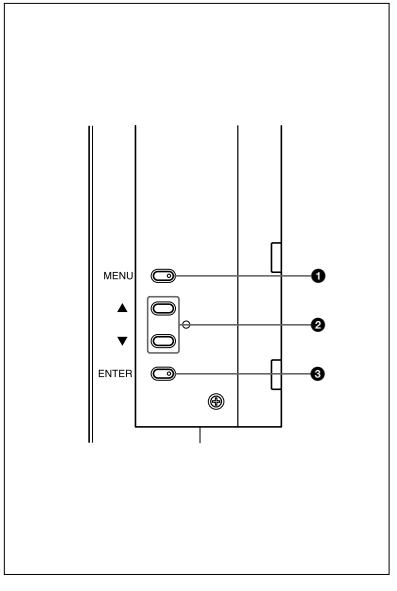
❶ ⏻ (standby) switch
Press to turn on the monitor. Press again to go back to the standby mode.

❷ STANDBY indicator
Lights up in red in the standby mode.
When the STANDBY indicator flashes, see "Self-diagnosis Function" on page 35 (GB).

❸ ON indicator
Lights up in green when the monitor is turned on.

❹ Remote control detector
Receives the signal from the Remote Commander.

Control Button Section (Rear)

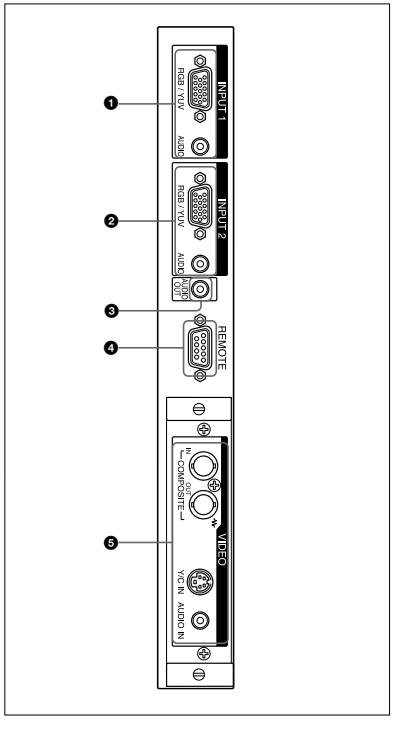


❶ MENU button
Press to make the menu appear. When the menu is displayed on the monitor screen, press to return to the previous menu level. To clear the menu display, press this button repeatedly until the menu disappears.

❷ ▲ / ▼ buttons
Press to move the cursor (▶) to an item or to adjust a value in a menu.

❸ ENTER button
Press to select the desired item from the menu displayed.

Connector Panel



❶ INPUT1 connectors
RGB/YUV (D-sub 15-pin): Connects to the RGB signal or component (YUV) signal output of a computer or a piece of video equipment.
This monitor also accepts an HD analog component (Y/PB/PR) signal. See "Pin assignment" on page 39 (GB) when inputting a component signal.
AUDIO (Stereo minijack): Inputs an audio signal. Connects to the audio output of a computer or a piece of video equipment.

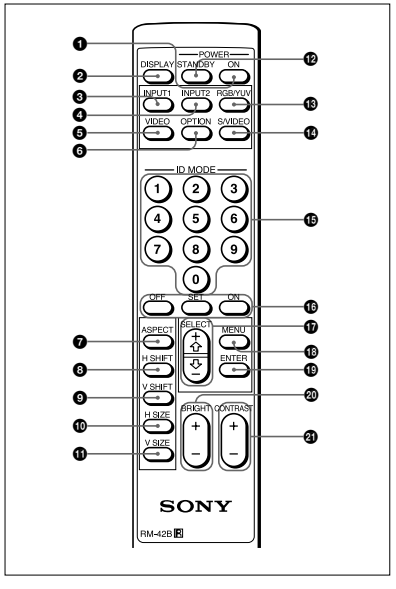
❷ INPUT2 connectors
RGB/YUV (D-sub 15-pin): Connects to the RGB signal or component (YUV) signal output of a computer or a piece of video equipment.
This monitor also accepts an HD analog component (Y/PB/PR) signal. See "Pin assignment" on page 39 (GB) when inputting a component signal.
AUDIO (Stereo minijack): Inputs an audio signal. Connects to the audio output of a computer or a piece of video equipment.

❸ AUDIO OUT jack (Stereo minijack)
From among the audio signals input at the audio input jacks, outputs the audio signal displayed on the monitor screen.

❹ REMOTE (RS-232C) connector (D-sub 9-pin)
This connector allows remote control of the monitor using the RS-232C protocol. For details, contact your authorized Sony dealer.

❺ VIDEO connectors
The PFM-42B1E is not equipped with VIDEO connectors. For the PFM-42B1E, composite video and Y/C input can be input to the monitor when the BKM-B10 video input adaptor (not supplied) is installed in the monitor.
COMPOSITE IN (BNC-type): Connects to the composite video signal output of a piece of video equipment.
COMPOSITE OUT (BNC-type): Connects to the composite video signal input of a piece of video equipment.
Y/C IN (Mini DIN 4-pin): Connects to the Y/C signal output of a piece of video equipment.
AUDIO IN (Stereo minijack): Inputs an audio signal. Connects to the audio output of a piece of video equipment.

Remote Commander RM-42B



❶ POWER ON switch
Press to turn on the monitor.

❷ DISPLAY button
Displays the input signal information and the time at the top of the monitor screen. Press again to clear it.

❸ INPUT1 button
Selects the signal input from the INPUT1 connectors.

❹ INPUT2 button
Selects the signal input from the INPUT2 connectors.

❺ VIDEO button
Selects the signal input from the COMPOSITE IN connector or Y/C IN connector from among the VIDEO connectors.

❻ OPTION button
Selects the signal input from the optional adaptor when you install it in the unit.

❼ ASPECT button
Changes the aspect ratio of the picture.

❽ H SHIFT button
Adjusts the horizontal centering. Press this button and then adjust the horizontal centering with the SELECT +↑/–↓ button ⓱.

❾ V SHIFT button
Adjusts the vertical centering. Press this button and then adjust the vertical centering with the SELECT +↑/–↓ button ⓱.

❿ H SIZE button
Adjusts the horizontal picture size. Press this button and then adjust the horizontal picture size with the SELECT +↑/–↓ button ⓱.

⓫ V SIZE button
Adjusts the vertical picture size. Press this button and then adjust the vertical picture size with the SELECT +↑/–↓ button ⓱.

⓬ STANDBY button
Press to turn the monitor to the standby mode.

⓭ RGB/YUV button
Press to select the format matching that of the input signal connected to the INPUT1 or INPUT2 connector. Each press toggles between RGB and YUV.

⓮ S/VIDEO button
Press to select the signal input from the COMPOSITE IN connector or Y/C IN connector from among the VIDEO connectors. Each press toggles between COMPOSITE IN and Y/C IN.

⓯ Number buttons
Press to enter the index number.

⓰ ID MODE (ON/SET/OFF) buttons
Press the ON button to make an index number appear on the screen. Then enter the index number of the monitor you want to operate using the number buttons ⓯ and press the SET button. After you finish the operation, press the OFF button to return from the ID mode to the normal mode.
For details about the index number, see "Operating a Specific Monitor With the Remote Commander" on page 35 (GB).

⓱ SELECT +↑/–↓ button
Press to move the cursor (▶) to an item or to adjust a value in a menu.

⓲ MENU button
Press to make the menu appear. When the menu is displayed on the monitor screen, press to return to the previous menu level. To clear the menu display, press this button repeatedly until the menu disappears.

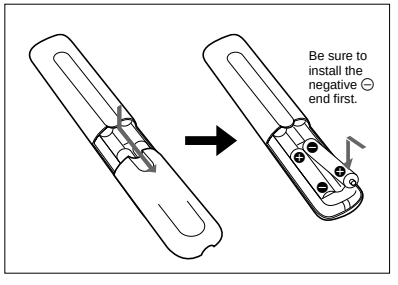
⓳ ENTER button
Press to select the desired item in a menu.

⓴ BRIGHT +/– button
Adjusts the brightness.

㉑ CONTRAST +/– button
Adjusts the contrast.

Installing batteries

Insert two size AA (R6) batteries in correct polarity.



- In normal operation, batteries will last up to half a year. If the Remote Commander does not operate properly, the batteries might be exhausted sooner. Replace them with new ones.
- To avoid damage from possible battery leakage, remove the batteries if you do not plan to use the Remote Commander for a fairly long time.

When the Remote Commander does not work

Check that the STANDBY indicator lights up and the REMOTE MODE in the REMOTE menu is not set to OFF. The Remote Commander operates the monitor only when both of the two conditions below are met.
- The monitor is turned on, or it is in the standby mode.
- The REMOTE MODE in the REMOTE menu is set to TV or to PJ.

For details about the REMOTE MODE, see "REMOTE menu" on page 16 (GB).

Caution

- When you use the monitor, make sure there is more space between the edges of the unit and other walls or the ceiling than that shown in the figure below. This will allow for proper ventilation.
- The ambient temperature must be 0 °C to +35 °C (32 °F to 95 °F).
- Use the SU-42B monitor stand (not supplied) as a stand.
- The wall should be reinforced to bear at least five times the weight of the monitor (approx. 29.4 kg) plus the wall bracket you are planning to use.
- Regarding installation of hardware such as brackets, screws, and bolts, we cannot specify what to use because actual installation is up to the authorized local dealers. For installation, consult with qualified Sony personnel.

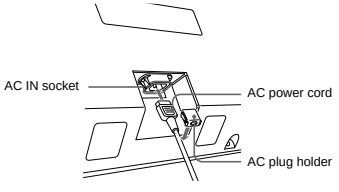
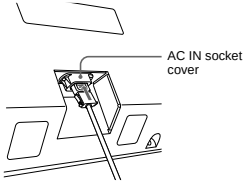
Connections

Connecting the AC Power Cord

1 Plug the AC power cord into the AC IN socket. Then, attach the AC plug holder (supplied) to the AC power cord.



2 Slide the AC plug holder over the cord until it connects to the AC IN socket cover.



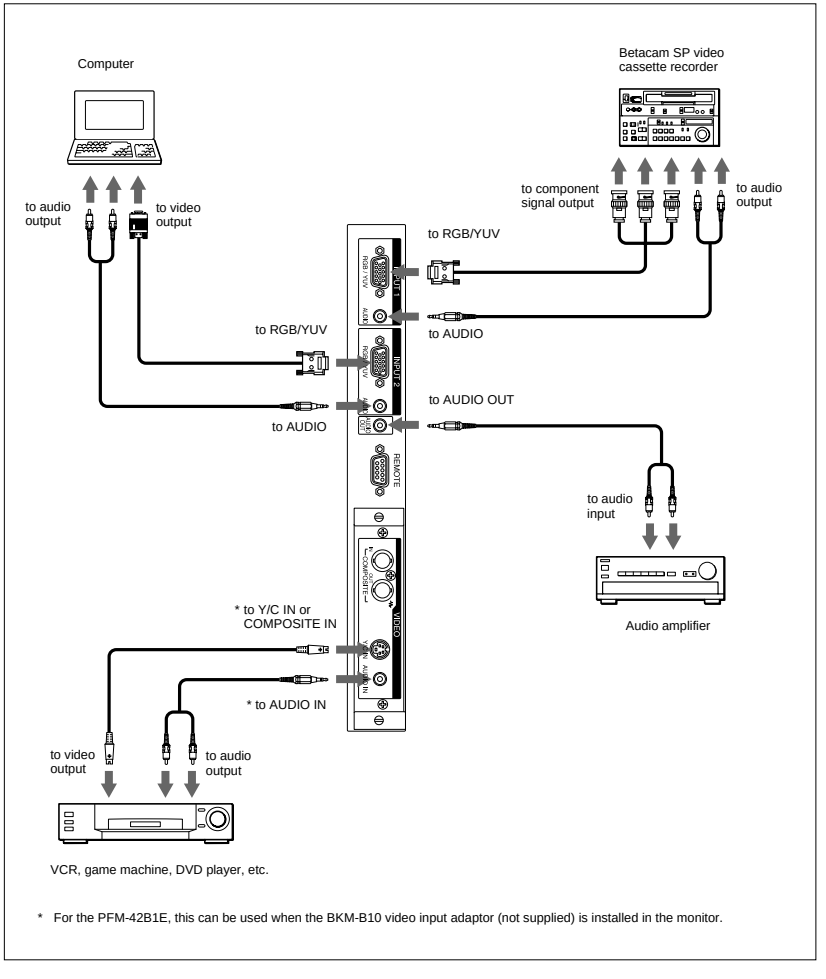
To remove the AC power cord

After squeezing the AC plug holder and freeing it, grasp the plug and pull out the AC power cord.

Connection Example

Before you start

- First make sure that the power to each piece of equipment is turned off.
- Use connecting cables suitable for the equipment to be connected.
- The cable connectors should be fully inserted into the jacks. A loose connection may cause hum and other noise.
- To disconnect the cable, pull it out by grasping the plug. Never pull the cable itself.
- Refer to the instruction manual of the equipment to be connected.
- Insert the plug securely into the AC IN socket.
- Use one of the two AC plug holders (supplied) that will securely hold the AC plug.



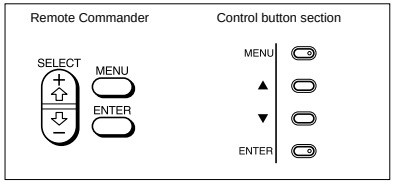
* For the PFM-42B1E, this can be used when the BKM-B10 video input adaptor (not supplied) is installed in the monitor.

Using On-screen Menus

Operating Through Menus

Menu operating buttons

Use the buttons on the monitor or the Remote Commander for menu operations.

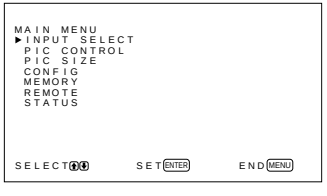


The buttons on the control button section are used for purposes of explanation in this operating instructions. The SELECT +⬆/–⬇ button on the Remote Commander has the same functions as the ▲ / ▼ buttons on the control button section.

Configuration of the menu

To select the language used in the menu, see page 30 (GB).

1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (▶) and press ENTER to select a menu.
The selected menu appears on the monitor screen.

3 Press ▲ / ▼ to move the cursor (▶) and press ENTER to select an item.
The menu for the selected item appears on the monitor screen.

4 Press ▲ / ▼ to adjust or select the setting and press ENTER to set.
The setting is registered and the menu returns to the previous menu.

To return to the normal screen, press the MENU button repeatedly until the menu disappears.

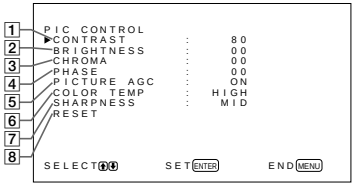
Menu Guide

Note

"– – – –" appears next to an item when its function is not available. The availability depends on the types of input signal.

PIC CONTROL menu

This menu is used for adjusting the picture.



1 CONTRAST
Press ▲ to increase the contrast and press ▼ to decrease it.

2 BRIGHTNESS
Press ▲ to make the picture brighter and press ▼ to make it darker.

3 CHROMA
Press ▲ to increase color saturation and press ▼ to decrease it.

4 PHASE
Press ▲ to make the overall picture greenish and press ▼ to make it purplish.

5 PICTURE AGC
Select ON to automatically increase the brightness when a low brightness signal is input.
This function works only for VIDEO input or 15 kHz YUV input.

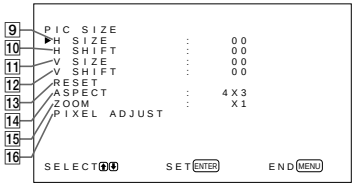
6 COLOR TEMP
Changes the color temperature.
For details, see "COLOR TEMP" on page 22 (GB).

7 SHARPNESS
Changes the outline correction level using the following three levels (HIGH, MID or LOW).
For details, see "SHARPNESS" on page 23 (GB).

8 RESET
Restores the factory settings in the PIC CONTROL menu items 1 to 7.
For details on using the reset function, see "Restoring the PIC CONTROL Menu Items to Their Original Settings" on page 23 (GB).

PIC SIZE menu

This menu is used for resizing and positioning the picture.



9 H SIZE
Adjusts the horizontal picture size. Press ▲ to enlarge the horizontal size and press ▼ to diminish it.

10 H SHIFT
Adjusts the horizontal centering. Press ▲ to move the picture to the right and press ▼ to move it to the left.

11 V SIZE
Adjusts the vertical picture size. Press ▲ to enlarge the vertical size and press ▼ to diminish it.

12 V SHIFT
Adjusts the vertical centering. Press ▲ to move the picture up and press ▼ to move it down.

13 RESET
Restores the factory settings in PIC SIZE menu items 9 to 12.
For details on using the reset function, see "Restoring the Original Picture Size and Position" on page 25 (GB).

14 ASPECT
Changes the aspect ratio of the picture.
For details, see "Changing the Aspect Ratio" on page 26 (GB).

15 ZOOM
Enlarges the image (in order) to double (×2), triple (×3) and quadruple (×4).

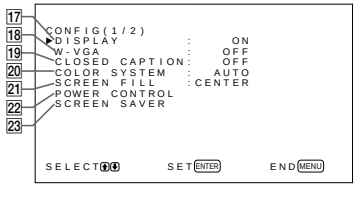
Note

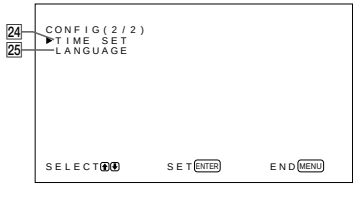
When you set ASPECT to W ZOOM or LB ZOOM, "– – – –" appears and you cannot set ZOOM to ×2, ×3 or ×4.

16 PIXEL ADJUST
Adjusts the dot phase and the total number of horizontal pixels when you see noise on the edges of the characters and the vertical lines.
For details, see "Adjusting the Pixels" on page 27 (GB).

CONFIG menu

This menu is used for adjusting the signal or selecting the language. This menu consists of two pages; CONFIG (1/2), CONFIG (2/2). To toggle between pages, press the ▲ / ▼ buttons repeatedly until the other page appears.





17 DISPLAY
Select ON to display the input signal information for about five seconds at the top of the monitor screen when the power is turned on or when switching the input signal.

18 W-VGA
Select ON to input the W-VGA (852×480) signal. When you set this item to ON, the VGA input signal is determined to be 852 × 480. Otherwise, the VGA input signal is determined to be 640 × 480.

19 CLOSED CAPTION
Displays closed captions.
For details, see "Displaying closed captions" on page 19 (GB).

20 COLOR SYSTEM
Selects the input signal.
AUTO: to display NTSC, PAL or SECAM signals
443NT: to display NTSC4.43 signals
PAL60: to display PAL60 signals
PAL-M: to display PAL-M signals

21 SCREEN FILL
Selects the point of origin for resizing the picture.
CENTER: Sets the point of origin at the center of the monitor.
CORNER: Sets the point of origin at the upper-left corner of the monitor.

22 POWER CONTROL
Sets the length of time until the system goes into the power saving mode.
For details, see "Controlling Power On/Off Automatically (Power Control Function)" on page 33 (GB).

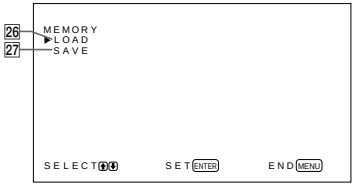
23 SCREEN SAVER
Enables a screen saver to reduce afterimage or ghosting.
For details, see "Reducing Afterimage/Ghosting (Screen Saver Function)" on page 31 (GB).

24 TIME SET
Sets the time.
For details, see "Adjusting the time" on page 19 (GB).

25 LANGUAGE
Selects the on-screen language (English, German, French, Italian, Spanish or Japanese).
For details, see "Selecting the On-screen Language" on page 30 (GB).

MEMORY menu

This menu is used for saving or recalling the settings in the PIC CONTROL and PIC SIZE menus.



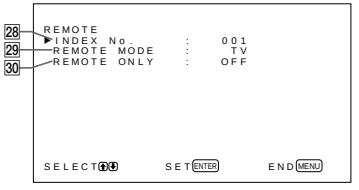
For details, see "Using the Memory Function" on page 28 (GB).

26 LOAD
Recalls the preset settings.

27 SAVE
Saves the settings.

REMOTE menu

This menu is used for remote control settings.



28 INDEX No.
Sets the index number of the monitor.

Note
When you set the number, use the buttons on the monitor.
For details about the index number, see "Operating a Specific Monitor With the Remote Commander" on page 35 (GB).

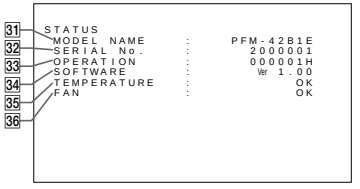
29 REMOTE MODE
Selects the Remote Commander mode.
TV: The Sony monitor's or the TV's commander
PJ: The Sony projector's commander
OFF: Disables the remote control.

Note
When you change the Remote Commander mode, use the buttons on the monitor. You cannot change the Remote Commander mode with the Remote Commander.
For details, see "Using Other Remote Commander Models" on page 37 (GB).

30 REMOTE ONLY
Select ON to disable the control buttons on the monitor. The monitor can only be controlled with the Remote Commander.
To cancel the REMOTE ONLY mode, set REMOTE ONLY to OFF with the Remote Commander, or press the MENU button while pressing the ⏻ (standby) switch on the monitor. The monitor turns to the standby mode and the REMOTE ONLY mode is cancelled.
The setting in this item is still retained when the AC power cord is disconnected or when you turn on/off the monitor with the Remote Commander.

STATUS menu

This menu is used for displaying the internal status of the monitor.



31 MODEL NAME
Indicates the model name.

32 SERIAL No.
Indicates the serial number.

33 OPERATION
Indicates the total number of hours of operation.

Note
The standby mode is not counted as part of the OPERATION time.

34 SOFTWARE
Indicates the system software version.

35 TEMPERATURE
Indicates whether the internal temperature of the monitor is normal.
OK: Normal
NG: Unusual
When the internal temperature is unusual, NG is displayed and the item flashes in red. The STANDBY indicator on the ⏻ (standby) switch / indicator section also flashes.

Note
The "TEMPERATURE NG" message may appear when the ventilation holes are blocked or the monitor is installed in a poorly ventilated location. In this case, check that the ventilation holes are not blocked and install the monitor in a well ventilated location. If the message is still displayed, contact your authorized Sony dealer.
When the STANDBY indicator flashes or NG is indicated, see "Self-diagnosis Function" on page 35 (GB).

36 FAN
Cooling fans are built into this monitor. This item indicates whether the cooling fans work properly.
OK: Normal
NG: Unusual
When the cooling fans are not working normally, NG is displayed and the item flashes in red. The STANDBY indicator on the ⏻ (standby) switch / indicator section also flashes.

Notes
- When the "FAN NG" message appears, contact your authorized Sony dealer.
  When the STANDBY indicator flashes or NG is indicated, see "Self-diagnosis Function" on page 35 (GB).
- The cooling fans detect the monitor's internal temperature and control the fan rotation. If the ambient temperature is high, the fan speed increases and the fan noise will be louder.

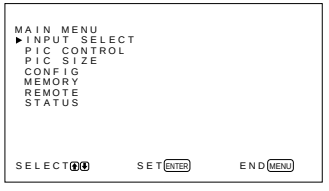
Watching the Picture

Before you start

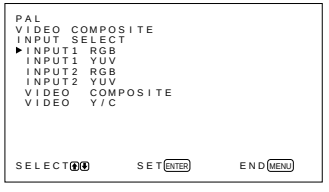
- Turn on the monitor.
- Turn on the connected equipment and play a video source.
- To display the input signal information on the screen when turning on the power or switching the input signal, set "DISPLAY" in the CONFIG (1/2) menu to ON.
- To select the on-screen language used in the menu, see page 30 (GB).

Switching the Input Signal

1 Press MENU.
The main menu appears on the monitor screen.

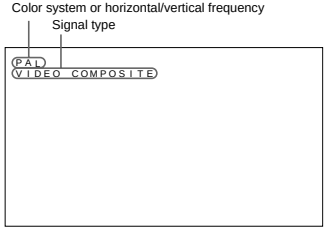


2 Press ▲ / ▼ to move the cursor (▶) to "INPUT SELECT" and press ENTER.
The currently selected input signal and INPUT SELECT menu appear on the monitor screen.



3 Press ▲ / ▼ to move the cursor (▶) to the input source to be displayed and press ENTER.
INPUT1 RGB: Selects the audio and video signal input from the INPUT1 connectors when the input signal is an RGB signal.
INPUT1 YUV: Selects the audio and video signal input from the INPUT1 connectors when the input signal is a component signal.
INPUT2 RGB: Selects the audio and video signal input from the INPUT2 connectors when the input signal is an RGB signal.
INPUT2 YUV: Selects the audio and video signal input from the INPUT2 connectors when the input signal is a component signal.
VIDEO COMPOSITE: Selects the audio and video signal input from the COMPOSITE IN connector and AUDIO IN jack among the VIDEO connectors.
VIDEO Y/C: Selects the audio and video signal input from the Y/C IN connector and AUDIO IN jack among the VIDEO connectors.
(For the PFM-42B1E, VIDEO COMPOSITE and VIDEO Y/C only appear when the BKM-B10 video input adaptor (not supplied) is installed.)

The selected input signal appears on the monitor screen.



You can also switch the input signal using the Remote Commander.

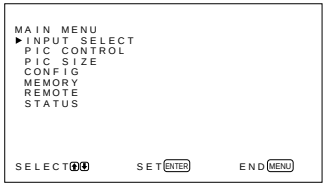
Note

We recommend input source video equipment equipped with a TBC (time base corrector). If the monitor receives a signal without TBC, the picture may disappear due to disturbance of the sync signal.

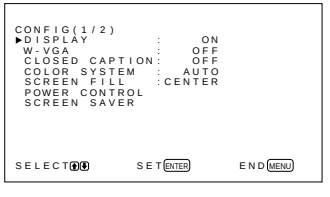
Switching the Display Mode

Displaying closed captions

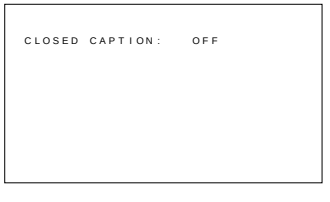
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (▶) to "CONFIG" and press ENTER.
The CONFIG (1/2) menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (▶) to "CLOSED CAPTION" and press ENTER.
The following menu appears on the monitor screen.

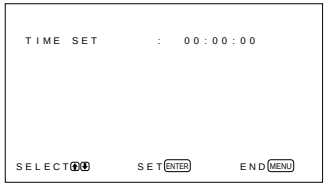


4 Select the caption type with ▲ / ▼.
OFF: The caption is not displayed.
CAPT1: Displays caption1 over the picture.
CAPT2: Displays caption2 over the picture.
TEXT1: Displays caption1 against a black background.
TEXT2: Displays caption2 against a black background.

5 Press MENU.
The menu returns to the CONFIG (1/2) menu.

Adjusting the time

1 In the CONFIG (2/2) menu, press ▲ / ▼ to move the cursor (▶) to "TIME SET" and press ENTER.
The following menu appears on the monitor screen.



2 Press ENTER.
The background of the hour is displayed in cyan.

3 Adjust the hour with ▲ / ▼ and press ENTER.
The setting for the hour is entered and the background of the minute is displayed in cyan.

4 Similarly, adjust the minute and press ENTER.
The setting for the minute is entered and the second is reset to 00.

To display the time

Press the DISPLAY button on the Remote Commander. The time is displayed in the upper-right corner of the monitor.

Input Signal and Monitor Status Information Display

Input signal and monitor status information is displayed on the monitor screen for about five seconds when the power is turned on or when switching the input signal.
To disable this function, follow the steps below.

1 In the CONFIG (1/2) menu, press ▲ / ▼ to move the cursor (▶) to "DISPLAY" and press ENTER. The following menu appears on the monitor screen.

2 Press ▲ / ▼ to set DISPLAY to OFF and press ENTER.
The DISPLAY function is disabled.

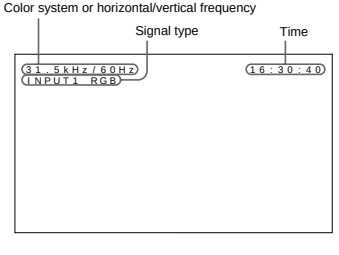
To display the information

Set DISPLAY to ON in step **2** above. The factory default is ON.

Note

You can display the input signal information and the time anytime by pressing the DISPLAY button on the Remote Commander, regardless of the above setting.

The input signal information list



Preset input signals			
	Signal name	Color system or horizontal/ vertical frequency	
	Computer signals		
1	VGA[a]-1 (VGA 350)	31.5kHz	70Hz
2	640×350@85Hz (VESA[b] STD)	37.9kHz	85Hz
3	640×400@85Hz (VESA STD)	37.9kHz	85Hz
4	640×480@60Hz (VESA STD)	31.5kHz	60Hz
5	Mac[c] 13"	35.0kHz	67Hz
6	640×480@72Hz (VESA STD)	37.9kHz	73Hz
7	640×480@75Hz (VESA STD)	37.5kHz	75Hz
8	640×480@85Hz (VESA STD)	43.3kHz	85Hz
9	852×480@60Hz (I/O DATA)[d]	31.7kHz	60Hz
10	VGA (VGA TEXT)	31.5kHz	70Hz
11	720×400@85Hz (VESA STD)	37.9kHz	85Hz
12	800×600@56Hz (VESA STD)	35.2kHz	56Hz
13	800×600@60Hz (VESA STD)	37.9kHz	60Hz
14	800×600@72Hz (VESA STD)	48.1kHz	72Hz
15	800×600@75Hz (VESA STD)	46.9kHz	75Hz

10	480/60p	480/60P	
11	1080/60i	1080/60I	
12	720/60p	720/60P	

a) VGA is a registered trademark of International Business Machines Corporation, U.S.A.
b) VESA is a registered trademark of the Video Electronics Standards Association.
c) Mac (Macintosh) is a registered trademark of Apple Computer, Inc.
d) This item is only available when you use a graphic accelerator board manufactured by I/O DATA Corporation.

Notes

- When inputting an HDTV signal, input the tri-level sync signal to the 2nd pin of the INPUT1 or INPUT2 (D-sub 15-pin) connector.
- When inputting a computer signal at the resolution shown in item No. 29, set H SIZE, H SHIFT, V SIZE and V SHIFT to the standard (00) and set ZOOM to ×1 in the PIC SIZE menu, or the picture might oscillate.

Actual on-screen display of the monitor status

On-screen display	Significance
31.5kHz / 60Hz (e.g.)	The selected input signal is computer RGB.
525 / 60 (e.g.)	The selected input signal is RGB or component video.
NTSC (e.g.)	The selected input signal is NTSC.
OTHERS	The input signal is out of the capture range.
NO SYNC	There is no input signal.
INPUT1 RGB	The signal mode of INPUT1 is set to RGB.
INPUT1 YUV	The signal mode of INPUT1 is set to component video.
VIDEO COMPOSITE	Composite video input is selected for VIDEO.
VIDEO Y/C	Y/C video input is selected for VIDEO.

Adjusting the Picture

While watching the picture, you can adjust contrast, brightness, chroma, phase, and so on, to suit your taste. The adjustments can be carried out for each input signal separately. You can also store the adjusted levels in memory.

Adjusting the Contrast, Brightness, Chroma, and Phase, etc.

Press MENU so that the main menu appears on the monitor screen and select “CONTRAST”, “BRIGHTNESS”, “CHROMA”, “PHASE”, “PICTURE AGC”, “COLOR TEMP” or “SHARPNESS” from the PIC CONTROL menu with ▲ / ▼.

CONTRAST

Select “CONTRAST” with ▲ / ▼ and press ENTER.
Adjust the contrast with ▲ / ▼ in the range from MIN (0) to MAX (+100).
▲: to increase picture contrast
▼: to decrease picture contrast

BRIGHTNESS

Select “BRIGHTNESS” with ▲ / ▼ and press ENTER.
Adjust the brightness with ▲ / ▼ in the range from MIN (–50) to MAX (+50).
▲: to make the picture brighter
▼: to make the picture darker

CHROMA

Select “CHROMA” with ▲ / ▼ and press ENTER.
Adjust the chroma with ▲ / ▼ in the range from MIN (–50) to MAX (+50).
▲: to increase color intensity
▼: to decrease color intensity

PHASE

Select “PHASE” with ▲ / ▼ and press ENTER.
Adjust the phase with ▲ / ▼ in the range from MIN (–50) to MAX (+50).
▲: to make the overall picture greenish
▼: to make the overall picture purplish

Automatic brightness control — Enhancing the image contrast

If the average brightness of the image is low, the system can automatically raise the contrast level to enhance the brightness. This function works well for displaying dark images.

Select “PICTURE AGC” with ▲ / ▼ and press ENTER.
Set PICTURE AGC to ON or OFF with ▲ / ▼.

COLOR TEMP (Color temperature)

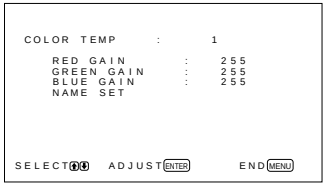
You can also set the color temperature. You can select HIGH or LOW, or adjust each gain more precisely. Up to six adjusted color temperatures can be registered. You can rename them (up to six characters in length).

1 Select “COLOR TEMP” with ▲ / ▼ and press ENTER.

2 Select the color temperature with ▲ / ▼ and press ENTER.
HIGH: to set the color temperature to high
LOW: to set the color temperature to low
1 – 6: to set the gain more precisely

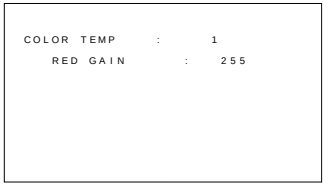
When you select HIGH or LOW, the menu returns to the PIC CONTROL menu.

When you select “1” to “6”
When you select “1” to “6”, the following menu appears on the monitor screen.



(1) Select a number to register with ▲ / ▼ and press ENTER.
The cursor (▶) appears on the monitor screen.

(2) Press ▲ / ▼ to move the cursor (▶) to the gain item that you want to set and press ENTER.
The following menu appears on the monitor screen.

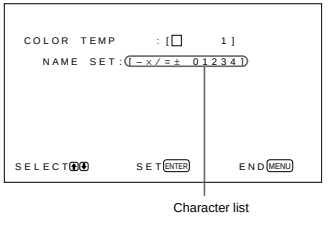


(3) Adjust the gain (10 to 255) with ▲ / ▼ and press MENU.
The menu returns to the COLOR TEMP menu.

(4) Repeat steps (2) and (3) to set the other gain items and press MENU.
The menu returns to the COLOR TEMP menu.

When you rename the adjusted color temperature, follow the steps below.

(5) Press ▲ / ▼ to move the cursor (▶) to “NAME SET” and press ENTER.
The following menu appears on the monitor screen.



(6) Select the character to be changed with ▲ / ▼ and press ENTER.
The background of a character in the character list changes to cyan.

(7) Select a character in the character list with ▲ / ▼ and press ENTER.
The selected character is input.

(8) Repeat steps (6) and (7) until you finish inputting the name, then press MENU.
The menu returns to the COLOR TEMP menu.

SHARPNESS

You can change the outline correction level to one of three levels (HIGH, MID or LOW).

1 Press ▲ / ▼ to move the cursor (▶) to “SHARPNESS” and press ENTER.

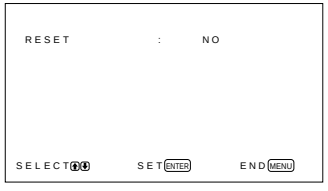
2 Select the outline correction level with ▲ / ▼ and press ENTER.
HIGH: sharper picture
MID: standard value
LOW: softer picture

Notes

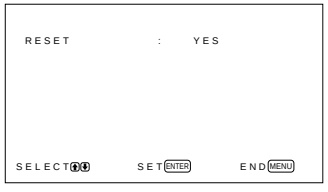
- CHROMA and PHASE controls do not function with an RGB signal.
- PHASE control does not function with a component signal.
- PHASE control does not function with a PAL or SECAM color source.
- Do not change the CHROMA/PHASE (NTSC only) level when the selected signal is black-and-white. Although it has no effect on the current picture, it does affect the picture of color signals such as NTSC or PAL which may be input later.

Restoring the PIC CONTROL Menu Items to Their Original Settings

1 In the PIC CONTROL menu, Press ▲ / ▼ to move the cursor (▶) to “RESET” and press ENTER.
The following menu appears on the monitor screen.



2 Press ▲ / ▼.
"NO" changes to "YES".



3 Press ENTER.
The PIC CONTROL menu items are restored.

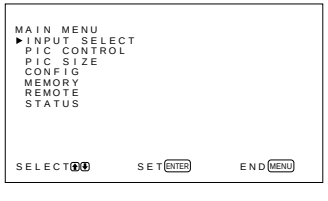
To cancel the reset function
Press MENU before pressing ENTER.

Resizing and Positioning the Picture

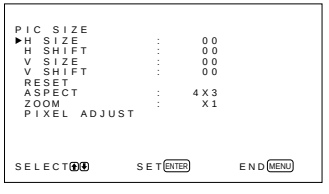
You can shift the position of the picture so that it fits the screen, or adjust the vertical and horizontal size of the picture separately.

Resizing the Picture

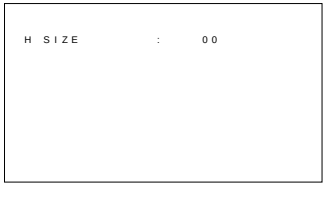
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (►) to "PIC SIZE" and press ENTER.
The PIC SIZE menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (►) to "H SIZE" and press ENTER.
The following menu appears on the monitor screen.

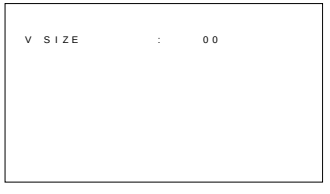


4 Press ▲ / ▼ to resize the picture.
▲: to increase the horizontal size
▼: to reduce the horizontal size
The horizontal picture size is indicated on the monitor screen in the range from MIN (–50) to MAX (+50). The factory preset value is 00.

Note
The lower limit of the setting may be above the MIN depending on the input signal type.

5 Press ENTER.
The menu returns to the PIC SIZE menu.

6 Press ▲ / ▼ to move the cursor (►) to "V SIZE" and press ENTER.
The following menu appears on the monitor screen.

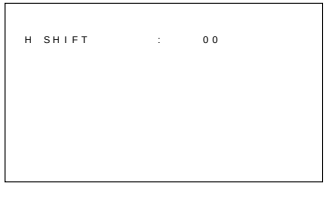


7 Press ▲ / ▼ to resize the picture.
▲: to increase the vertical size
▼: to reduce the vertical size
The vertical picture size is indicated on the monitor screen in the range from MIN (–50) to MAX (+50). The factory preset value is 00.

8 Press ENTER.
The menu returns to the PIC SIZE menu.

Adjusting the Picture Position

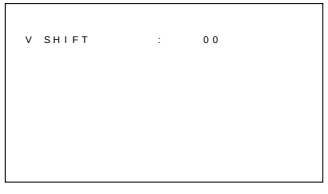
1 In the PIC SIZE menu, press ▲ / ▼ to move the cursor (►) to "H SHIFT" and press ENTER.
The following menu appears on the monitor screen.



2 Press ▲ / ▼ to shift the picture.
▲: to shift the picture to the right
▼: to shift the picture to the left
The horizontal picture position is indicated on the monitor screen in the range from MIN (–50) to MAX (+50). The factory preset value is 00.

3 Press ENTER.
The menu returns to the PIC SIZE menu.

4 Press ▲ / ▼ to move the cursor (►) to "V SHIFT" and press ENTER.
The following menu appears on the monitor screen.

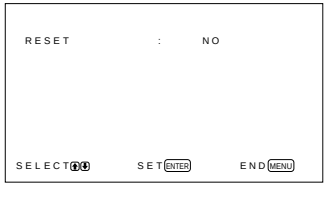


5 Press ▲ / ▼ to shift the picture.
▲: to shift the picture upward
▼: to shift the picture downward
The vertical picture position is indicated on the monitor screen in the range from MIN (–50) to MAX (+50). The factory preset value is 00.

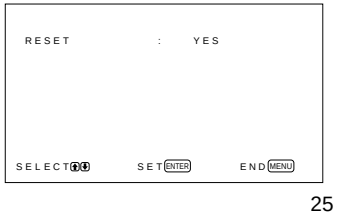
6 Press ENTER.
The menu returns to the PIC SIZE menu.

Restoring the Original Picture Size and Position

1 In the PIC SIZE menu, press ▲ / ▼ to move the cursor (►) to "RESET" and press ENTER.
The following menu appears on the monitor screen.



2 Press ▲ / ▼.
"NO" changes to "YES".



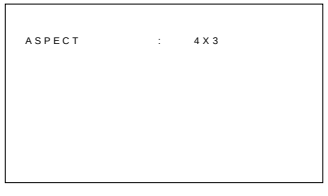
3 Press ENTER.
The original picture size and position are restored.

To cancel the reset function
Press MENU before pressing ENTER.

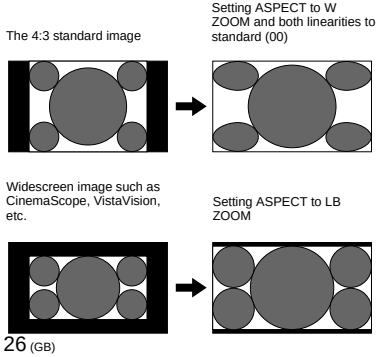
Changing the Aspect Ratio

This monitor can display images in various aspect ratios, such as the normal 4:3 TV program ratio, a widescreen image, etc. That means you can choose a suitable aspect ratio to display images.

1 In the PIC SIZE menu, press ▲ / ▼ to move the cursor (►) to “ASPECT” and press ENTER.
The following menu appears on the monitor screen.



2 Select an aspect ratio item with ▲ / ▼ and press ENTER.
4×3: to display a standard 4:3 image
16×9: to display a 16:9 widescreen image
W ZOOM: to enlarge a 4:3 image to a 16:9 screen naturally as illustrated below
LB (letterbox) ZOOM: to enlarge images in various aspect ratios to fit proportionally to the left and right sides of the screen as illustrated below



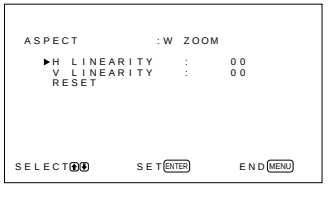
Notes

- If you select W ZOOM or LB ZOOM, it is recommended that you set the H SIZE, H SHIFT, V SIZE and V SHIFT to the standard (00) . If you change them too much, a W ZOOM or LB ZOOM display may be distorted. Before you select W ZOOM or LB ZOOM, set ZOOM to ×1. If ZOOM is set to ×2, ×3 or ×4, W ZOOM or LB ZOOM cannot be selected.
- Black bands may display at the top and bottom of the screen depending on the input signal type.

Adjusting the Linearities

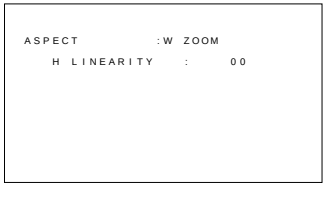
When you select W ZOOM for ASPECT, you can change the linearities by adjusting the H LINEARITY and V LINEARITY settings.

1 In the ASPECT menu, press ▲ / ▼ to move the cursor (►) to “W ZOOM” and press ENTER.
The following menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (►) to “H LINEARITY” or “V LINEARITY” and press ENTER.
H LINEARITY: to change the linearity in the horizontal direction
V LINEARITY: to change the linearity in the vertical direction

The following menu appears on the monitor screen. (The illustration below is for selecting H LINEARITY.)



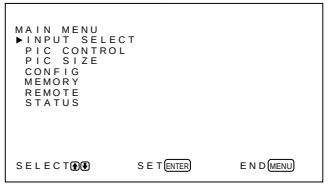
3 Adjust the linearity with ▲ / ▼.

To restore wide zoom mode items to their original settings
In the ASPECT menu, select W ZOOM and press ENTER. Press ▲ / ▼ to move the cursor (►) to “RESET” and press ENTER. Then select YES with ▲ / ▼ and press ENTER.

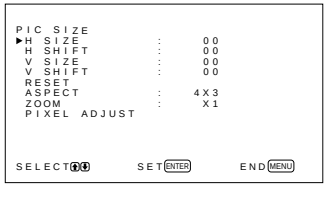
Adjusting the Pixels

If there is too much noise on the edges of the characters or the vertical lines, you can adjust the dot phase and the total number of horizontal pixels.

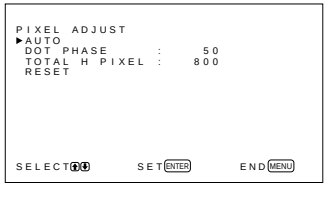
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (►) to “PIC SIZE” and press ENTER.
The PIC SIZE menu appears on the monitor screen.



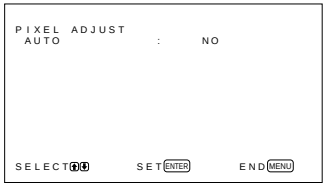
3 Press ▲ / ▼ to move the cursor (►) to “PIXEL ADJUST” and press ENTER.
The following menu appears on the monitor screen.



4 You can adjust the dot phase and the total number of horizontal pixels automatically or manually.

Adjusting automatically

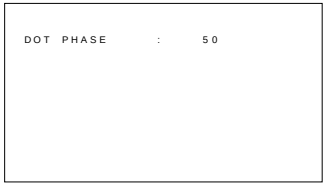
(1) Select AUTO with ▲ / ▼ and press ENTER.
The following menu appears on the monitor screen.



(2) Select YES with ▲ / ▼ and press ENTER.
The dot phase and the total number of horizontal pixels are adjusted automatically.

Adjusting manually

(1) Select DOT PHASE or TOTAL H PIXEL with ▲ / ▼ and press ENTER.
The following menu appears on the monitor screen. (The illustration below is for selecting DOT PHASE.)



(2) Adjust the dot phase or the total number of horizontal pixels with ▲ / ▼ and press ENTER.

To restore PIXEL ADJUST menu items to their original settings

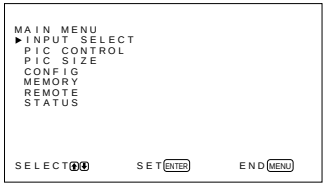
In the PIXEL ADJUST menu, press ▲ / ▼ to move the cursor (▶) to “RESET” and press ENTER. Then select YES with ▲ / ▼ and press ENTER.

Using the Memory Function

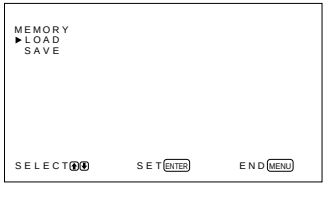
You can save the current picture setting for each input signal using the MEMORY function. The saved settings can be restored whenever necessary. The items in the PIC CONTROL and PIC SIZE menus can be memorized. You can save the picture settings of up to twenty input signals. You can name the settings of the items (up to 10 characters in length).

Storing the Current Setting

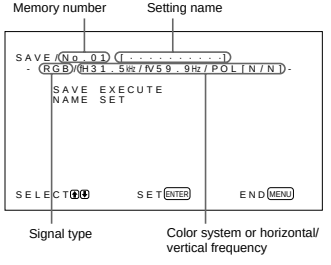
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (▶) to “MEMORY” and press ENTER.
The MEMORY menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (▶) to “SAVE” and press ENTER.
The following menu appears on the monitor screen.

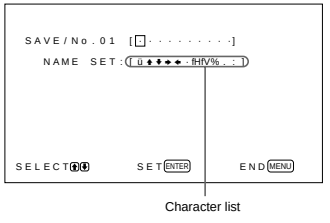


If there is no data in the selected memory number, the “– – EMPTY – –” message appears on the monitor screen in cyan. The signal type and the color system or horizontal/vertical frequency are displayed in cyan (showing that the signal type of the selected memory number is the same as that of the current setting) or in yellow (showing that the signal type of the selected memory number is not the same as that of the current setting).

4 Select a memory number (01 to 20) with ▲ / ▼ and press ENTER.
The cursor (▶) appears on the monitor screen.

5 Press ▲ / ▼ to move the cursor (▶) to “SAVE EXECUTE” and press ENTER.
The current data is stored under the selected memory number. The “SAVE COMPLETED” message appears for about five seconds.
When you name the setting, follow the steps below.

6 Press ENTER, then press ▲ / ▼ to move the cursor (▶) to “NAME SET” and press ENTER again.
The following menu appears on the monitor screen.



7 Select the character to be changed with ▲ / ▼ and press ENTER.
The background of a character in the character list changes to cyan.

8 Select a character in the character list with ▲ / ▼ and press ENTER.
The selected character is input.

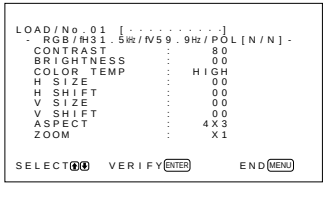
9 Repeat steps **7** and **8** until you finish inputting the name, then press MENU.
The menu returns to the SAVE menu.

Note

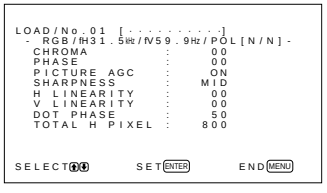
If the storing of the setting fails, the “SAVE ERROR” message appears on the monitor screen. Try to store the setting again.

Calling Up a Stored Setting

1 In the MEMORY menu, press ▲ / ▼ to move the cursor (▶) to “LOAD” and press ENTER.
The first page of the stored settings appears on the monitor screen.



2 Select a memory number (01 to 20) with ▲ / ▼ and press ENTER.
The second page of the stored settings appears on the monitor screen.



The signal type and the color system or horizontal/vertical frequency are displayed in cyan (showing that the signal type of the selected memory number is the same as that of the current setting and you can call up the stored setting) or in red (showing that the signal type of the selected memory number is not the same as that of the current setting and you cannot call up the stored setting).

3 Press ENTER.
The "LOAD COMPLETED" message appears for about five seconds and the picture is adjusted to the selected setting.

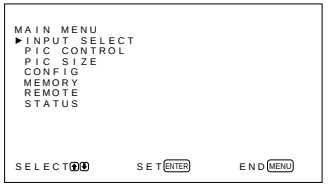
Note

If the loading fails, the "LOAD ERROR" message appears on the monitor screen. Try to load the setting again.

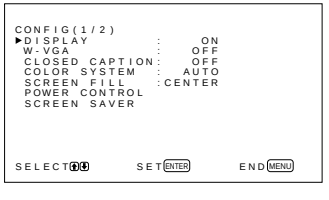
Selecting the On-screen Language

You can select the on-screen language from among English, German, French, Italian, Spanish or Japanese.

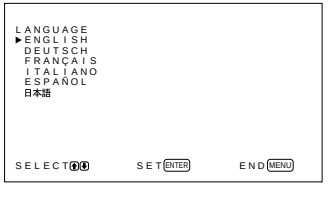
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (►) to "CONFIG" and press ENTER.
The CONFIG (1/2) menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (►) to "LANGUAGE" on the CONFIG (2/2) menu and press ENTER.
The following menu appears on the monitor screen.



4 Press ▲ / ▼ to move the cursor (►) to the desired language and press ENTER.
The on-screen language is switched to the one you selected.
ENGLISH: English
DEUTSCH: German
FRANÇAIS: French
ITALIANO: Italian
ESPAÑOL: Spanish
日本語**:** Japanese

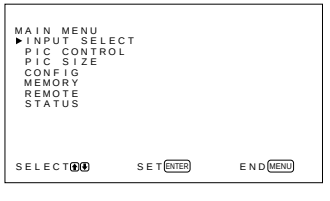
5 Press MENU.
The menu returns to the CONFIG (2/2) menu.

Reducing Afterimage/ Ghosting (Screen Saver Function)

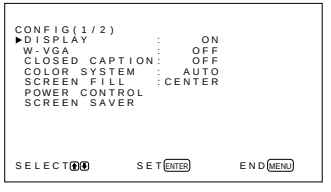
If a bright image that does not change is displayed on a screen (e.g., a PC screen) for a long time, an afterimage (ghosting) may occur. To reduce this afterimage, this monitor has a screen saver function. The screen saver function has two screen savers. One screen saver reverses the image (PIC INVERSION) while the other automatically changes the display position (PIC ORBITING).

Reversing the Image

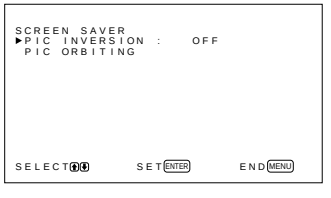
1 Press MENU.
The main menu appears on the monitor screen.



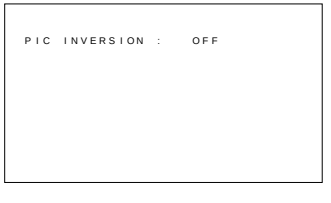
2 Press ▲ / ▼ to move the cursor (►) to "CONFIG" and press ENTER.
The CONFIG (1/2) menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (►) to "SCREEN SAVER" and press ENTER.
The following menu appears on the monitor screen.

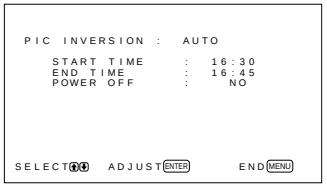


4 Press ▲ / ▼ to move the cursor (►) to "PIC INVERSION" and press ENTER.
The following menu appears on the monitor screen.



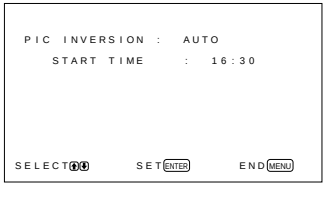
5 Select the PIC INVERSION mode with ▲ / ▼.
OFF: to set the PIC INVERSION to OFF
ON: to set the PIC INVERSION to ON
AUTO: Carry out the PIC INVERSION process once a day.

When you select AUTO, the following menu appears.



(1) Press ENTER.
The cursor (▶) appears on the monitor screen.

(2) Press ▲ / ▼ to move the cursor (▶) to "START TIME" and press ENTER.
The following menu appears and the background of the hour is displayed in cyan.



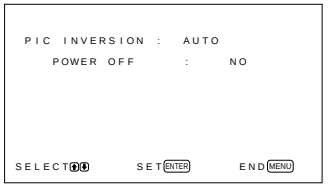
(3) Set the hour when the image is to be reversed with ▲ / ▼ and press ENTER.
The setting for the hour is entered and the background of the minute is displayed in cyan.

(4) Set the minute with ▲ / ▼ and press MENU.
The setting for the minute is entered and the menu returns to the PIC INVERSION menu.

(5) Similarly, set the time when the PIC INVERSION function is to be cancelled.
The display will be reversed at the START TIME and will return to the original display at the END TIME. This cycle is carried out automatically once a day.

To set the change to the standby mode at the END TIME

1 After selecting AUTO for PIC INVERSION mode, select POWER OFF and press ENTER.
The following menu appears on the monitor screen.



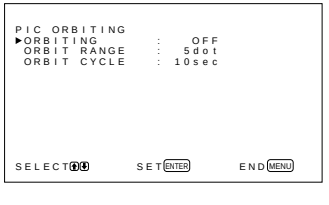
2 Select YES with ▲ / ▼ and press MENU.
The monitor changes to standby mode at the designated END TIME.

Notes

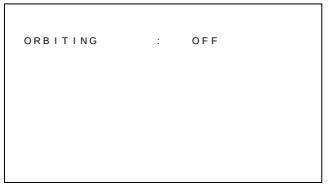
- The power off function, power saving function and on/off timer function in the POWER CONTROL menu cannot be used simultaneously. When one of those functions is set to ON (YES), "– – – –" appears next to the others and their functions are not available.
- If you set START TIME and END TIME to the same time, the setting of START TIME takes priority over that of END TIME. The display does not return to the original display at the END TIME.

Changing the Display Position Automatically

1 In the SCREEN SAVER menu, press ▲ / ▼ to move the cursor (▶) to "PIC ORBITING" and press ENTER.
The following menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (▶) to "ORBITING" and press ENTER.
The following menu appears on the monitor screen.

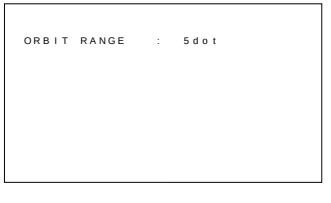


3 Select the ORBITING mode with ▲ / ▼.
OFF: Cancel the PIC ORBITING function.
ON: Set the PIC ORBITING function.

4 Press MENU.
The menu returns to the PIC ORBITING menu.

5 Select ORBIT RANGE (moving distance) or ORBIT CYCLE (time) with ▲ / ▼ and press ENTER.
The following values can be selected:
ORBIT RANGE: 5dot, 10dot, 15dot, 20dot
ORBIT CYCLE: 10sec, 30sec, 1min, 5min

The following menu appears on the monitor screen. (The illustration below is for selecting ORBIT RANGE.)



6 Adjust the ORBIT RANGE or ORBIT CYCLE with ▲ / ▼ and press MENU.

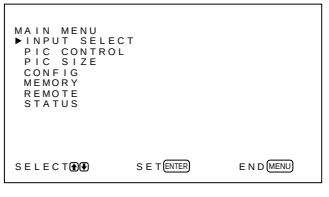
When both PIC INVERSION and PIC ORBITING are set to ON
If the PIC ORBITING function is actuated while the picture is reversed, the reversed picture is displayed changing position.

Controlling Power On/Off Automatically (Power Control Function)

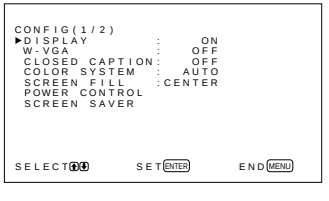
This monitor has two power controlling functions. You can set it to turn off the power automatically after a certain period if there is no input signal from the INPUT1 or INPUT2 connectors (POWER SAVING function). You can set the time when the power automatically turns on/off (ON/OFF TIMER function).

Power Saving Function

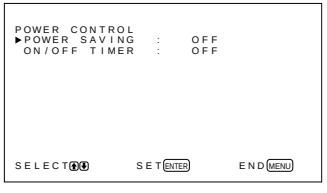
1 Press MENU.
The main menu appears on the monitor screen.



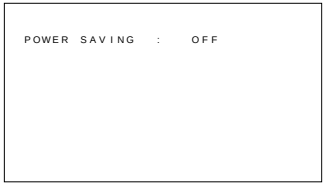
2 Press ▲ / ▼ to move the cursor (▶) to "CONFIG" and press ENTER.
The CONFIG (1/2) menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (▶) to “POWER CONTROL” and press ENTER.
The following menu appears on the monitor screen.



4 Press ▲ / ▼ to move the cursor (▶) to “POWER SAVING” and press ENTER.
The following menu appears on the monitor screen.



5 Press ▲ / ▼ to select the length of time until the change to power saving mode.
OFF: The power saving function does not work.
5min: Changes to the power saving mode after five minutes if there is no input signal.
10min: Changes to the power saving mode after 10 minutes if there is no input signal.

The ON indicator flashes when the unit is in the power saving mode.

To cancel the power saving function

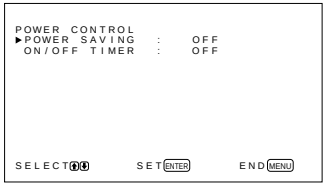
- Input the sync signal again.
- Press the ⏻ switch on the ⏻ (standby) switch / indicator section or the POWER ON switch on the Remote Commander.

Signal specification for using the power saving function

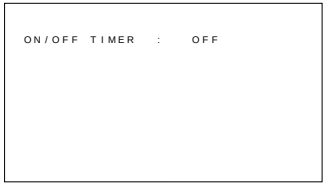
The sync signal should be connected to the 13th pin of the RGB/YUV (D-sub 15-pin) connector in the INPUT1 or INPUT2 connectors.

On/Off Timer Function

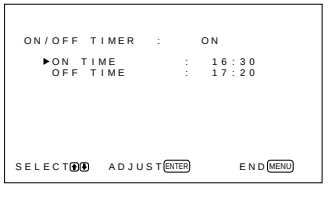
1 In the CONFIG (1/2) menu, Press ▲ / ▼ to move the cursor (▶) to “POWER CONTROL” and press ENTER.
The following menu appears on the monitor screen.



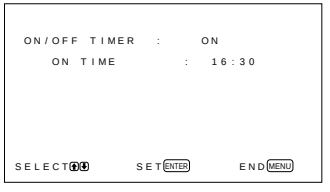
2 Press ▲ / ▼ to move the cursor (▶) to “ON/OFF TIMER” and press ENTER.
The following menu appears on the monitor screen.



3 Select ON with ▲ / ▼ and press ENTER.
The following menu appears on the monitor screen.



4 Press ▲ / ▼ to move the cursor (▶) to “ON TIME” and press ENTER.
The following menu appears and the background of the hour is displayed in cyan.



5 Set the hour with ▲ / ▼ and press ENTER.
The setting for the hour is entered and the background of the minute is displayed in cyan.

6 Set the minute with ▲ / ▼ and press MENU.
The setting for the minute is entered and the menu returns to the ON/OFF TIMER menu.

7 Similarly, set the OFF TIME.

The ON indicator flashes when the OFF TIME is reached, and the monitor turns off.

Notes

- The power saving function does not work when the signal is input from the VIDEO connectors.
- If the sync signal is not connected to the 13th pin of the RGB/YUV (D-sub 15-pin) connector in the INPUT1 or INPUT2 connectors, the monitor does not turn on even if the sync signal is input. Be sure to set POWER SAVING to OFF when only an RGB signal is connected.
- The power saving function, on/off timer function and power off function in the PIC INVERSION mode cannot be used simultaneously. When one of those functions is set to ON (YES), “– – – –” appears next to the others and their functions are not available.
- If you set ON TIME and OFF TIME to the same time, the setting of ON TIME takes priority over that of OFF TIME. The monitor does not turn off at the OFF TIME.

Self-diagnosis Function

The unit has a self-diagnosis function.
This function displays the monitor’s condition based on the pattern shown by the flashing of the STANDBY indicator. The flashing pattern informs you of the monitor’s current condition.
If the STANDBY indicator flashes, check the number of flashes and contact your authorized Sony dealer.

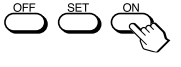
1 Check the flashing pattern of the STANDBY indicator.
The indicator flashes (with an image showing on the monitor) or flashes at intervals of three seconds (with no image showing on the monitor). Count the number of flashes if the indicator flashes at intervals of three seconds. For example, the indicator flashes twice, followed by a three second pause, two more flashes and this pattern repeats. In this case, the count for the number of flashes is two.

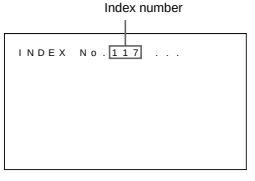
2 Unplug the unit.
Inform your authorized Sony dealer of the number of flashes.

Operating a Specific Monitor With the Remote Commander

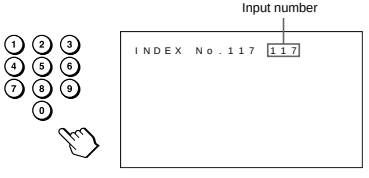
Using the supplied Remote Commander, you can operate a specific monitor without affecting other monitors that are installed at the same time.

1 Press ID MODE ON on the Remote Commander.
Monitor index numbers appear in white characters on all the monitors. (Every monitor is allocated an individual preset index number from 1 to 255.)
See “To change the index number” in the right-hand column on the next page to change the index number.

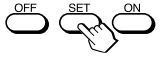




2 Input the index number of the monitor you want to operate using the 0 – 9 buttons on the Remote Commander.
The input number appears right next to the index number of each monitor.

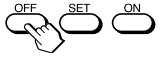


3 Press ID MODE SET.
The character on the selected monitor changes to cyan while the others change to red.



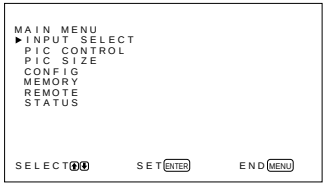
You can operate only the monitor specified. (All operations are available in ID mode except power on/off.)

4 After the necessary adjustment, press ID MODE OFF.
The monitor returns to the normal mode.

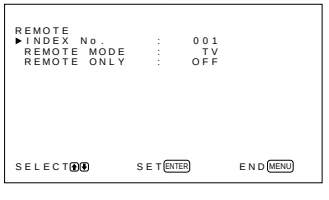


To change the index number
You can change the index number if necessary.
When you change the number, use the buttons on the control button section of the monitor.

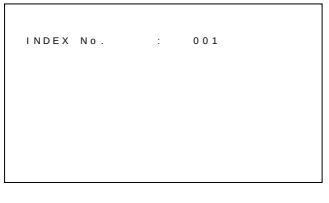
1 Press MENU.
The main menu appears on the monitor screen.



2 Press ▲ / ▼ to move the cursor (►) to “REMOTE” and press ENTER.
The REMOTE menu appears on the monitor screen.



3 Press ▲ / ▼ to move the cursor (►) to “INDEX No.” and press ENTER.
The following menu appears on the monitor screen.



4 Select the index number with ▲ / ▼ and press ENTER.
The menu returns to the REMOTE menu.

Using Other Remote Commander Models

The following operations can be carried out using other Remote Commander models.
• Power on/off
• Input selection
• Menu operations
• Picture adjustments: contrast, phase and chroma
• On-screen display on/off

The operations available and the buttons to be used for each operation are limited depending on each Remote Commander. See the table below.

Remote Commander model		**RM-854**	**RM-921**	**RM-1271**	**RM-PJ1292**	**RM-PJ1000**
REMOTE MODE setting		**TV**	**TV**	**PJ**	**PJ**	**PJ**
Input selection	INPUT1	RGB	RGB1	A	A	A
	INPUT2	—	RGB2	B	B	B
	VIDEO	LINE1	LINE	VIDEO	VIDEO	VIDEO
Menu operation	MENU	MENU	MENU	PAGE or ←	PAGE or ←	MENU or ←

Specifications

Video processing

Preset signal	*See page 21 (GB).*
Sampling rate	13.5 MHz to 140 MHz
Panel system	AC-type Plasma Display Panel
Display resolution	1 024 dots (horizontal) × 1 024 lines (vertical)
Pixel pitch	0.90 (horizontal) × 0.51 (vertical) mm (1/16 × 1/32 inches)
Picture size	921 (horizontal) × 522 (vertical) mm (36 3/8 × 20 5/8 inches)
Panel size	42-inch (diagonal 1 058 mm)

Inputs and Outputs

INPUT1/INPUT2

RGB/YUV	D-sub 15-pin (female) *(See "Pin assignment" on page 39 (GB).)*
AUDIO	Stereo minijack 500 mVrms, high impedance

VIDEO (NTSC, PAL, SECAM, NTSC4.43, PAL60, PAL-M)[1)]

COMPOSITE IN	BNC-type (×1) Composite video, 1 Vp-p ±2 dB sync negative, 75-ohm (automatic termination)
Y/C IN	Mini DIN 4-pin type (×1) Y (luminance): 1 Vp-p ±2 dB sync negative, 75 ohms terminated C (chrominance): Burst 0.286 Vp-p ±2 dB (NTSC), 75 ohms terminated Burst 0.3 Vp-p ±2 dB (PAL), 75 ohms terminated
AUDIO IN	Stereo minijack 500 mVrms, high impedance
COMPOSITE OUT	BNC-type (×1) Loop-through
AUDIO OUT	Stereo minijack 500 mVrms, high impedance
REMOTE (RS-232C)	D-sub 9-pin type (×1)
Safety regulations	UL1950, CSA No. 950 (c-UL), FCC Class B, IC Class B, EN60 950 (NEMKO), CE, C-Tick

General

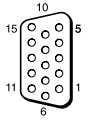
Power requirements	100 V to 240 V AC, 50/60 Hz, 4.5 A to 1.8 A
Power consumption	400 W
Operating conditions	Temperature: 0 °C to 35 °C (32 °F to 95 °F) Humidity: 20% to 90% (no condensation) Atmospheric pressure: 700 to 1 060 hPa
Storing/transporting conditions	Temperature: –10 °C to +40 °C (14 °F to 104 °F) Humidity: 20% to 90% (no condensation) Atmospheric pressure: 700 to 1 060 hPa
Dimensions	1 032 × 630 × 83 mm (40 3/4 × 24 7/8 × 3 3/8 inches) (w/h/d, excluding projections)
Mass	29.4 kg (64 lb 13 oz)
Supplied accessories	AC power cord (1) AC plug holder (2) Remote Commander RM-42B (1) Size AA (R6) batteries (2) Operating instructions (1)
Optional accessories	Monitor stand SU-42B Video input adaptor BKM-B10 (for the PFM-42B1E only)

Design and specifications are subject to change without notice.

1) The PFM-42B1E is not equipped with VIDEO connectors. For the PFM-42B1E, composite video and Y/C input can be input to the monitor when the BKM-B10 video input adaptor (not supplied) is installed in the monitor.

Pin assignment

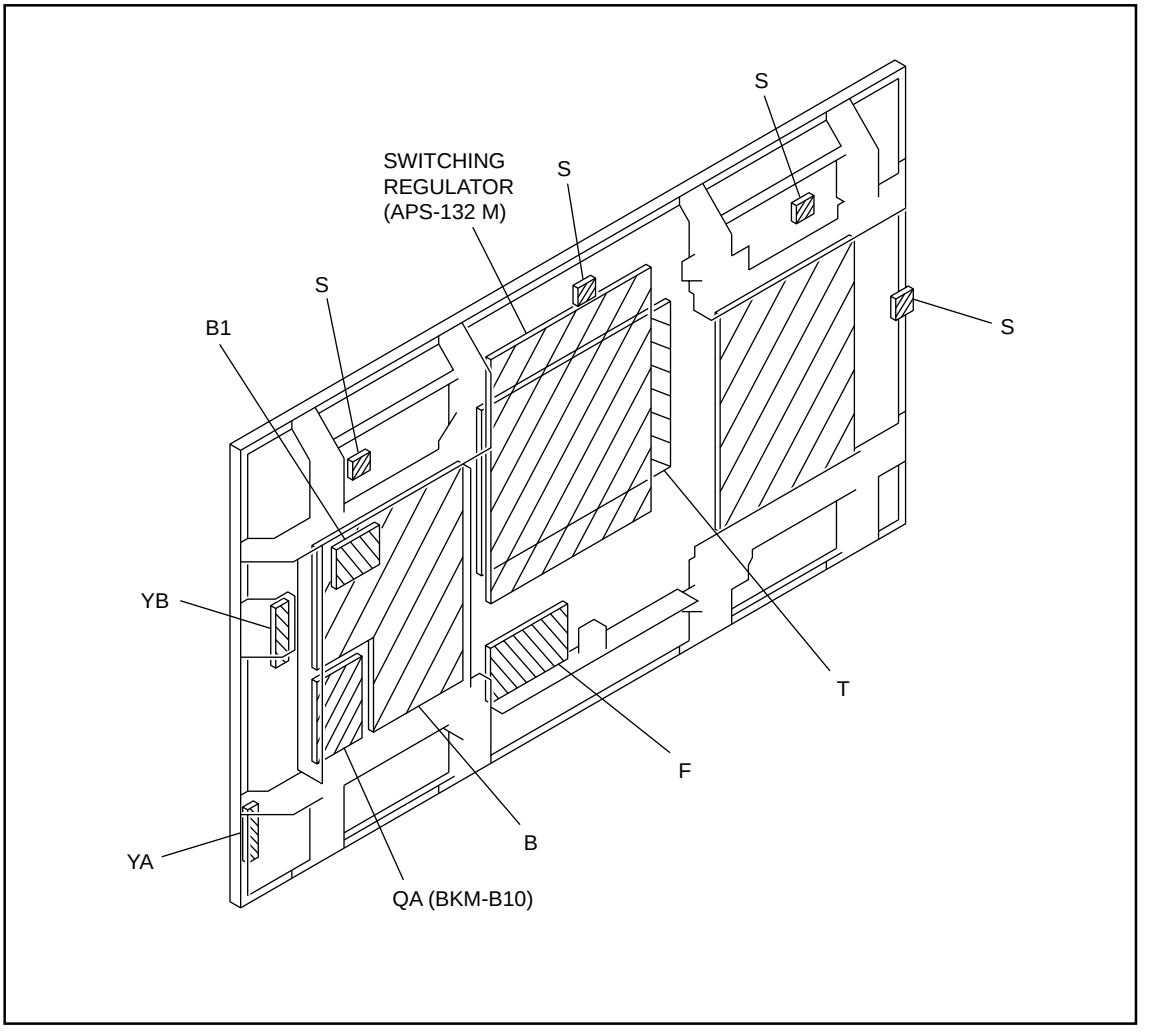
RGB/YUV connector (D-sub 15-pin)



Pin No.	Signal
1	Red video or R-Y or P_R
2	Green video or Y
3	Blue video or B-Y or P_B
4	Ground
5	Ground
6	Red ground
7	Green ground
8	Blue ground
9	Not used
10	Ground
11	Ground
12	SDA
13	H sync or composite sync
14	V sync
15	SCL

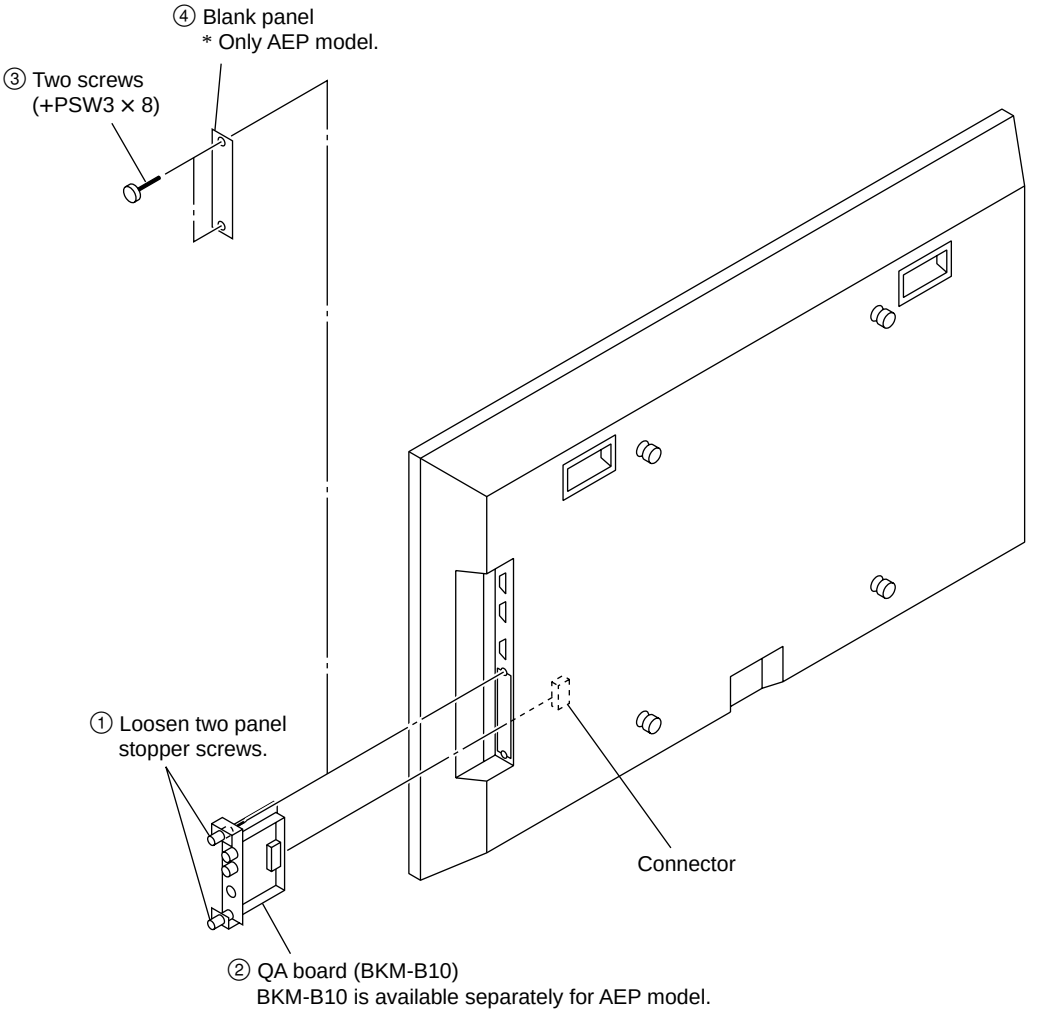
Section 2
Service Informations

2-1. Board Layout

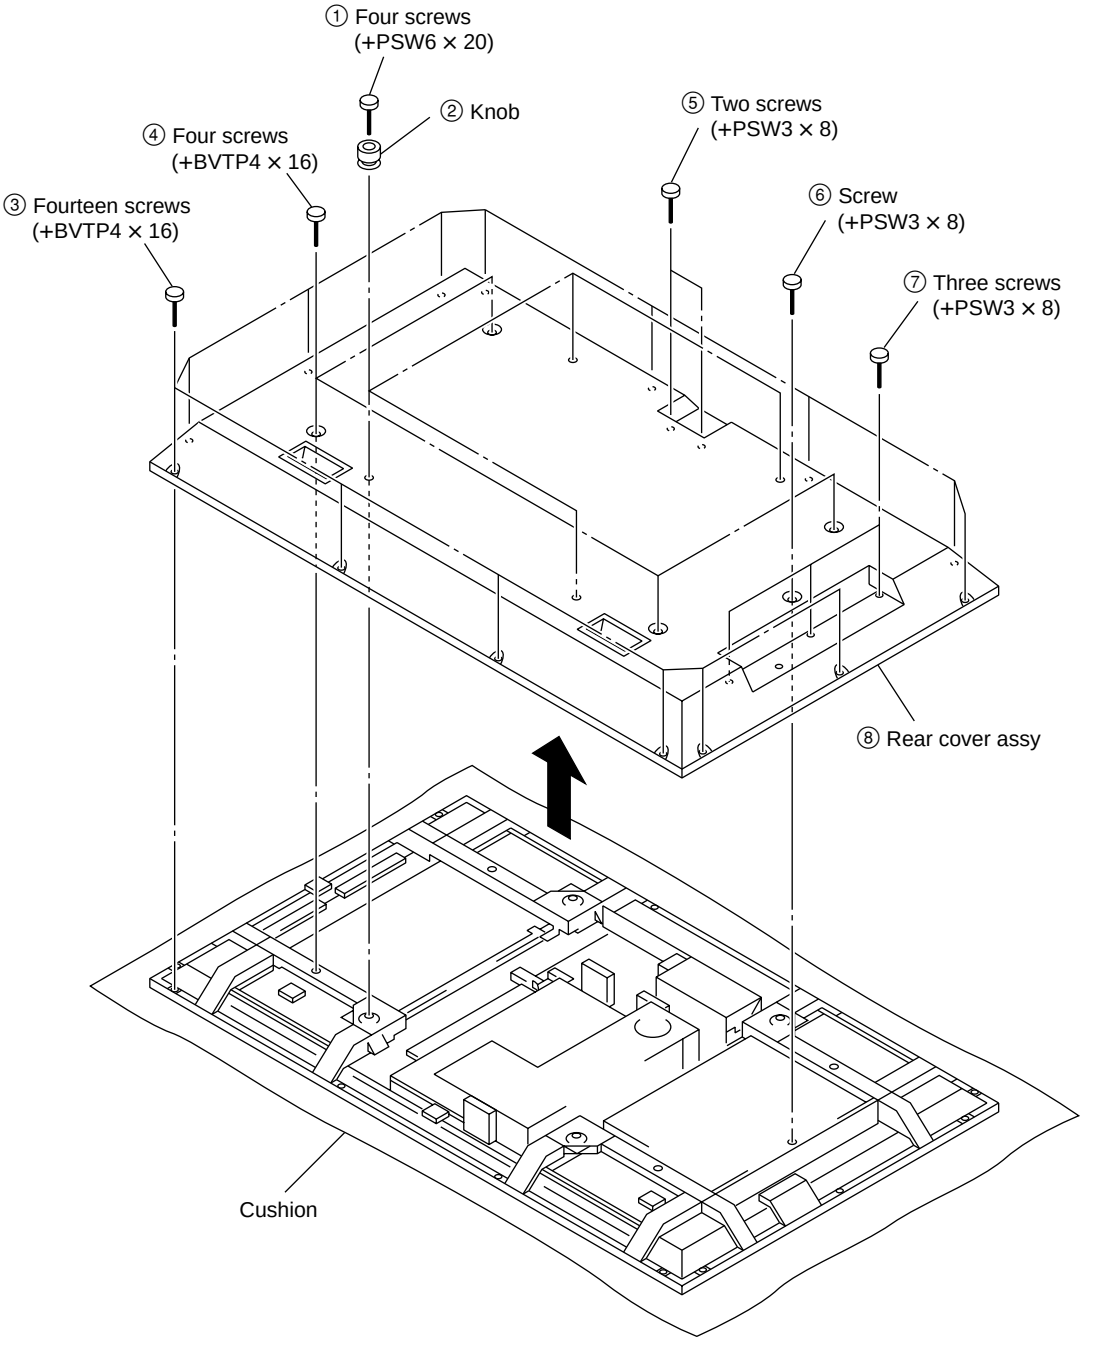


2-2. Disassembly

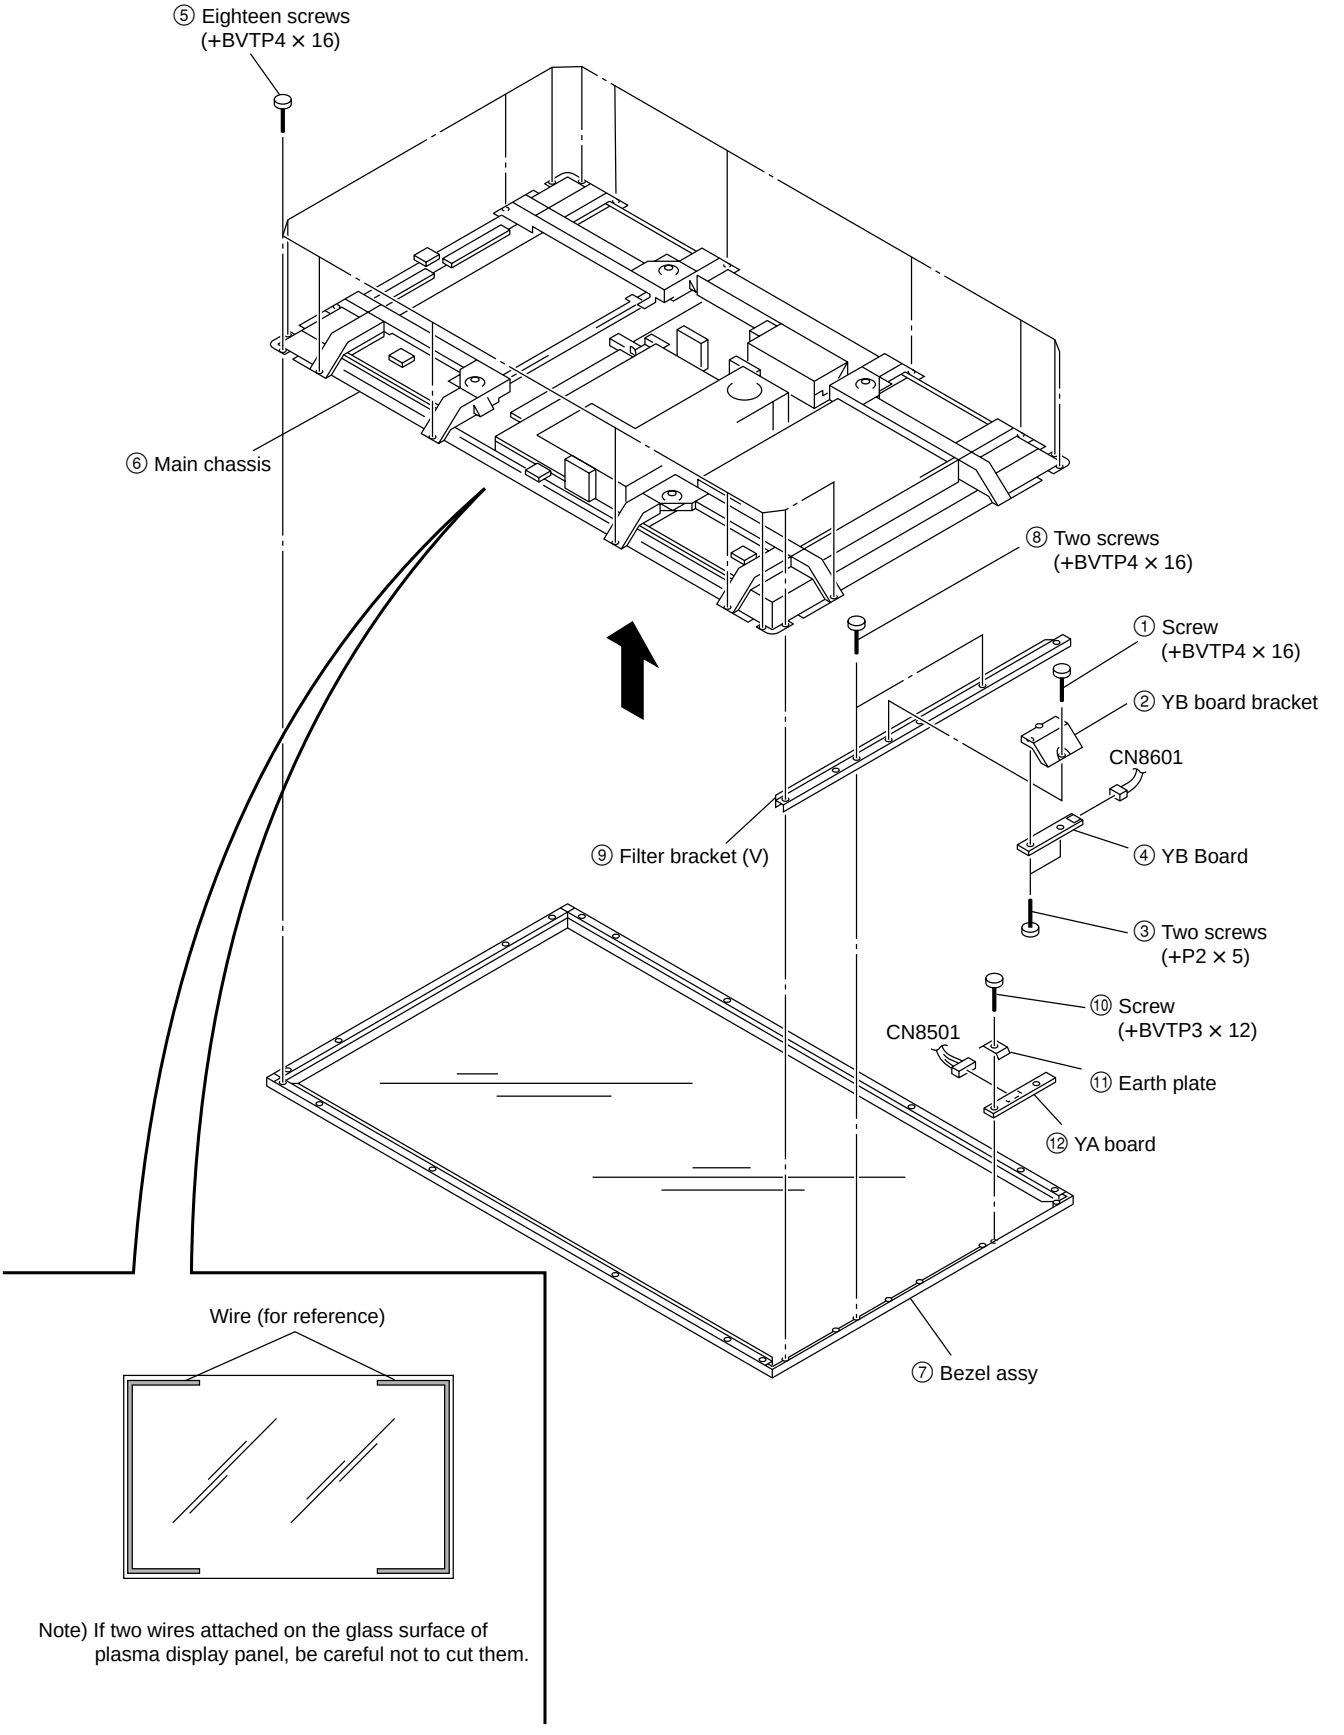
2-2-1. QA Board (BKM-B10) Removal



2-2-2. Rear Cover Assy Removal

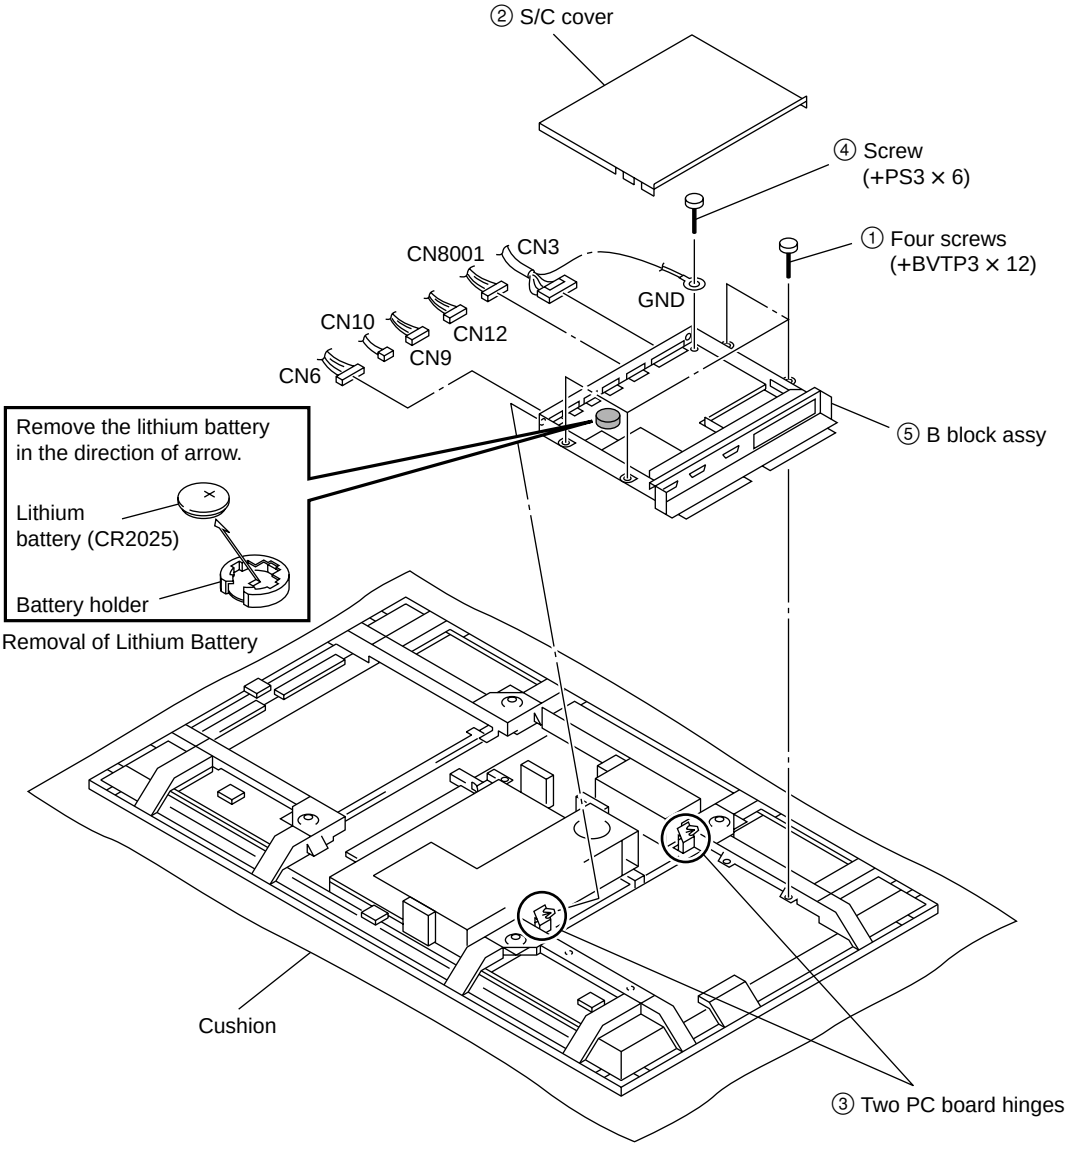


2-2-3. Bezel Assy and YA, YB Boards Removal



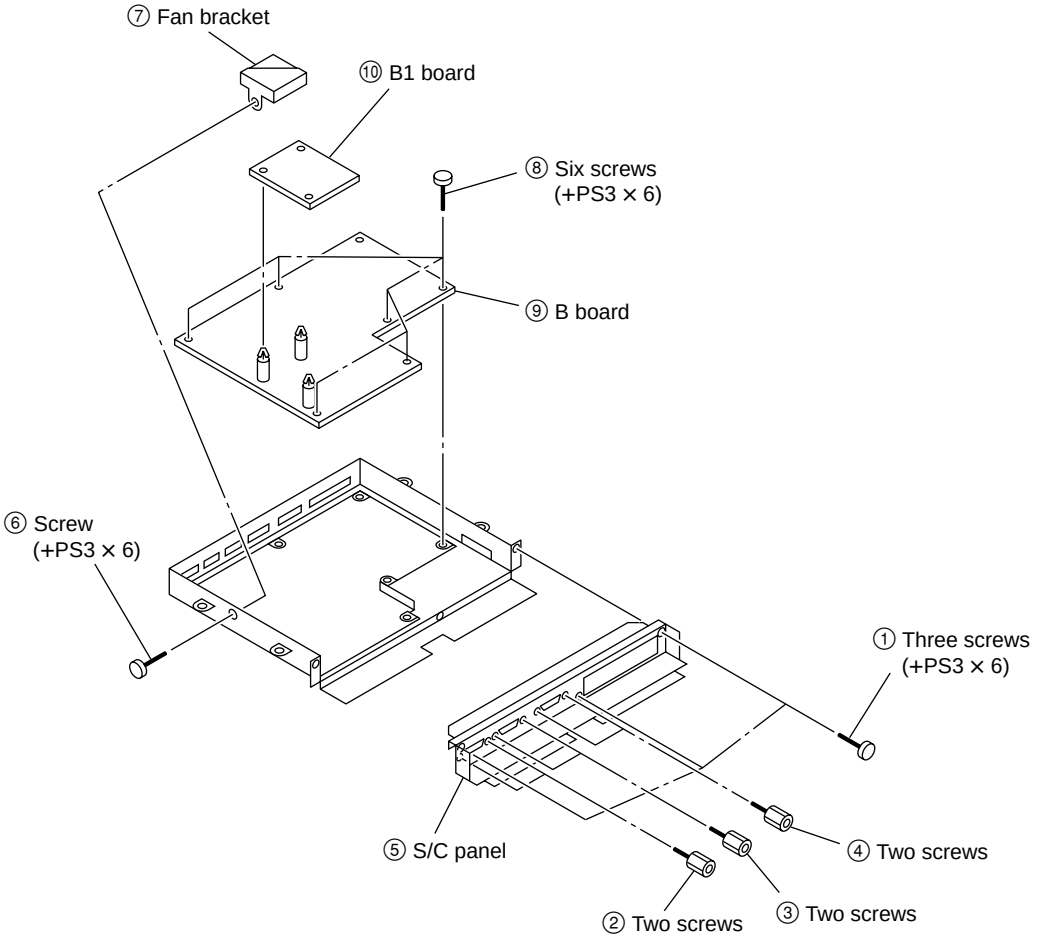
Note) If two wires attached on the glass surface of plasma display panel, be careful not to cut them.

2-2-4. B Block Assy Removal

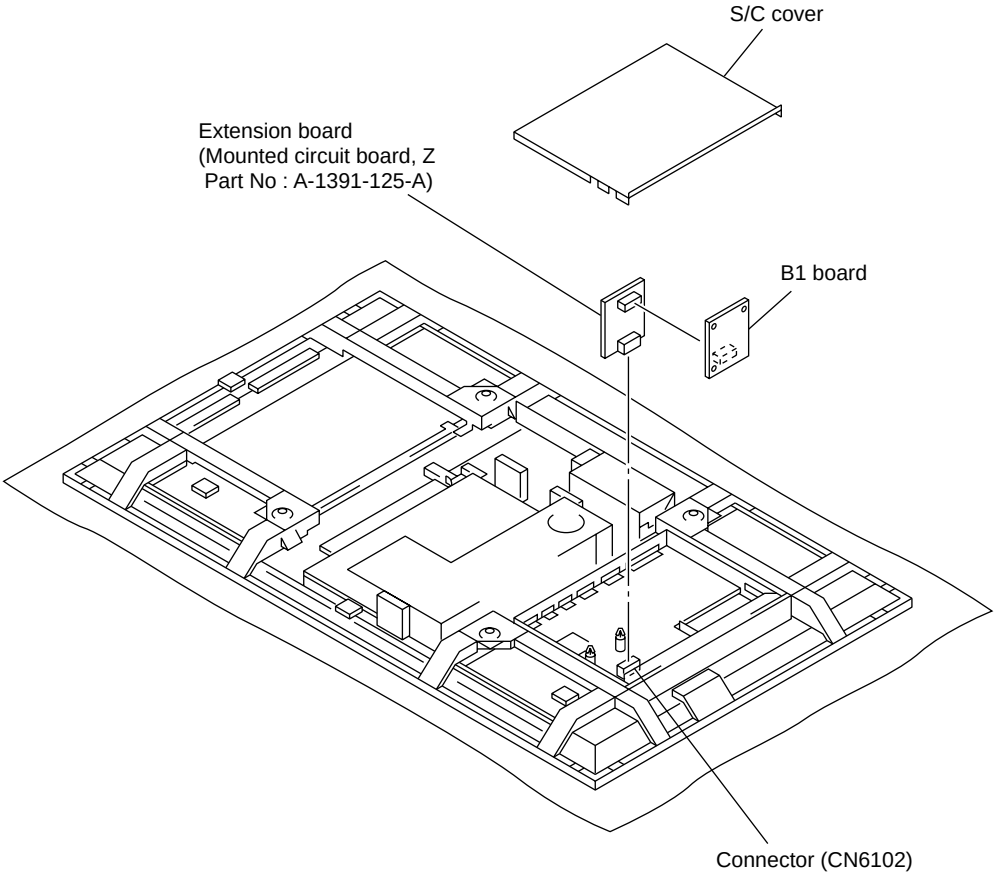


2-2-5. B and B1 Boards Removal

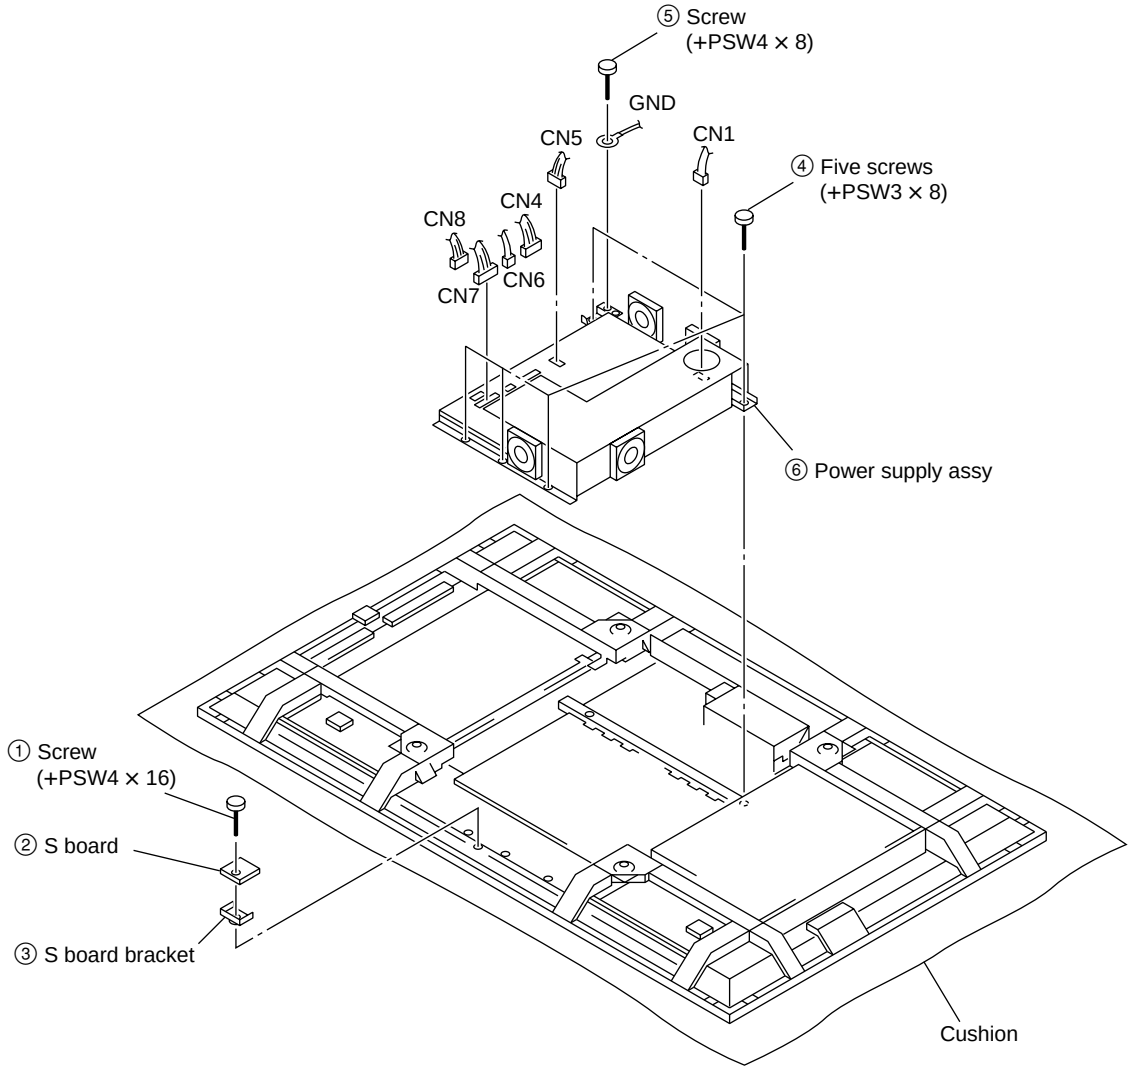
* Remove the B block assy. (Refer to 2-2-4.)



2-2-6. Extention Board Connection

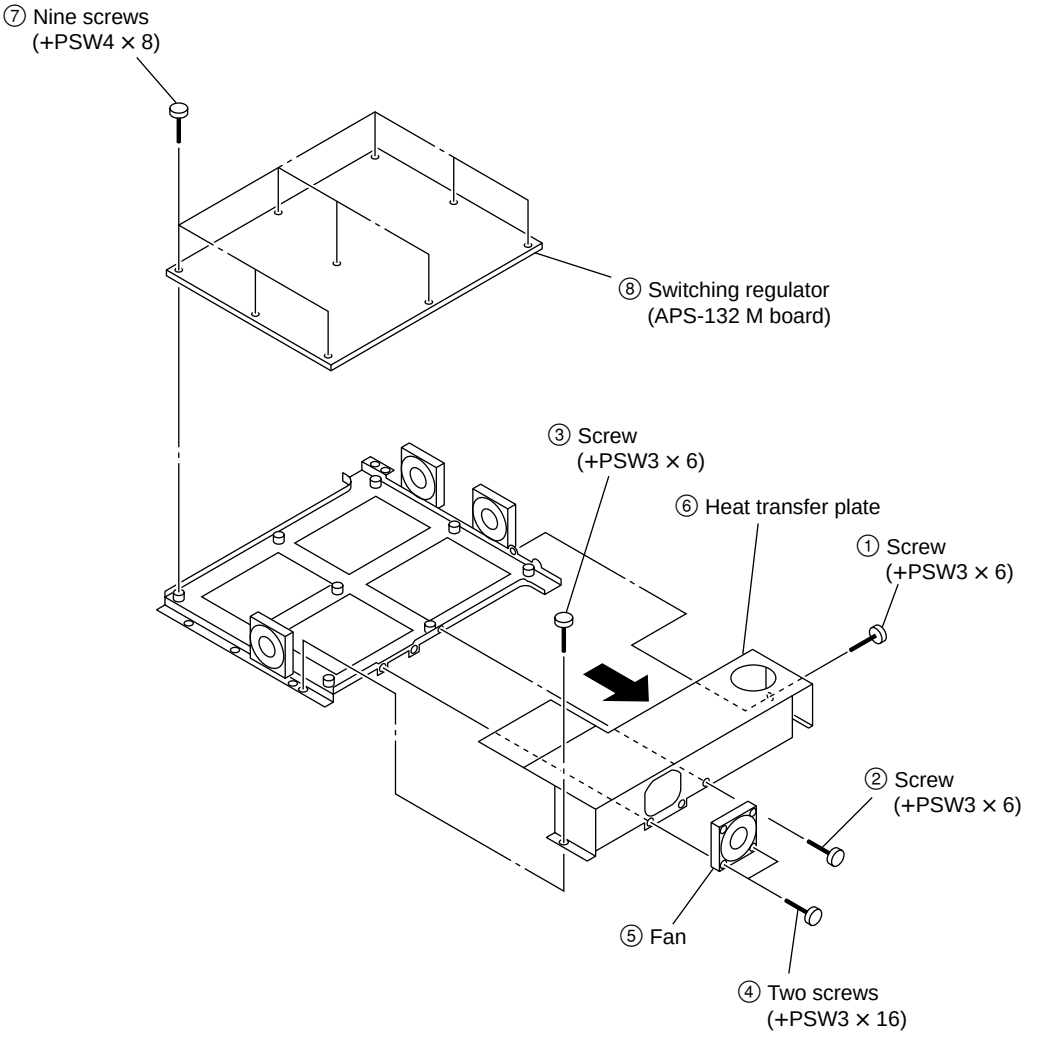


2-2-7. Power Supply Assy Removal



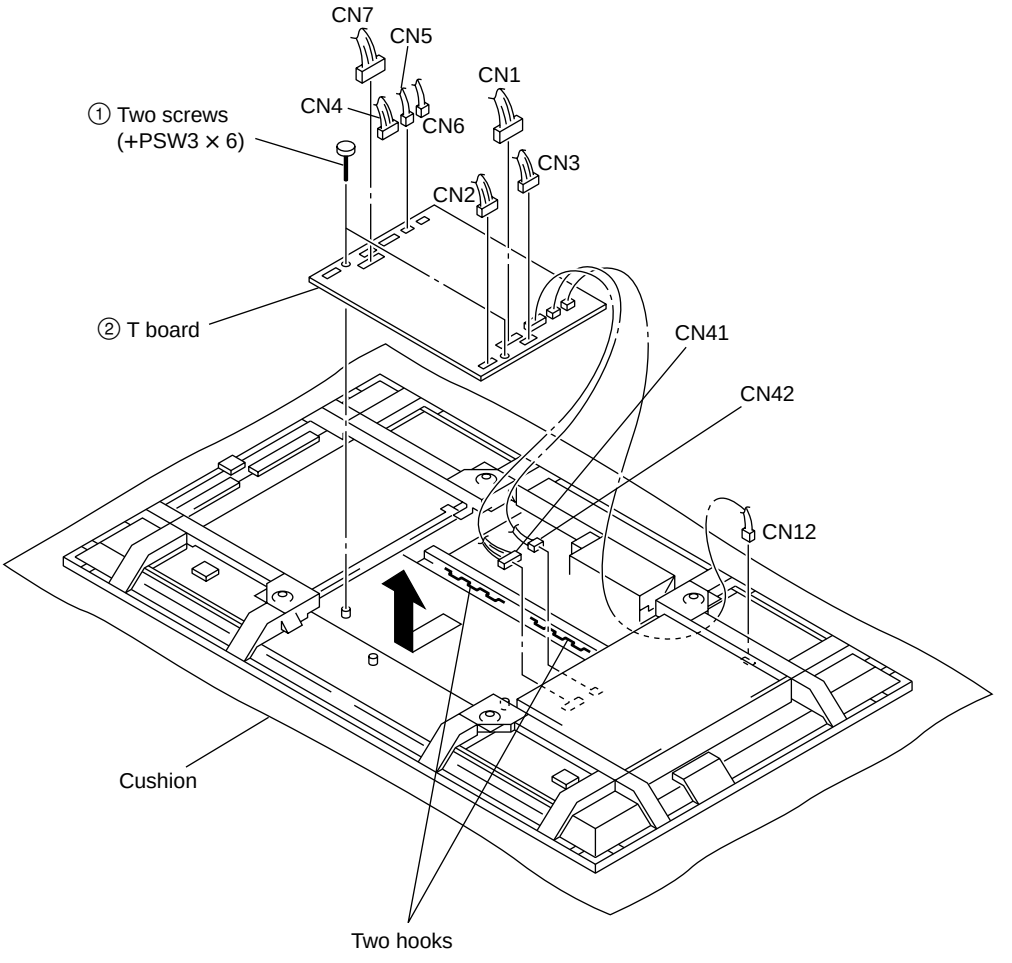
2-2-8. Switching Regulator (APS-132 M board) Removal

* Remove the Power supply assy. (Refer to 2-2-7.)



2-2-9. T Board Removal

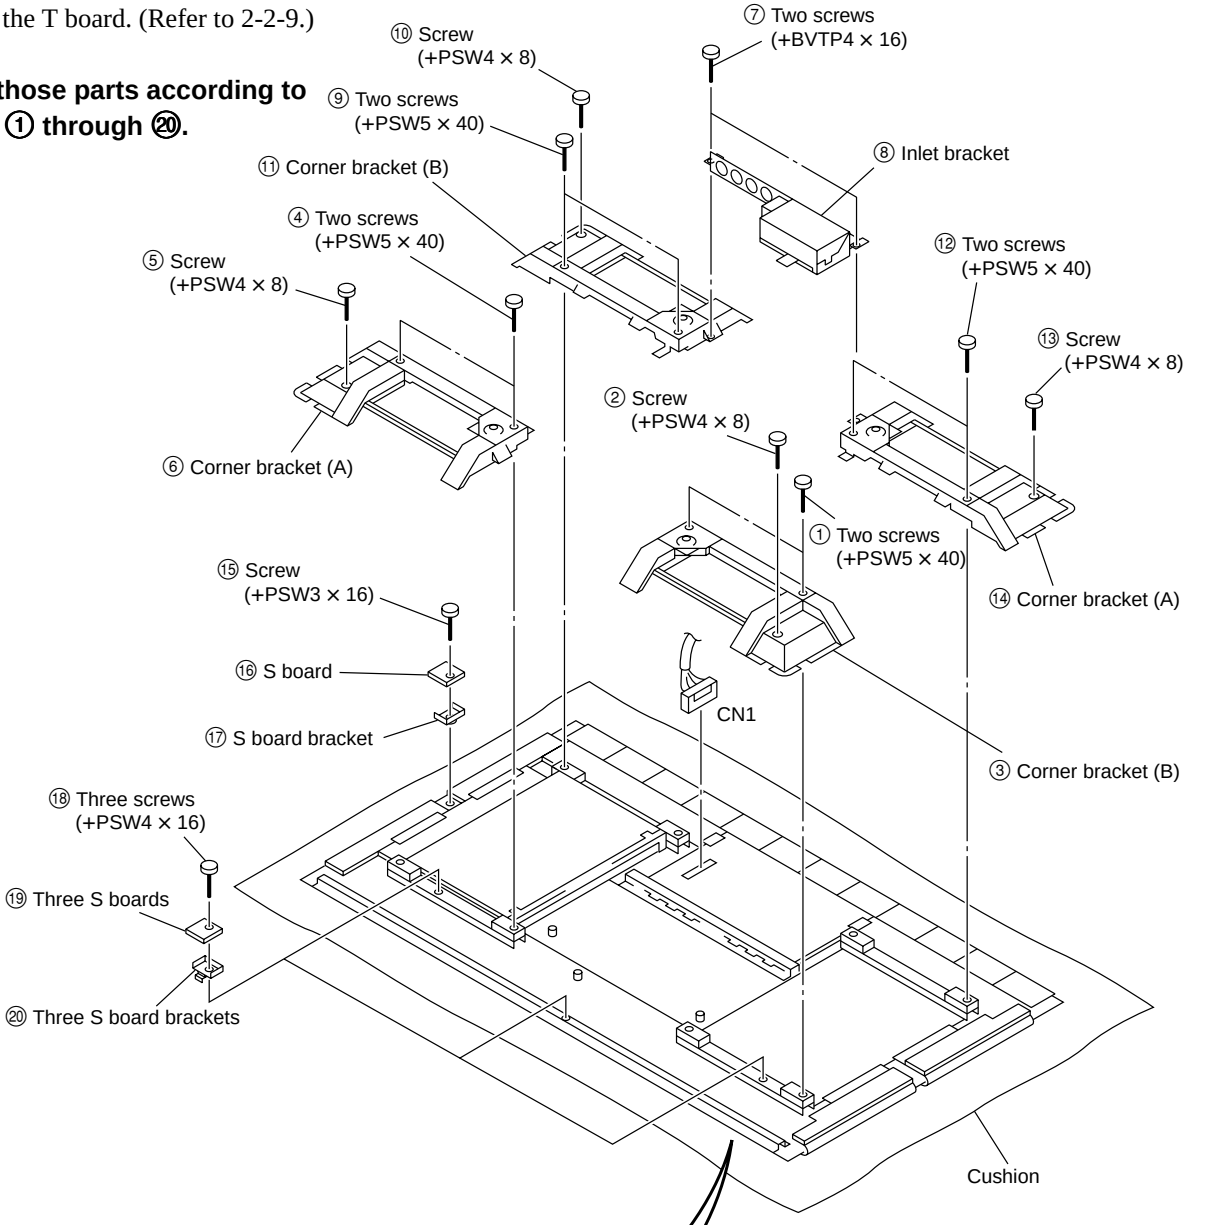
* Remove the Power supply assy. (Refer to 2-2-7.)

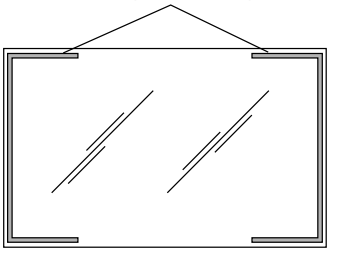


2-2-10. Plasma Display Panel Unit Removal (1/2)

* Remove the Bezel assy. (Refer to 2-2-3.)
* Remove the B block assy. (Refer to 2-2-4.)
* Remove the Power supply assy. (Refer to 2-2-7.)
* Remove the T board. (Refer to 2-2-9.)

Remove those parts according to numbers ① through ⑳.

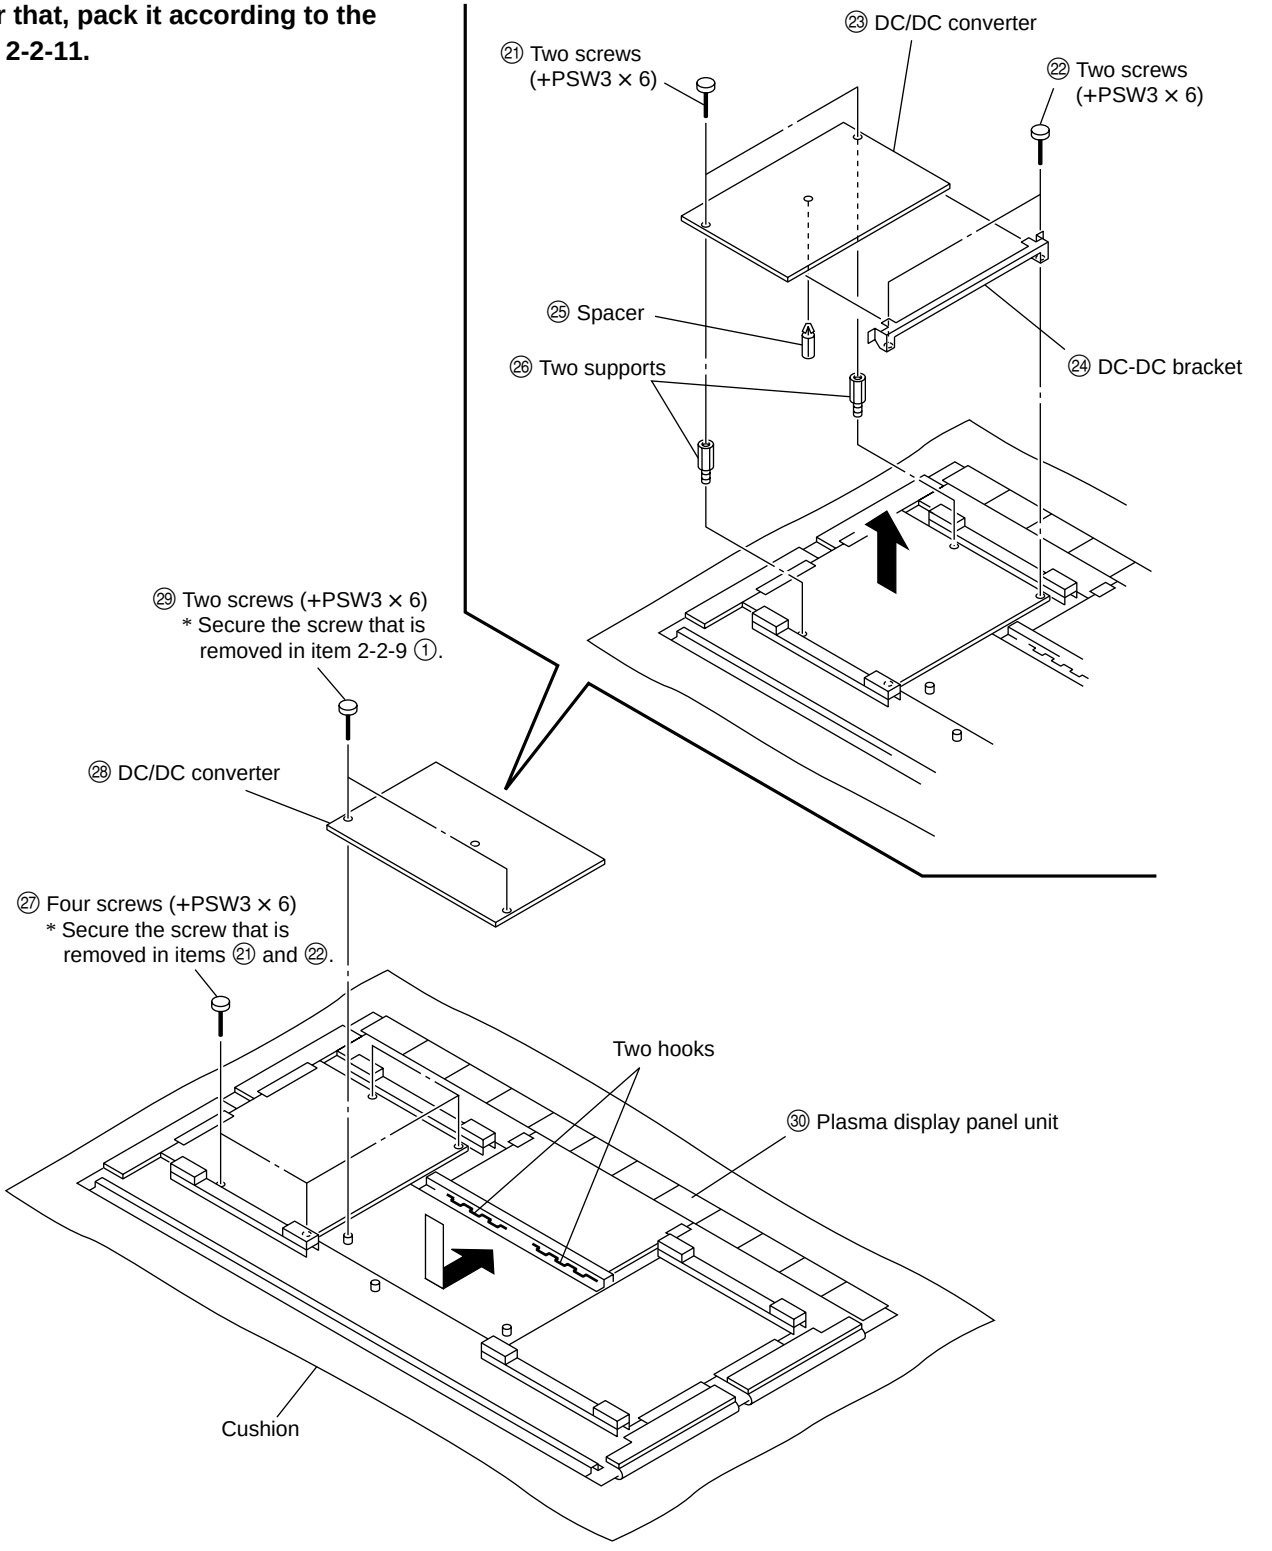




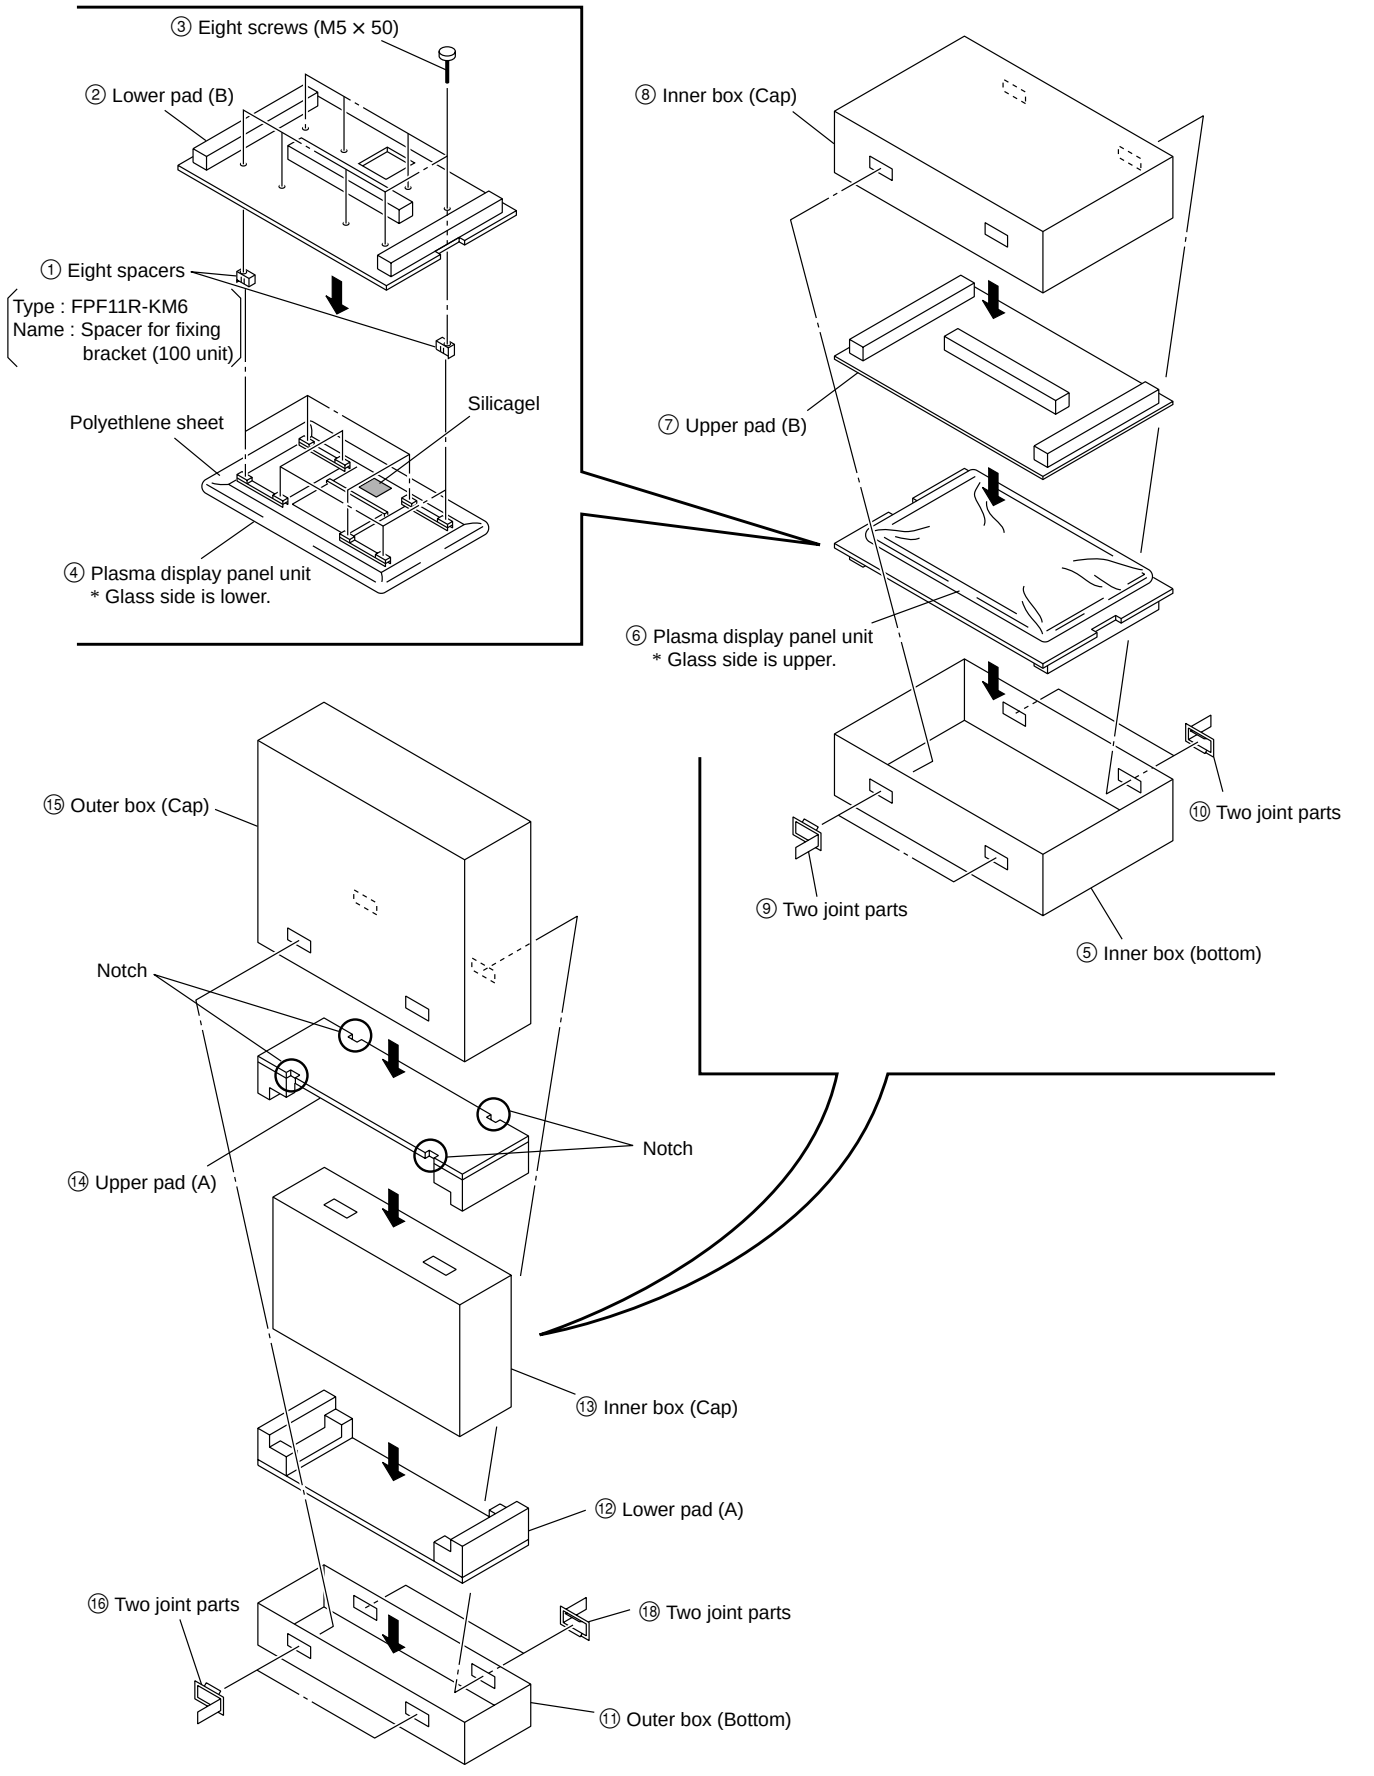
Note) If two wires attached on the glass surface of plasma display panel, be careful not to cut them.

2-2-10. Plasma Display Panel Unit Removal (2/2)

Remove the parts according to numbers ㉑ through ㉕.
Change toward of the DC/DC converter as shown.
Attach the DC/DC converter according to numbers ㉖ through ㉚.
After that, pack it according to the item 2-2-11.



2-2-11. Plasma Display Panel Unit Packing When Sending it to FUJITSU



Section 3
Electrical Adjustments

3-1. Equipment Required

- Oscilloscope
  Tektronix 2465 or equivalent
  (band width : 350 MHz or more)
- VG (Programmable video signal generator)
  VG814 or equivalent
- Frequency counter
  Advantest TR5821AK or equivalent
- Digital voltmeter
  Advantest TR6845 or equivalent
- Potential transformer
- Regulated DC power supply
- Remote commander (RM-42B)

Note : Perform the following adjustments at least 5 minutes after turning on the power.

3-2. Electrical Adjustments Using the Service Mode

The electrical adjustments can be performed using the remote commander RM-42B supplied with the PFM-42B1/B1E. The remote commander has the Service Mode. Select the Service Mode to perform the electrical adjustments as listed below.

● Service Menu

When you enter the Service Mode, the mode menu appears as shown below. The mode menu contains the three menus of MAIN MENU, SERVICE MENU and MANUAL MENU as shown. Select the SERVICE MENU to perform the electrical adjustments.

MODE SELECT

- MAIN MENU : This is the user's menu. Use the MAIN MENU when user adjustment items such as operation checks upon completion of adjustments, are going to be made.
- SERVICE MENU : This is the menu that is used for electrical adjustments. This section of this manual describes how to use the SERVICE MENU.
- MANUAL MENU : This menu is used in production factory. Do not make any attempts to use this menu and do not make any operations using this menu.

SERVICE MENU

- EEPROM RESET ------ Initialization of EEPROM
- WHITE BALANCE ------ Gain adjustment of digital gamma circuit
- ADC CALIBRATION ---- Calibration of A/D converter
- VIDEO PROCESSOR --- Level adjustment of video processor circuit
- SPECIAL FUNCTION --- Setting the special functions
- PRESET EDIT --------- Editing the preset signals
- MAINTENANCE -------- Setting the data that are unique to the particular machine
- STATUS/TEST --------- Internal status and function test

How to enter the Service Mode using the RM-42B:
In the STAND-BY state, press the keys in the following order.
DISPLAY → 5 → BRT+ → ON

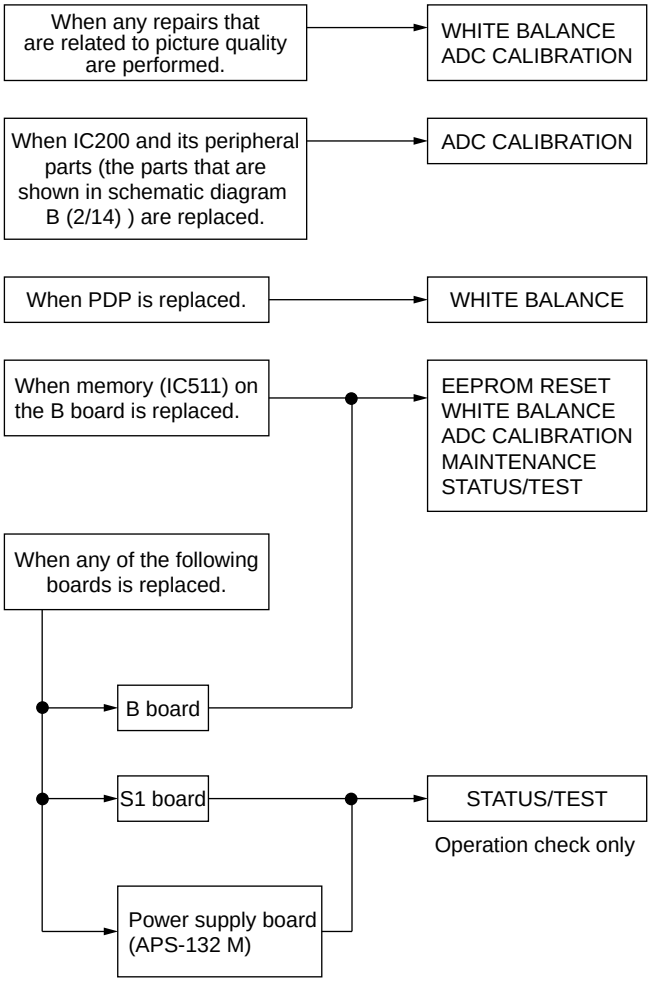
How to enter the Service Mode using the commanders other than RM-42B:
In the STAND-BY state, press the keys in the following order.
DISPLAY → 5 → VOL+ → POWER How to exit the Service Mode :
Press the ON key once and back on to enter the STAND-BY state or turn off the main power to exit the Service Mode.

● Operation of remote commander in the Service Mode

The four keys of MENU, ENTER, SELECT+ and SELECT− are the basic operation keys in the same manner as in the user adjustment. The other keys can be operated in the same manner as in the user adjustment.

● The electrical adjustments using the Service Mode become necessary in the following cases.

When any of the following repairs is performed, adjustment using the service mode becomes necessary.



SERVICE MENU

1. EEPROM RESET

EEPROM Configuration

Table 1 shows the configuration of EEPROM. The entire area or the respective areas of the EEPROM can be separately initialized.

Menu Structure

Select the desired area of EEPROM to be initialized using the following menu.

```
EEPROM RESET
▶WHOLE AREA
  COMMON
  COLOR TEMP
  PROG. PRESET
  FIXED PRESET
  LAST MEMORY
  USER MEMORY
  FACTORY
```

To initialize the desired area, firstly select the desired item from the EEPROM RESET menu. Change the selected item from CANCEL to EXECUTE. Then press ENTER.

a) WHOLE AREA
The entire area of the EEPROM is initialized. Initializing the entire area of the EEPROM has the same result as all menu items of COMMON, COLOR TEMP, PROG. PRESET, FIXED PRESET, LAST MEMORY, USER MEMORY and FACTORY are executed.

b) COMMON
Only the COMMON area of the EEPROM as shown in Table 1 is initialized.
When the COMMON area is initialized, the data that is unique to the particular machine and the common data (CONFIG MENU, REMOTE MENU) are initialized.

c) COLOR TEMP
Only the COLOR TEMP area of the EEPROM as shown in Table 1 is initialized.
When the COLOR TEMP area is initialized, the color temperature data in HIGH, LOW and the user setup data from 1 to 6 are initialized to 255. The users names are also initialized to “1” to “6”.

d) PROG. PRESET
Only the PROG. PRESET area of the EEPROM as shown in Table 1 is initialized.
When the PROG. PRESET area is initialized, the preset area (for 20 types) that is reserved as spare is initialized.

e) FIXED PRESET
Only the FIXED PRESET area of the EEPROM as shown in Table 1 is initialized.
When the FIXED PRESET area is initialized, the basic preset area is initialized to the built-in standard value that is stored in the system controller.

f) LAST MEMORY
Only the LAST MEMORY area of the EEPROM as shown in Table 1 is initialized.
When the LAST MEMORY area is initialized, only the last memory data of every signal that is adjusted by user is initialized.

g) USER MEMORY
Only the USER MEMORY area of the EEPROM as shown in Table 1 is initialized.
When the USER MEMORY area is initialized, all of the 20 types of adjustment data that is saved by the MEMORY function of the user menu are initialized to EMPTY.

h) FACTORY
Only the FACTORY area of the EEPROM as shown in Table 1 is initialized.
When the FACTORY area is initialized, all areas of the MEMORY except the areas that are listed below are initialized.

Items that are not initialized by the “FACTORY” RESET function.
- EEPROM ID CODE
- INDEX NUMBER
- MODEL NAME
- SERIAL NUMBER
- AUTO PLL SETUP
- AUTO PLL PIXEL
- H/V SHIFT
- VIDEO SHARP SW
- AUTO FT CANCEL
- WATCH ERROR
- Y GAIN
- R-Y GAIN
- B-Y GAIN
- R CUTOFF
- B CUTOFF
- ADC R GAIN
- ADC G GAIN
- ADC B GAIN
- ADC R OFFSET
- ADC G OFFSET
- ADC B OFFSET

2. WHITE BALANCE

Menu Structure

Adjust the white balance of the desired color temperature by selecting the items of the WHITE BALANCE menu and by adjusting the R, G, B gain of the digital gamma circuit.

```
WHITE BALANCE
▶WINDOW      : OFF
  COLOR TEMP : HIGH
  RED GAIN   : 255
  GREEN GAIN : 255
  BLUE GAIN  : 255
```

a) WINDOW
The PFM-42B1/B1E has the built-in window signal for white balance adjustment. There are two sizes that are the large and small windows. Select the optimum size of window for white balance adjustment.
OFF : Window does not appear.
TYPE1 : Small window
TYPE2 : Large widow

Note : When white balance is going to be adjusted using an external signal, perform the A/D converter calibration (referring to the next paragraph 3) ADC CALIBRATION) before starting the white balance adjustment.

b) COLOR TEMP
To adjust the white balance, firstly select the desired color temperature from HIGH, LOW, 1, 2, 3, 4, 5 or 6 on the COLOR TEMP sub-menu. Color temperature of items 1 to 6 are the same as those of the user menu.

c) RED GAIN
Adjust the red gain of the selected color temperature.
The range of adjustment is from 010 to 255.

d) GREEN GAIN
Adjust the green gain of the selected color temperature.
The range of adjustment is from 010 to 255.

e) BLUE GAIN
Adjust the red blue of the selected color temperature.
The range of adjustment is from 010 to 255.

White Balance Adjustment

Refer to section “3-3. White Balance Adjustment”.

3. ADC CALIBRATION

Menu Structure

Calibrate the A/D converter (IC200) until non-uniformity between the R, G and B channels of the A/D converter is removed.

```
ADC CALIBRATION
▶AUTO        : OFF
  CAL MODE   : 128
  RED GAIN   : 128
  GREEN GAIN : 128
  BLUE GAIN  : 128
  RED BIAS   : 128
  GREEN BIAS : 128
  BLUE BIAS  : 128

  R : – – –  G : – – –  B : – – –
```

a) AUTO
The A/D converter is automatically calibrated.

Note : When sufficient adjustment accuracy cannot be obtained by the automatic calibration, perform basically the manual calibration using the following ADC CALIBRATION menu items.

b) CAL MODE
The A/D converter has the calibration mode as its operating mode as follows.
* The A/D converter has the R, G, B GAIN adjustments and the R, G, B BIAS adjustments. The GAIN adjustments of the A/D converter are used for CONTRAST adjustment in the machine. The R, G, B BIAS adjustments of the A/D converter are used for BRIGHTNESS adjustment in the machine.

CAL MODE - OFF : Standard display state
The R, G, B GAIN values and the R, G, B BIAS values are controlled by the CONTRAST/BRIGHT data of the user menu. The R, G, B GAIN values and the R, G, B BIAS values of this menu cannot be adjusted independently.
CAL MODE - OFF : Calibration mode
The R, G, B GAIN values and the R, G, B BIAS values of this menu can be adjusted independently. The R, G, B data that appear in the most-bottom part of the menu in cyan, change from the indication “– – –” to the indication of any digital output data of the A/D converter.

c) RED GAIN/GREEN GAIN/BLUE GAIN
The respective R, G, B GAIN values can be adjusted independently.
The range of adjustment is from 000 to 255.

d) RED BIAS/GREEN BIAS/BLUE BIAS
The respective R, G, B BIAS values can be adjusted independently.
The range of adjustment is from 000 to 255.

A/D Calibration Adjustment

Refer to section “3-4. A/D Calibration Adjustment”.

4. VIDEO PROCESSOR

Menu Structure

The following items of the video processor can be adjusted using this menu. However, all items of the video processor have the default values on which normal operations are performed. Therefore, the video processor normally needs no adjustment.

```
VIDEO PROCESSOR
▶Y GAIN          :  111
  R-Y GAIN       :  082
  B-Y GAIN       :  128
  RED CUTOFF     :  143
  BLUE CUTOFF    :  100
  GREEN C/O  SW  :  ON
```

a) Y GAIN
The range of adjustment is from 000 to 255.
Default value : 111

b) R-Y GAIN
The range of adjustment is from 000 to 255.
Default value : 082

c) B-Y GAIN
The range of adjustment is from 000 to 255.
Default value : 128

d) RED CUTOFF
The range of adjustment is from 000 to 255.
Default value : 143

e) BLUE CUTOFF
The range of adjustment is from 000 to 255.
Default value : 100

f) GREEN C/O SW
This switch is set to ON normally.
However, if white balance cannot be obtained at the CUTOFF position, set this switch to the OFF position and adjust the white balance.

Video Processor Adjustment

Refer to section “3-5. Video Processor Adjustment”. (Perform the service menu adjustment of the video processor only when the specifications cannot be satisfied by section “3-5. Video Processor Adjustment”.)

5. SPECIAL FUNCTION

Menu Structure

Various special functions as listed in the SPECIAL FUNCTION menu can be independently set as required.

```
SPECIAL FUNCTION
▶AUTO ASPECT
  AUTO PLL SETUP
  AUTO PLL PIXEL
  H/V SHIFT
  VIDEO SHARP SW
  AUTO FT CANCEL
```

a) AUTO ASPECT (Japanese Model only)
When the BKM-B11 is installed, the aspect ratio is automatically switched by the identification signal at the D terminal.
ON : Aspect ratio is automatically switched by the identification signal
OFF : Automatic switching of aspect ratio is prohibited.

b) AUTO PLL SETUP
Sets enable/disable of automatic execution of the PIXEL ADJUST function.
ON : When the AUTO PLL SETUP is set to ON, the PIXEL ADJUST is automatically executed when the main power is turned on or when the input signal is switched. (Be noted that about 10 seconds are required to output the video signal after switching the input signal when this function is kept to the ON position.)
OFF : The automatic PIXEL ADJUST is executed only when AUTO item of the user menu PIXEL ADJUST is activated.
This function becomes valid only when the signal that enables the PIXEL ADJUST is inputted to the PFM-42B.
Set the AUTO PLL SETUP item to the OFF position normally.

c) AUTO PLL PIXEL

Selects the functions that are automatically adjusted when PIXEL ADJUST is executed.

ON : Both the TOTAL H PIXEL and DOT PHASE are automatically adjusted.

OFF : Only the DOT PHASE is automatically adjusted.

In the case that the PFM-42B1/B1E is used under the environment where input signal contains much noise, there are cases that the PIXEL ADJUST mis-operations. Therefore, set the AUTO PLL PIXEL to the OFF position. In such a case, the TOTAL H PIXEL can be adjusted only manually.

This function becomes valid only when the signal that enables the PIXEL ADJUST is inputted to the PFM-42B.

Set the AUTO PLL PIXEL item to the ON position normally.

d) H/V SHIFT

Selects the method to control the horizontal and vertical picture shift.

EDGE : When EDGE is selected, a picture is shifted by changing the starting position when reading data into memory. Using this function, the entire area including blanking of all pictures can be displayed by shifting. The variable range of shifting is 1 horizontal and vertical period respectively.

CAPT : When CAPT is selected, the picture that is already written into memory is shifted by a scan converter. Using this function, a picture can be shifted as much as ± 50 % of a picture. When a picture is partly lacked at an end of a picture, the lacked portion of a picture cannot be displayed.

Set the H/V SHIFT item to the EDGE position normally.

e) VIDEO SHARP SW

Sets analog aperture ON or OFF.

The two methods are used for the aperture correction of the video signals (NTSC/PAL/SECAM/NTSC4.43/PAL60/PAL-M and YUV signal having horizontal frequency of 15 kHz). These two methods are the scaling filter and the analog aperture of the scan converter.

ON : Both the scaling filter and the analog aperture of the scan converter are used for aperture correction.

OFF : Only the scaling of the scan converter is used for aperture correction.

This function becomes valid only when the signal (NTSC/PAL/SECAM/NTSC4.43/PAL60/PAL-M and YUV signal having horizontal frequency of 15 kHz) is inputted to the PFM-42B.

Set the VIDEO SHARP SW item to the ON position normally.

f) AUTO FT CANCEL

Sets the FT (field tearing) cancel circuit ON or OFF.

The PFM-42B1/B1E has the FT (field tearing) prevention circuit caused by the overrun of memory while it is displaying the moving picture (video and DTV). However, there can be cases that noise appears on screen when the FT (field tearing) prevention is being executed.

ON : The FT (field tearing) is cancelled in every picture size and in every shift conditions as long as the PFM-42B1/B1E is receiving the moving picture. When this item is set to ON, noise may appear only once after the size/shift is adjusted. (Noise does not last long but appears only once when the size/shift adjustment is complete.)

OFF : The FT (field tearing) cancel circuit is disabled. When OFF is selected, there can be a case that the FT (field tearing) appears on screen depending on the adjustment conditions of picture size/shift. However, the noise due to operation of the processing circuit does not occur.

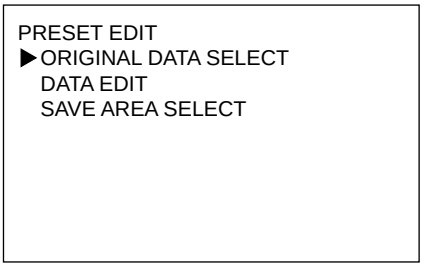
Set the AUTO FT CANCEL item to the ON position normally.

6. PRESET EDIT

Preset Data Configuration

Memory map of the preset data area is shown in Table 1 (PROG. PRESET/FIXED PRESET). The areas from 1 to 20 are assigned to store the additional signal. The areas from 21 to 74 are assigned to store the internal signal.

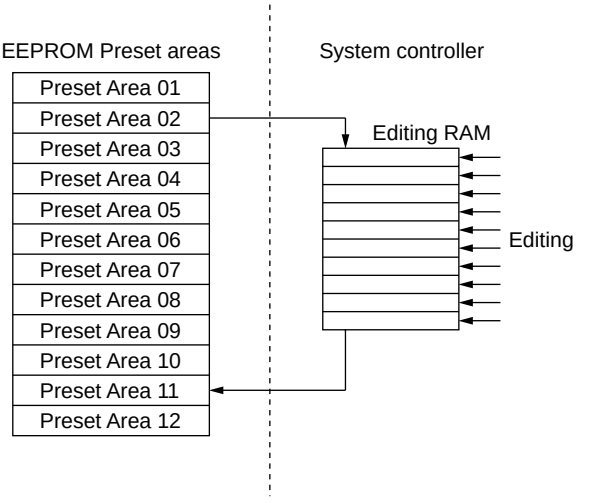
Menu Structure



How To Edit The Preset Data

As shown in the illustration, the system controller contains the memory area (i.e., Editing RAM) that is assigned only for data editing. The source data that is used for editing must be firstly copied to the Editing RAM. Edit then the copied data as desired. Finally save the result of editing in the specified preset area of the EEPROM.

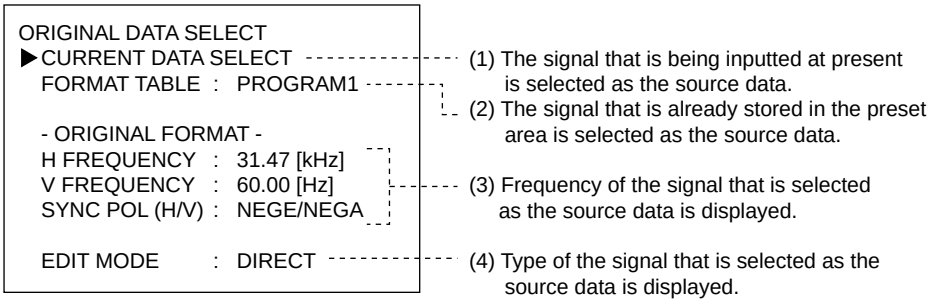
(The illustration shows an example that the data in the preset area No. 02 is once copied to the Editing RAM where data is edited. The edited data is sent back to the preset area No. 11 where the edited data is saved.)



a) ORIGINAL DATA SELECT

Menu Structure

Select the source data that is used for editing. Then the selected source data is copied to the Editing RAM.



(1) CURRENT DATA SELECT
When an editing is performed using the signal that is being inputted at present is selected as the source data, move the cursor to this item and press ENTER. The selected data is copied to the Editing RAM.

(2) FORMAT TABLE : PROGRAM 1
When an editing is performed using the signal that is already stored in the preset area is selected as the source data, move the cursor to this item and press ENTER. Select the desired area from Table 1 by pressing the +/– keys. The selected data is copied to the Editing RAM.

(3) - ORIGINAL FORMAT -
Frequency of the signal that is selected as the source data in step (1) or (2) is displayed.
Use the frequency data as the fundamental information when selecting a source data.

(4) EDIT MODE
When the signal that is being inputted at present is selected as the source data, the message DIRECT appears. When the signal that is already stored in the preset area is selected as the source data, the message TABLE appears.

Note : The editing items that can be editing here are different in the DIRECT mode and the TABLE mode. Refer to the next sub-section “b) DATA EDIT” for the editing items.

< When DIRECT mode is used for editing >
… The DIRECT mode is used when editing is performed while watching the picture on screen in the case that the specifications of the signal are not known. …
When DIRECT mode is selected, select the desired adjustment item referring to the next sub-section “b) DATA EDIT” by pressing the +/– keys. Press the ENTER key. Then the result of data adjustment is reflected on the display screen. (Pressing the MENU key returns to the previous menu display.)
However, the three adjustment items H FREQUENCY, V FREQUENCY and SYNC POL cannot be changed by the menu operation.

< When TABLE mode is used for editing >
… The TABLE mode is used when the specifications of the signal to edit are already known. …
All adjustment items adjusted by the menu but result of adjustment is not reflected on the actual picture. Data can be edited only.

b) DATA EDIT

Menu Structure

The following items of the source data that is copied to the Editing RAM can be modified as described below.

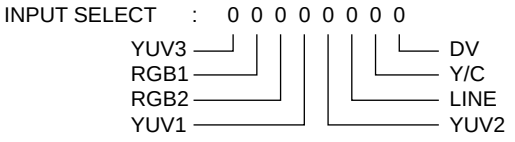
DATA EDIT			
▶INPUT SELECT	:	01100000	(1) Acceptable type of input signal
INPUT SELECT2	:	00000101	
H FREQUENCY	:	31.47 [kHz]	(2) Horizontal frequency
V FREQUENCY	:	60.00 [Hz]	(3) Vertical frequency
SYNC POL (H/V)	:	NEGA/NEGA	(4) Sync signal polarity
TOTAL H PIXEL	:	800	(5) Total number of horizontal dots
LEFT EDGE	:	140	(6) Horizontal dot position to start reading
H RESOLUTION	:	640	(7) Horizontal resolution (Number of dots)
TOP EDGE	:	35	(8) Vertical dot position to start reading
V RESOLUTION	:	480	(9) Vertical resolution (Number of dots)
DOT PHASE	:	128	(10) Dot phase
CP PLACEMENT	:	005	(11) Clamp pulse width (Number of dots)
CP DURATION	:	016	(12) Clamp pulse position (Number of dots)
INTERLACE MODE	:	OFF	(13) Interlace setting
FILED MODE	:	OFF	(14) In-field processing setting
FRAMELOCK MODE	:	OFF	(15) Vertical sync setting
MATRIX SELECT	:	ITU709	(16) Color difference matrix setting
PICTURE AGC	:	ON	(17) Automatic brightness adjustment setting
ASPECT	:	4 × 3	(18) Aspect ratio setting
ZOOM	:	× 1	(19) Zoom setting
APERTURE INIT	:	MID	(20) Aperture initial value setting
APERTURE HIGH	:	000	(21) Aperture data setting
APERTURE MID	:	002	(22) Aperture data setting
APERTURE LOW	:	004	(23) Aperture data setting
AUTO PLL	:	ON	(24) Automatic PIXEL ADJUST setting
SYNC WIDTH (µs)	:	003.81	(25) Horizontal sync signal width

Note : A maximum of 8 lines of the above menu can be displayed on screen. The other menu items can be displayed by scrolling the display by moving the cursor up or down.

(1) INPUT SELECT

The input signals that are acceptable to the PFM-42B1/B1E are set.

This item consists of 8 bits. Each bit corresponds to each type of input signal. Only the input channel to which "1" is set, can be received by the PFM-42B.



Note : Regarding the LINE and Y/C input channels, these signals having horizontal frequency of 15 kHz can be inputted. Because these input signals pass through the double-speed processing circuit in the PFM-42B circuit configuration, do not use the LINE and Y/C input channels.

(2) INPUT SELECT 2

(3) H FREQUENCY

The horizontal frequency is set.

Note: This menu item cannot be modified in the DIRECT mode because the DIRECT mode can edit the signal that is being inputted at present.

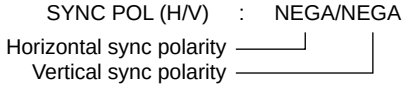
(4) V FREQUENCY

The vertical frequency is set.

Note : This menu item cannot be modified in the DIRECT mode because the DIRECT mode can edit the signal that is being inputted at present.

(5) SYNC POL (H/V)

Polarity of sync signal is set.



To set the polarity, select as follows:

Negative polarity : NEGA

Positive polarity : POSI

SOG : ---

Note : This menu item cannot be modified in the DIRECT mode because the DIRECT mode can edit the signal that is being inputted at present.

(6) TOTAL H PIXEL

The total number of dots in a horizontal period is set.

The number of dots that is set here becomes the initial value of the user menu "TOTAL H PIXEL".

Note : Set the total number of dots to satisfy the following conditions.
TOTAL H PIXEL ≧ [LEFT EDGE + H RESOLUTION]

(7) LEFT EDGE

The horizontal sync width (in dots) + horizontal back porch width (in dots) are set.

(8) H RESOLUTION

Horizontal resolution power is set.

Note : When 1280 or more is set to the horizontal resolution, picture may not be displayed normally on screen. When a signal that has the higher resolution than the SXGA signal, is going to be preset, reduce the number of horizontal resolution by skipping or any other means down to 1280 or less.

(9) TOP EDGE

The vertical sync width (in lines) + vertical back porch width (in lines) are set.

Note : Set the TOP EDGE value to satisfy the following conditions.
[TOP EDGE + V RESOLUTION] ≦ [horizontal frequency + vertical frequency]

(10)V RESOLUTION

The vertical resolution is set.

Note : Set the V RESOLUTION value to satisfy the following conditions.
[TOP EDGE + V RESOLUTION] ≦ [horizontal frequency + vertical frequency]

(11)DOT PHASE

Pulse phase of the horizontal sampling frequency is set.

The pulse phase that is set here becomes the initial value of DOT PHASE of the user menu.

The pulse phase can be set in the range of 000 to 255.

(12)CP PLACEMENT

Clamp pulse position is set.

The clamp pulse position is set starting from the trailing edge of horizontal sync signal (when data is 000). Increasing this value moves the clamp pulse in the direction toward the picture area.

The clamp pulse generating position "Tcp" is given by the following equation starting from the trailing edge of horizontal sync signal.

Tcp = CP PLACEMENT / [horizontal sync frequency × TOTAL H PIXEL] (in seconds)

(13)CP DURATION

Clamp pulse width is set.

The clamp pulse width is set starting from the position that is determined by CP PLACEMENT. Increasing this value widens the clamp pulse width in the direction toward the picture area.

The clamp pulse width "Wcp" is given by the following.

Wcp = CP DURATION / [horizontal sync frequency × TOTAL H PIXEL] (in seconds)

(14)INTERLACE MODE

Whether the input signal is interlaced or not is set.

ON : When the input signal is the interlaced signal.

OFF : When the input signal is not the interlaced signal.

(15)FIELD MODE

Whether the interlaced signal is processed within a field or within a frame, is set.

ON : When the input interlaced signal is processed within a field.

OFF : When the interlaced signal is processed within a frame.

Select the ON position when a signal has a low co-relationship between the two fields within a frame such as moving picture.

(16)FRAMELOCK MODE

Whether the PDP display picture is synchronized with the input signal to scan converter or not, is set.

ON : The PDP display picture is synchronized with the input signal.

OFF : The PDP display picture is asynchronous with the input signal.

When moving picture (animation) is going be displayed, select the ON position.

Note : This item can be set to ON as long as the vertical frequency of the input signal is in the range of 50 to 60 Hz.

(17)MATRIX SELECT

The color difference matrix when the YUV signal is being input, is set.

MATRIX SELECT : ITU601

MATRIX SELECT : ITU709

(18)PICTURE AGC

Whether the PICTURE AGC is turned ON or OFF is set.

Result of this setting becomes the initial value of the user menu PICTURE AGC.

This function becomes valid only when the COMPOSITE/YC/YUV signal is being received.

(19)ASPECT

The desired aspect ratio is selected from the aspect ratios of 4 × 3 or 16 × 9 or W ZOOM or LB ZOOM. Result of this setting becomes the initial value of the user menu ASPECT.

Note : The W ZOOM, can not be selected when the ZOOM is in the range of × 2 to × 4.

(20)ZOOM

The desired zoom ratio is selected from the zoom ratios of × 1 or × 2 or × 3 or × 4. Result of this setting becomes the initial value of the user menu ZOOM.

Note : Any zoom ratios other than × 1 cannot be selected when the ASPECT is W ZOOM, LB ZOOM.

(21)APERTURE INIT

The desired aperture is selected from HIGH or MID or LOW. Result of this setting becomes the initial value of the user menu APERTURE.

(22)APERTURE HIGH

The scaling filter value when selecting HIGH of the APERTURE, is set. The scaling filter value can be set in the range of 000 to 011. (Refer to the Supplement to APERTURE in the following paragraph.)

(23)APERTURE MID

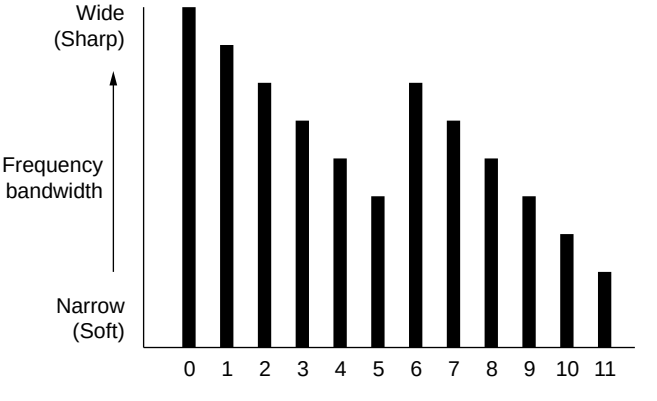
The scaling filter value when selecting MID of the APERTURE, is set. The scaling filter value can be set in the range of 000 to 011. (Refer to the Supplement to APERTURE in the following paragraph.)

(24)APERTURE LOW

The scaling filter value when selecting LOW of the APERTURE, is set. The scaling filter value can be set in the range of 000 to 011. (Refer to the Supplement to APERTURE in the following paragraph.)

< Supplement to APERTURE >

The PFM-42B1/B1E has the 12 different types of built-in scaling filter. Select an appropriate filter using the following filter characteristics chart as a guideline.



(25) AUTO PLL

Whether the user menu adjustment PIXEL ADJUST is enabled or disabled, is set.

ON : The user menu adjustment PIXEL ADJUST is enabled.

OFF : All items of the adjustment PIXEL ADJUST show the indication [−−−]. The user menu adjustment PIXEL ADJUST is disabled.

Select the OFF position when the setup of the TOTAL H and that of RESOLUTION do not agree with specifications of the actual input signal.

(26) SYNC WIDTH (µs)

Sync pulse width of the horizontal sync signal is set in units of microseconds [µseconds].

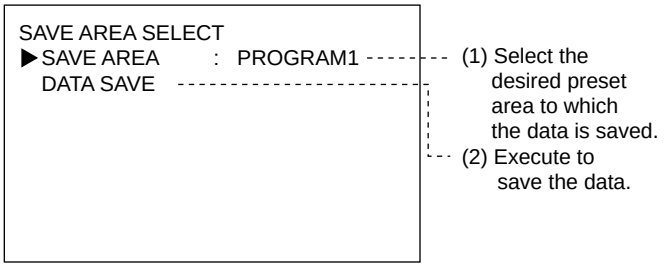
This menu item is prepared for the purpose of stabilization of the sync signal separation circuit. Therefore, accurate setting is not necessarily needed.

If the sync signal width is not known, select "Not set" (source data).

c) SAVE AREA SELECT

Menu Structure

The data that is copied in the Editing RAM, is saved in the preset area.



(1) SAVE AREA SELECT

Select the desired preset area from Table 1 to which the content of the Editing RAM is saved.

(2) DATA SAVE

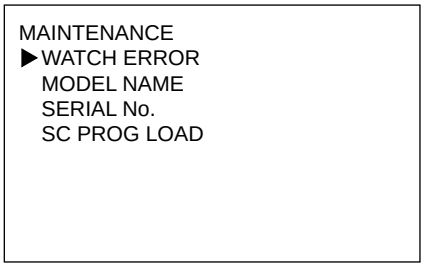
Execute to save the data to the preset area that is selected by the SAVE AREA SELECT. Change the item from CANCEL to EXECUTE. Then press ENTER.

Note : Judgment whether the input signal agrees with the preset data or not, is performed using the horizontal sync frequency, vertical sync frequency and polarity of the sync signals. If the same sync signal already exists in the preset area (Table 1), the specification that has the small preset No., has a higher priority.

7. MAINTENANCE

Menu Structure

The data that is unique to the particular machine of the PFM-42B1/B1E and the scan converter can be upgraded using this menu.



a) WATCH ERROR

Errors of the built-in watch IC can be corrected.

To correct the error, enter the measurement value of the frequency counter that is connected.

Range of adjustment is from 32761.85 Hz to 32774.25 Hz.

b) MODEL NAME

Model name can be set.

c) SERIAL No.

Serial number can be set.

d) SC PROG LOAD

The built-in program of the scan converter can be modified using this menu item.

Change the item from CANCEL to EXECUTE. Then press ENTER.

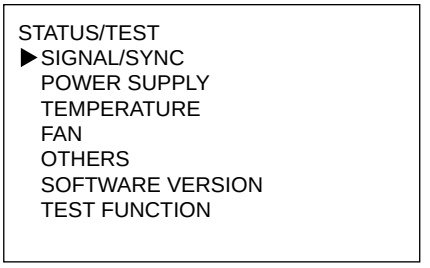
Watch Error Adjustment

Refer to section "3-6. Watch Error Adjustment".

8. STATUS/TEST

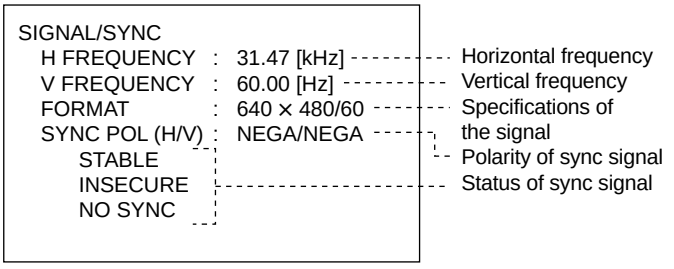
Menu Structure

The internal status of the PFM-42B1/B1E can be checked and its functions can be checked using the STATUS/TEST



menu.

a) SIGNAL/SYNC

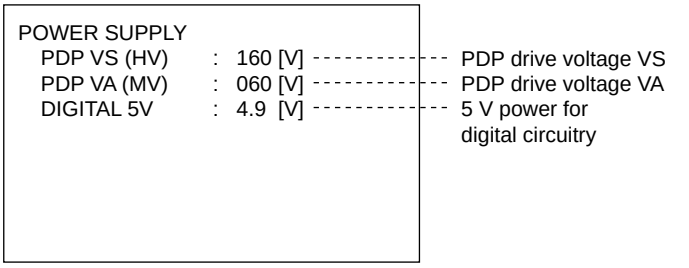


Information regarding the sync signal of the input signal is displayed.

Horizontal frequency :
Horizontal frequency of the input signal is displayed in four digits.
Vertical frequency :
Vertical frequency of the input signal is displayed in four digits.
Specifications of the signal :
Names of presets of the preset areas (Table 1) corresponding to input signal are displayed.
Polarity of sync signal :
Polarity of sync signal is displayed.
Status of sync signal :
Status of sync signal is displayed in cyan.

STABLE	: Sync signal is stable.
INSECURE	: Sync signal is unstable.
NO SYNC	: Sync signal does not exist.

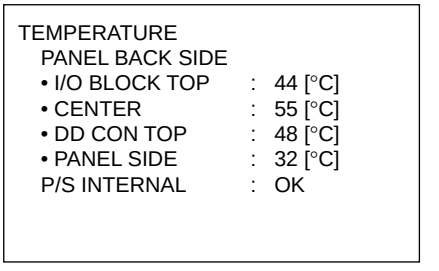
b) POWER SUPPLY



The main DC power voltages of the PFM-42B are displayed.

PDP drive voltage VS :
High voltage power to PDP is displayed.
PDP drive voltage VA :
Medium voltage power to PDP is displayed.
5 V power for digital circuitry :
Internal 5 V power is displayed.

c) TEMPERATURE



Internal temperature information of PFM-42B1/B1E is displayed.

Temperature at the top on the rear of the panel :
Temperatures upper side of the rear panel are displayed as follows.

I/O BLOCK SIDE	: Temperature at the input/output terminal board.
CENTER	: Center temperature
PANEL SIDE	: Left side of the set
DD CON TOP	: Temperature at the DC-DC converter

Power supply internal temperature information :
Temperature status inside the power supply block is displayed. The message OK appears when temperature is normal. The message NG appears when temperature is abnormal.

d) FAN

```
FAN
   DRIVE CIRCUIT      :  OK
   • B BOARD          :  OK
   • P/S BLOCK TOP    :  OK
   • P/S BLOCK MID    :  OK
   • P/S BLOCK LOW L  :  OK
   • P/S BLOCK LOW R  :  OK
   • DD CON SIDE      :  OK
   • I/O BLOCK SIDE   :  OK
```

Fan drive circuit:
Indicates the operating status of the fan control circuit.
OK appears when the fan control circuit is operating normally.
NG appears when the fan control circuit is defective.

P/S BLOCK TOP	: Power supply block
P/S BLOCK MID	: Left side of the power supply block
P/S BLOCK LOW L	: Lower left side of the power supply block
P/S BLOCK LOW R	: Lower right side of the power supply block
DD CON SIDE	: Lower left side
I/O BLOCK SIDE	:Lower right side

e) OTHERS

```
OTHERS
   EEPROM ID          :  OK
   EEPROM SAVE        :  OK
   EEPROM LOAD        :  OK
   EEPROM ACK         :  OK
   PW164 ACK          :  OK
   RTC INITIALIZE     :  OK
   RTC BATTERY        :  OK
   RTC XTAL           :  OK
```

EEP ROM ID	:ID code error
EEP ROM SAVE	:Data write error
EEP ROM LOAD	:Data read error
EEP ROM ACK	:Defective
PW164 ACK	:Communication error with scan converter
RTC INITIALIZE	:Time data initializatioin due to abnormal register value
RTC BATTTERY	:Low backup voltage warning
RTC XTAL	: Warning due to stoppage of crystal oscillator for watch

f) SOFTWARE VERSION

```
SOFTWARE VERSION
   MAIN CPU           :  Ver. 1.00 --------- System controller
   SCAN CONVERTER     :  Ver. 1.00 --------- Scan converter
```

Version of each software is displayed.
System controller :
Version of the main microprocessor is displayed.
Scan converter :
Version of the scan converter (IC207) is displayed.

g) TEST FUNCTION

```
TEST FUNCTION
   FAN DRIVE  ------------------------- Fan operation
   BLUE ONLY  -------------------------   check only
                                       -- Blue only
```

This is the test function.

- Fan operation check only

```
FAN DRIVE          :  AUTO

   DRIVE DATA      :  10783  --------- Drive register data
   DRIVE VOLTAGE   :  08.9 [V] ------
                                      -- Actual drive voltage
```

When the FAN DRIVE is changed from AUTO to MANUAL, and ENTER is pressed, the DRIVE DATA indication changes to cyan. In this setup, the drive register value can be manually modified. When the drive register value is changed, the pulse width of the PWM signal in the fan voltage control PWM circuit is changed accordingly.
Fans can be checked whether they operate normally or not by comparing the register value and the actual drive voltage, and by comparing the actual drive voltage and the actual operations of the fans.
Variable range of the drive register value :
00000 to 16383

- Blue only
  When Blue only is selected, all of the R, G and B colors become the blue data.

3-3. White Balance Adjustment

1. Switch the WINDOW to either TYPE1 or TYPE2.
2. Select the COLOR TEMP “HIGH”.
3. Select RED GAIN and GREEN GAIN. Perform the white balance adjustment until the color temperature satisfies the specifications of 9300 K.
   Set BLUE GAIN to 255 normally.
4. Select the COLOR TEMP “LOW”.
5. Using BLUE GAIN, RED GAIN and GREEN GAIN, perform the white balance adjustment until the color temperature satisfies the specifications of 6500 K.

Note : When the white balance at 6500 K cannot be obtained by any means, decrement the BLUE GAIN by 16 steps and repeat the adjustment of step 5).

6. Switch the WINDOW to OFF.

3-4. A/D Calibration Adjustment

1. Connect the VGA (640 × 480@60) signal to the INPUT1 connector.
2. Connect the cross-hatch signal to the INPUT connector.
   Execute the AUTO item of the PIXEL ADJUST.
3. Select the video signal of the 10 % flat field pattern.
4. Set the CAL mode to ON.
5. Check the following values that are shown in the bottom of the menu in cyan.
   R : XXX / G : XXX / B : XXX
   Adjust RED BIAS and BLUE BIAS until the following two equations are satisfied.
   (G value −1) ≦ R value ≦ (G value +1)
   and
   (G value −1) ≦ B value ≦ (G value +1)
   (Do not adjust GREEN BIAS.)
6. Select the video signal of the maximum brightness 90 % gray scale pattern.
   (Select the gray scale pattern that has the left half of display in black and the right half of display in white.)
7. Check the following values that are shown in the bottom of the menu in cyan.
   R : XXX / G : XXX / B : XXX
   Adjust RED BIAS and BLUE BIAS until the following two equations are satisfied.
   (G value −1) ≦ R value ≦ (G value +1)
   and
   (G value −1) ≦ B value ≦ (G value +1)
   (Do not adjust GREEN BIAS.)
8. Set the CAL mode to OFF.

3-5. Video Processor Adjustment

YUV Level Check and Adjustment

Note: Be sure to use the Z MOUNT (extension board).

1. Connect the YUV 480/60 signal to the INPUT-1 connector.
2. Select the color bar signal.
3. Measure the voltage waveform at pin-14 of IC1003 on the B board with an oscilloscope. Confirm that amplitude of the signal portion excluding the sync signal is in the range of 600 mV ± 5%.
   (If the video signal excluding sync is outside the specifications, adjust the video signal level using the Y GAIN.)
4. Measure the voltage waveform at pin-15 of IC1003 with an oscilloscope. Confirm that the R-Y signal has the following amplitude.
   580 mV ± 5 %
   (If the R-Y signal is outside the specifications, adjust the R-Y signal level using the R-Y GAIN.)
5. Measure the voltage waveform at pin-4 of IC1003 with an oscilloscope. Confirm that the B-Y signal has the following amplitude.
   700 mV ± 5 %
   (If the B-Y signal is outside the specifications, adjust the B-Y signal level using the B-Y GAIN.)

Cutoff Adjustment

1. Connect the Y signal of the 525/60 signal to the Y input only of the YUV input connector.
2. Select the gray scale signal.
3. Observe the dark area of display screen. Adjust R CUTOFF and B CUTOFF until the dark area has completely no color at all.

3-6. Watch Error Adjustment

1. Connect the jig circuit as shown in Fig. (b) and a frequency counter to the B board CN18.
2. Enter the measurement value on a frequency counter in the WATCH ERROR.

WATCH ERROR Jig Circuit

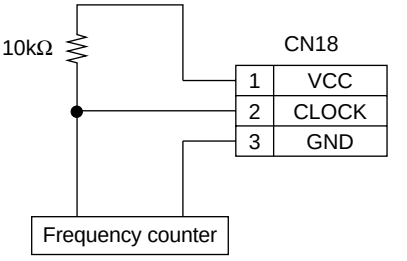

Fig. (b)

3-7. Switching Regulator (APS-132 M Board) Adjustments

3-7-1. Preparation

1. Remove the switching regulator from the set, and adjust it under no load.
2. If adjusting the switching regulator with each output loaded, set as follows.

• **Load on each output**

Output	Pin No.	MIN	MAX
VCC	CN4 ① pin	1.0 A	5.0 A
VS	CN5 ② pin	0.5 A	1.7 A
VA	CN5 ⑤ pin	0.5 A	1.5 A
AUDIO +B	CN6 ③ pin	0.05 A	1.0 A
STBY +5 V	CN7 ② pin	0.2 A	0.3 A
5VD	CN7 ⑤ pin	1.2 A	1.8 A
6.2 V	CN7 ⑧ pin	0.6 A	1.0 A
13.5 V	CN7 ⑫ pin	0.5 A	1.0 A
13 V	CN7 ⑭ pin	0.4 A	1.0 A

3-7-2. 13 V System Minimum Frequency Adjustment

1. Apply 18 V DC to both ends of C169.
2. Connect a frequency counter between gate and source of Q153.

Note : As the input of frequency counter, use 10 : 1 oscilloscope probes and raise the input impedance.

3. Adjust the RV150 so that the oscillation frequency is 93 ± 0.5 kHz.

3-7-3. VS System Minimum Frequency Adjustment

1. Short between pin-3 and pin-4 of PH501.
2. Apply 18 V DC to both ends of C169.
3. Connect a frequency counter between gate and source of Q503.

Note : As the input of frequency counter, use 10 : 1 oscilloscope probes and raise the input impedance.

4. Adjust the RV500 so that the oscillation frequency is 49 ± 0.5 kHz.

3-7-4. VA System Minimum Frequency Adjustment

1. Short between pin-3 and pin-4 of PH701.
2. Apply 18 V DC to both ends of C169.
3. Connect a frequency counter between gate and source of Q703.

Note : As the input of frequency counter, use 10 : 1 oscilloscope probes and raise the input impedance.

4. Adjust the RV700 so that the oscillation frequency is 65 ± 0.5 kHz.

3-7-5. PFC Voltage Adjustment

1. Set the load on each output to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON. (short between CN7 pin-1 and pin-2).
4. Adjust the RV300 so that the voltage across C115 is 385 ± 2 V.

3-7-6. 5 V Adjustment

1. Set the load on each output to the minimum.
2. Apply 100 V AC.
3. Adjust the RV201 so that the voltage of STBY +5 V output (between CN7 pin-2 and pin-6) is 5.12 ± 0.03 V.

3-7-7. 13.5 V Adjustment

1. Set the load on each output to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON. (short between CN7 pin-1 and pin-2).
4. Adjust the RV250 so that the voltage of 13.5 V output (between CN7 pin-12 and pin-11) satisfies 13.7 ± 0.05 V.

3-7-8. VS Adjustment

1. Open the load on VS and VA outputs, and set the load on the other outputs to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON (short between CN7 pin-1 and pin-2), and also the VRR signal ON (short between CN4 pin-7 and CN7 pin-2).
4. Apply 0 V DC to the VRS (CN4 pin-3). Use CN4 pin-4 as GND.
5. Adjust the RV402 so that the voltage of VS output (between CN5 pin-2 and pin-6) is about 149 V.
6. Adjust the RV400 so that the voltage satisfies 149.2 V.
7. Adjust the RV402 so that the voltage satisfies 150 ± 0.1 V.
8. Apply 2 V DC to the VRS.
9. Check that the voltage satisfies 170 ± 0.3 V. If the measured value is out of the range, repeat the above steps from 4, where in step 6, shift the adjustment value a little, then check the voltage.

3-7-9. VS OCP

1. Set the load on each output to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON (short between CN7 pin-1 and pin-2), and also the VRR signal ON (short between CN4 pin-7 and CN7 pin-2).
4. Apply 0 V DC to the VRS (CN4 pin-3). Use CN4 pin-4 as GND.
5. Connect a voltmeter to the VS output (between CN5 pin-2 and pin-6).
6. Set the load on VS output to 3.8 A, and rotate the RV401 until the output voltage varies.

Note : Be careful, not to turn excssively, because power can not be obtained.

3-7-10. VA Adjustment

1. Open the load on VS and VA outputs, and set the load on the other outputs to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON (short between CN7 pin-1 and pin-2), and also the VRR signal ON (short between CN4 pin-7 and CN7 pin-2).
4. Apply 0 V DC to the VRA (CN4 pin-5). Use CN4 pin-6 as GND.
5. Adjust the RV602 so that the voltage of VA output (between CN5 pin-5 and pin-1) is about 49 V.
6. Adjust the RV600 so that the voltage satisfies 49.2 V.
7. Adjust the RV602 so that the voltage satisfies 50 ± 0.1 V.
8. Apply 2 V DC to the VRA.
9. Check that the voltage satisfies 70 ± 0.3 V. If the measured value is out of the range, repeat the above steps from 4, where in step 6, shift the adjustment value a little, then check the voltage.

Note : As the output voltage varies according to the voltage applied to the VRA, do not shift the applied voltage (2 V DC).

3-7-11. VA OCP

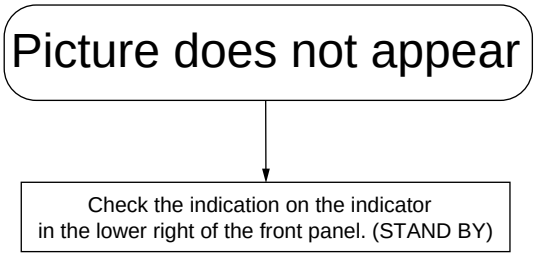
1. Set the load on each output to the minimum.
2. Apply 100 V AC.
3. Turn the $\overline{\text{STBY}}$ signal ON (short between CN7 pin-1 and pin-2), and also the VRR signal ON (short between CN4 pin-7 and CN7 pin-2).
4. Apply 0 V DC to the VRA (CN4 pin-5). Use CN4 pin-6 as GND.
5. Connect a voltmeter to the VA output (between CN5 pin-5 and pin-1).
6. Set the load on VA output to 4.4 A, and rotate the RV601 until the output voltage varies.

Note : Be careful, not to turn excssively, because power can not be obtained.

Section 4
Trouble Shooting

4-1. Judging Method When Image Does Not Appear

1. Flow chart



STBY LED flashes

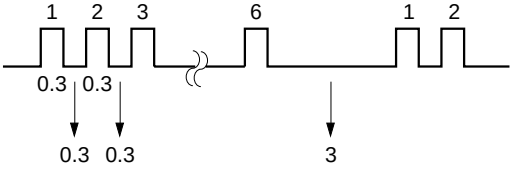
2 times X SUS TEMP (DD CON)

3 times Y SUS TEMP (I/O Block)

4 times Center TEMP

5 times Digital 5V

6 times PANEL FAIL (PDP)



When the STBY LED does not flash, the power supply circuit is defective.

2. How to find PDP unit trouble

1) The power must be supplied normally to the PDP unit. This power is supplied through two black 8-pin connectors from the power unit. The kinds of power supply are 160 V line, 60 V line, and 5 V line.

2) As input signals, H.SYNC (negative polarity), V.SYNC (negative polarity), BLANKING (negative polarity), CLOCK and RGB digital data (8 bit × 3) must be entered normally and DISPEN must be “high”.

   If no images appears through the above conditions are satisfied, the PDP unit will be defective.

4-2. Self Diagnosis Function

4-2-1. Outline

The PFM-42B1/B1E has the self diagnosis function using A/D converter to detect the power supply analog voltages, 8 channels of temperature sensor, fan operations, power unit temperature, DC voltage status, and to check the EEPROM and the watch register. When any abnormality occurs or defect is detected, the standby indicator on the control panel flashes and the detected data is displayed on the service menu [STATUS/TEST] block. If the abnormal status exceeds the allowable limit, the PFM-42B1/B1E is forced to shut down.

The detection items are shown as follows.

1. Increase and decrease of the panel DC voltage Vs is detected.
2. Increase and decrease of the panel DC voltage Va is detected.
3. Increase of temperature at the I/O block on top of the panel is detected. Shut down of machine.
4. Increase of temperature at the center in the top of the panel is detected. Shut down of machine.
5. Increase of temperature at the DC-DC converter on top of the panel is detected. Shut down of machine.
6. Temperature at the left side of the panel is detected.
7. Detection of fan stop and that of drive circuit failure.
   * Two fans at the bottom of the panel and the four fans for power supply circuit. One fan in the I/O block.
8. Detection of temperature rise in the power supply block.
9. Shut down when the 5 V for internal digital circuit has abnormality.
10. Detection of failure of the EEPROM.
11. Detection of abnormality in communication with scan converter.
12. Detection of failure in the ON/OFF control of power supply.
13. Detection of decreased backup power supply voltage for watch and detection of abnormality in oscillator.
14. Detection of PDP failure using the combination of the voltage detection and shut down of the machine.

4-2-2. Criteria for Judgment of Abnormality

1. Increase and decrease of the panel DC voltage Vs is detected.
   (Name of this function on the service menu : POWER SUPPLY - PDP VS)

   The normal operating range is + 160 V + 24 V/− 22 V.
   Warning of increase of the voltage Vs when 184 V or more.
   Warning of decrease of the voltage Vs when 138 V or less.

2. Increase and decrease of the panel DC voltage Va is detected.
   (Name of this function on the service menu : POWER SUPPLY - PDP VA)
   The normal operating range is + 60 V + 15 V/− 14 V.
   Warning of increase of the voltage Va when 75 V or more.
   Warning of decrease of the voltage Va when 46 V or less.

3. Increase of temperature at the top of the I/O block in the top of the panel is detected and shut down of the machine.
   (Name of this function on the service menu : TEMPERATURE - I/O BLOCK TOP)
   The normal operating range is up to 79 °C.
   Warning of high temperature when 80 °C or higher.
   Shut down at the temperature of 85 °C or higher .

4. Increase of temperature at the center in the top of the panel is detected and shut down of the machine.
   (Name of this function on the service menu : TEMPERATURE - CENTER)
   The normal operating range is up to 74 °C.
   Warning of high temperature when 75 °C or higher.
   Shut down at the temperature of 80 °C or higher .

5. Increase of temperature at the rear of the PDP and DC-DC converter block is detected.
   (Name of this function on the service menu : TEMPERATURE - DD CON TOP)
   The normal operating range is up to 84 °C.
   Warning of high temperature when 85 °C or higher .
   Shut down at the temperature of 90 °C or higher.

6. Detection of at the left side of panel temperature
(Name of this function on the service menu : TEMPERATURE - PANEL SIDE)
Occurrence of abnormality and fault is judged solely from the internal temperature of the PFM-42B1/B1E. Measurement of the ambient temperature aims mainly at the confirmation of the operating environment. Therefore, there is no chance to indicate this warning message.
Warning of high temperature at 85 °C or higher.

7. Detection of fan stop and that of drive circuit failure.
• Detection if fan is stopped or not.
(Name of this function on the service menu : FAN)
Status of the respective fans are displayed as OK or NG on the service menu STATUS.

```
FAN
  DRIVE CIRCUIT      : OK
  • B BOARD          : OK
  • P/S BLOCK TOP    : OK
  • P/S BLOCK MID    : OK
  • P/S BLOCK LOW L  : OK
  • P/S BLOCK LOW R  : OK
  • DD CON SIDE      : OK
  • I/O BLOCK SIDE   : OK
```

• Detection of fan drive circuit failure
(Name of this function on the service menu : FAN - DRIVE CIRCUIT)
The warning when the fan drive data is 6 V or more and the actual drive voltage is 2 V or less : warning

8. Detection of temperature rise in the power supply block.
(Name of this function on the service menu : TEMPERATURE - P/S INTERNAL)
Warning of high temperature when temperature of the heat sink for main converter inside the power supply unit exceeds the allowable limit : warning

WARNING at 90 °C
Shut-down at 95 °C

9. Shut down when the 5 V for internal digital circuit has abnormality.
(Name of this function on the service menu : POWER SUPPLY - DIGITAL 5V)
The voltage that is input to pin-62 of the system controller (IC252) is detected.
Shut down when there is no input voltage :

10. Detection of failure of the EEPROM.
(Name of this function on the service menu : OTHERS)
Warning when communication with EEPROM cannot be performed normally.
• EEPROM ID code error : EEP ROM ID
• EEPROM data write error : EEP ROM SAVE
• EEPROM data read error : EEP ROM LOAD
• EEPROM failure : EEP ROM ACK

11. Detection of abnormality in communication with scan converter.
(Name of this function on the service menu : OTHERS)
Warning when communication with scan converter cannot be performed normally.
PW164ACK

12. Detection of failure in the ON/OFF control of power supply.
(Name of this function on the service menu : Nil)
When the digital 5 V power does not decrease even in the STBY state, the machine enters the POWER ON state automatically.

13. Detection of decreased voltage of the backup power supply for watch and detection of abnormality of oscillator.
(Name of this function on the service menu : OTHERS)
Normal/abnormal is detected from the register value inside the watch IC.
• Initialization of time due to abnormal register value : RTC INITIALIZE
• Warning of low voltage of backup power supply : RTC BATTERY
• Warning that crystal oscillator for watch has stopped : RTC XTAL

14. Detection of PDP failure.
(Name of this function on the service menu : Nil)
PDP is suspected to be defective when DIGITAL 5 V is normal among the voltages (VS, VA, DIGITAL 5 V) required to drive PDP while both VS and VA are not inputted.
When all the following conditions are satisfied, the machine enters once to the STANDBY mode then turn the main power back on again.
    1) DC 180 V power is 40 V or less.
    2) DC 70 V power is 20 V or less.
    3) DIGITAL 5 V is normal.

The above-described operation is repeated three times. If the above three conditions are still satisfied, the PDP is judged to be faulty and the main power is shut down.

Spare Parts

6-1. Notes on Repair Parts

NOTE :

The components identified marked ⚠ are critical for safety.
Replace only with the part number specified.

Les composants identifiés par la marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

- Items marked " * " and parts marked with " o " at SP (Supply Code) column of the spare parts list are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.

RESISTORS
- All resistors are in ohms.
- F: nonflammable
- METAL: Metal-film resistor
- METAL OXIDE: Metal oxide-film resistor

Diagrams

Note:

- Parts marked " * " differ according to the model/destination. Refer to the mount table for each function.
- The parts marked " # " on schematic diagrams are not mounted.
- All capacitors are in μF unless otherwise noted. pF: μμF 50WV or less are not indicated except for electrolytics.
- All electrolytics are in 50 V unless otherwise specified.
- : fusible resistor
- : nonflammable resistor
- Δ : internal component
- : panel designation and adjustment for repair
- Caution when replacing chip parts
  New parts must be attached after removal of the chip.
  Be careful not to heat the minus side of a tantalum capacitor, because it is easily damaged by the heat.

Reference information

	ALR	: HIGH RIPPLE

[Measuring conditions, voltage and waveform]

- A voltage value is the reference value between the measurement point and the earth, when the NTSC color bar signal, RGB color bar signal and YUV signal are received from the color bar generator (digital multi-meter used: 10 M ohms/V DC).
- Unit of voltage is V (volt).
- : B+line
- : B– line
- Voltage variations may occur due to normal production tolerances.
- No mark : RGB color bar signal.
- Circled numbers indicate the reference waveform.
- : Signal path.

The components identified marked ⚠ are critical for safety.
Replace only with the part number specified.

Les composants identifiés par la marque ⚠ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer :

Check the metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA. Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers’ instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The “limit” indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

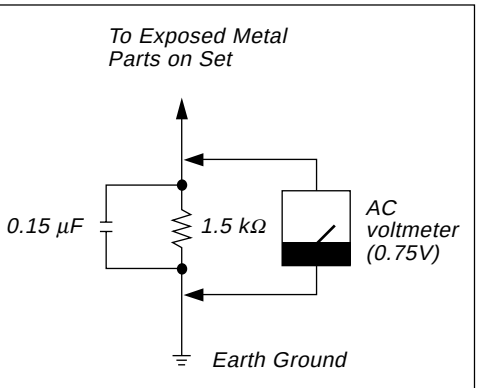

Fig A. Using an AC voltmeter to check AC leakage.
