Complete, Easy-to-install Kit for Flat Screen TVs

NEW!

Arlington's new TVBR2505K **TV Bridge™** includes TWO recessed power/low voltage combo boxes and all the connections you need (except for NM cable) to install a flat screen TV in an existing wall.

The best part is there's no need to run cable from a panel box – or cut holes in your framing members. Just cut two holes in the wall and access power from an existing, nearby source.

- Fast, easy, convenient – saves time and money!
- Secure installation. Good looks. A great finish.

All wires stay hidden behind the wall – no messy wires running down the wall from TV to components.

Plugs stay inside the electrical box – don't protrude past the wall.

- Mounting wings hold boxes securely against wall when screws are tightened.
- Paintable trim plate
- 18.0 cubic inch recessed boxes

TV Bridge™

NEW!

Easy Installation in Existing Walls

Components are not energized until the flexible cord is plugged in. Do not plug in until all other wiring is complete.

- 1 Locate wall studs to position TV Bridge™ between studs.
- 2 Position the upper box behind (or close to) the installed TV bracket. Position lower box within 3-1/2 ft. of the existing receptacle or power conditioner that will power the installation. Install upper box and lower box in the same stud cavity.
- 3 Pull a length of NM cable long enough to reach both boxes. Pull low voltage, coaxial, speaker wires, etc. before installing the boxes.
- 4 Install NM cable through the installed cable connector. Attach the boxes securely to the wall by tightening the two wing screws.
 

- 5 Wire the duplex receptacle and install it in the upper box.
- 6 Install LPCG50W cord grip onto the flexible cord, then install into the KD4550 using supplied locknut.
- 7 Connect the cord conductors to corresponding conductors of NM cable installed in the lower box. Install wire nuts.
- 8 Install KD4550 assembly to the lower box. Mount the CED13 cable entry device or CED1 entrance hood to the low voltage sides of both boxes (machine screws supplied).
- 9 Install cover plates.
- 10 Connect TV power cable to the installed duplex outlet in the upper box. Make low voltage connections.

Note:

- This product is not designed to be an extension of a structure's hard wiring.
- Components are not energized until the flexible cord is plugged in. Do not plug in until all other wiring is complete.
