Benefits

Produce sharp, high resolution images, great detail, and better transition between images

Digitally combines two fields of video into one high-resolution image frame. Creating a smooth film-like appearance.

Separates black-and-white detail from color information to virtually eliminate edge crawls and rainbow effects while enhancing picture resolution.

Digitally optimizes convergence for the sharpest picture possible.

Auto-adjusting inputs allow a wide array of component compatible equipment (e.g. DVD/ Satellite) to be connected simultaneously. Helps simplify hook-up process.

Uses the TV's left & right speakers to simulate surround sound and create a "live performance" experience.

Two dual-cone speakers with 10 watts per channel amplification.
