Main Features

- Refined design with maximum comfort and durability
- Professional sound quality providing clear audio reproduction
- Rotating Arm Structure
- Includes two interchangeable cords
- Available in red, black, white, green, and violet

FEATURES

1 Refined Design With Maximum Comfort And Durability

The HDJ-500 DJ headphones adapt the styling and performance cues of Pioneer's top-of-the-line HDJ-2000 headphones. Designed with maximum comfort and durability in mind, the HDJ-500 uses comfortable urethane pads for the ears that allow the headphones to mold around the user's head and ears for a snug and slip-resistant fit. Furthermore, the urethane pads are wrapped in great quality leather, providing greater feel and extended comfort. The main structure of the headphones is crafted of magnesium alloy for light weight and durability, making them great for travel and long periods of use.

2 Professional Sound Quality Providing Clear Audio Reproduction

The HDJ-500's stylish design is matched with professional sound quality providing clear audio reproduction, especially in the critical low and mid frequency ranges that are key for remixing. By combining 40 mm diameter drivers, thick 19 µm (micrometers) diaphragm and a copper clad aluminum wire (CCAW) voice coil, the headphones can efficiently reproduce the lower frequency audio range. Snare and kick drum sounds are more clear making it easier for even the most novice DJs to match the tempo of tracks.

3 Colors to Match Any Style

The HDJ-500 DJ headphones are available in five vibrant colors, allowing every dj the ability to express their individual style and personality. These five colors also match the colors of Pioneer's DDJ-WeGO compact DJ controller for a complete custom look and feel.

4 Rotating Arm Structure

For maximum flexibility during performances, the HDJ-500 features a rotating arm structure that allows the user to rotate the right earpiece forward and back by as much as 60 degrees. At that position, the flexible headband maintains enough side pressure to allow the DJ to listen to audio on just one side of the headphones.

5 Includes Two Interchangeable Cords

The headphones include two interchangeable cords providing freedom of movement during performances. The traditional 1.2 meter coiled cord (extends to 3m) is perfect for regular DJ performances, while the 1 meter straight cord is ideal for leisure listening.
