

ON Power Mode Operation

If you want to manually operate your IllumiNite Plus™, use the Off-On modes on the selector switch. Turn the IllumiNite Plus™ On and Off manually each night and day or during a power outage.

Limitations/Warnings

- For indoor use only
- If outlet is normally controlled by a wall switch, leave wall switch on when using the IllumiNite Plus™ Auto mode.
- For maximum battery run time, allow battery to charge for 24 hours before first use without AC power.
- Conforms to UL 1786, Certified to CSA C22.2 No. 256-05

Warranty

3 year limited warranty. See website for details.

45195

DESCRIPTION

The Hunter IllumiNite Plus™ Multi-Use Light provides light automatically everyday as a night light or during power outages. Perfect for any room in the home, it provides hours of convenient light during power outages, for peace-of-mind.

The IllumiNite Plus™ plugs into a standard household outlet and can be set to illuminate manually or automatically through a photocell sensor. When AC power fails, the IllumiNite Plus™ back-up battery provides super bright LED light. You can unplug the IllumiNite Plus™, fold the plug, and use it as a flashlight or on a tabletop for area light.

When AC power is restored, the IllumiNite Plus™ automatically begins recharging for future use. In the event of a daytime power outage, the photocell senses ambient room light to prevent LEDs from turning on and saving battery life.

Features

- For indoor use only
- Can automatically illuminate up to three super bright LEDs when power fails
- Provides daily use as a night light or flashlight
- Photocell turns LEDs on at night and off during the day.
- Provides adjustable lighting levels and battery-saving functionality during power outages:
 - o One LED provide up to 16 hours of light.

IllumiNite Plus™ Multi-Use Light

- o Three LEDs provide up to 10 hours of light.
- o Four LEDs provide up to 8 hours of light.
- Built-in rechargeable batteries never need replacing and automatically recharge when power is restored.

AUTO Power Mode Operation (recommended)

If you want your IllumiNite Plus™ to turn on automatically each night or in the event of a power outage, slide the selector switch to Auto. When the photocell senses darkness it automatically turns the lights on. On Auto, the LEDs automatically illuminate in the event of a nighttime power failure, and the photocell prevents lights from turning on during a daytime power failure.

In the event of a power outage only one LED illuminates in Auto. This feature saves battery life in case you are asleep or away from home during the power outage. To use more LEDs during a power outage, slide the selector switch to On and choose your LED preference.
