Jamo A 30 CEN

Despite its compact size the A 30 CEN features a two-way drive unit arrangement with two woofers and a tweeter. The supplied bracket makes it possible to place the speaker almost anywhere— on a wall, on a shelf or on top of a TV.

The A 30 series of loudspeakers is a thorough update of the successful A 3_5 series. The major change is the introduction of an improved

cabinet material. Thanks to a new specially developed high-density ABS plastic the new series is now twice as heavy as the previous models. It's a change that has resulted in a clearly audible sonic improvement.
