# Release Notes

## Digital Sentry 4.2 and DS ControlPoint 1.7 Release

Integral Digital Sentry® DS ControlPoint is designed for Windows® XP Professional or Windows Vista® running on Intel® or compatible processors. Microsoft® no longer supports Windows 2000; therefore, DS ControlPoint is no longer supported by Pelco on the Windows 2000 platform.

For information about installing and using DS ControlPoint software, refer to the Digital Sentry ControlPoint Operation manual or the ControlPoint online Help. A printable PDF version of the manual is included on the resource disc.

Please note that DS ControlPoint is now a Pelco product. For additional information on DS ControlPoint (including the latest updates to DS ControlPoint related documentation, product specifications, software downloads, and so forth), visit the Pelco Web site at [www.pelco.com](http://www.pelco.com).

**NOTE:** For technical issues, contact Pelco Product Support at 1-800-289-9100 (USA and Canada) or +1-559-292-1981 (international).

## 6.8.2 Maintenance Release

### ControlPoint Improvements and New Features

- Added a feature to export from DX Series products (DX8000, DX8100, and DX4500/DX4600).
- Added a feature to control PTZ using Endura Encoder.
- Added a feature to correctly scale 2CIF exports to 4CIF.
- Added a bandwidth display to monitor video bandwidth.
- Added a bandwidth throttling feature.
- Added an alarm popup feature.
- Added a DS Reports feature.
- Added a feature to set patterns and presets in ControlPoint using the KBD300A.
- Added a feature for maximum login attempts. If the maximum login attempts exceed the number set in ControlPoint, the user ID is not disabled.
- Added a feature to enable/disable audio for selected panels.
- Added a feature that allows audio to be played on the same pane as video.
- Added support for associated audio in system groups.
- Improved the refresh rate for video panes when users enter or exit full-screen mode.
- Improved the PTZ performance of the KBD300A.
- Updated the Czech and French translations.
- Added Turkish and Polish translations.

### ControlPoint Major Fixes

- Fixed the Smart Search Export.
- Enabled pattern and preset call up functionality using the KBD300A in modes other than PTZ mode.
- Fixed an audio issue when dragging over multiple cameras.
- Fixed a crash issue when using the PREV and NEXT buttons on the KBD300A.
- Fixed an issue with the password reset feature in DSAdmin; users can continue to connect using the same ID without changing their password in ControlPoint.
- Improved the button sizes in the French translations.
- Fixed the crash issue that periodically occurs after the computer is unlocked.

## **DSAdmin Improvements and New Features**

- Added a feature to make the number of presets to be consistent between PTZ Tours and the number that can be set.
- Added an associated audio feature for IP cameras.
- Added a feature to the DSAdmin/Client software package that allows the user to install the DS Client rather than installation by default.

## **Server/VAU Improvements and New Features**

- Added multiple channels for Panasonic® encoders.
- Improved the frame rate for Arecont cameras.
- Improved the frame rate when recording Pelco cameras with Sarix™ technology at MJPEG compression.
- Added MJPEG support for Pelco IP110 and IP3701 cameras.
- Added Bosch® camera support using MPEG4.
- Added support for Bosch FlexiDome and Corner-Mount cameras.
- Changed the default drive for new installations.
- Added support for DVTel® cameras.

# Digital Sentry 4.2 and DS Control Point 1.6 Release

## Improvements and New Features

- Modified the DS ControlPoint installer to include all language packs.
- Added a feature to drag audio onto video.
- Improved the refresh rate for video panes when users enter or exit full-screen mode.
- Updated the Arecont SDK to version 2.7.3 to support AV8185 and AV8365.
- Added support for changing KBD300A com ports through the local cache.
- Added a feature to drag and drop cameras in Search/Quick Review mode.
- Added a feature to change layouts and rearrange camera windows while in Search/Quick Review mode.
- Added a feature to display cameras in the first available window by double-clicking the camera name.
- Modified PTZ controls for clarity.
- Added camera pattern support and camera auxiliary functions for DX8100, Spectra® IP domes (Pelco D), and Pelco D (no parity) PTZ drivers.
- Obscured audio sources that are not enabled in DS ControlPoint.
- Added access to audio sources by double-clicking the audio source name.
- Added a feature to scroll through cameras using the Next and Previous buttons on the KBD300A.
- Added a feature to record more than one video stream from an IP camera.
- Added drivers for additional Arecont IP cameras.
- Modified the export process and button text for consistency.

## Major Fixes

- Fixed an issue with Panasonic® cameras that cannot use MPEG-4 because they use a less common VOL.
- Fixed an issue with viewing channels 2 through 4 on Panasonic WJ-NT304.
- Fixed an issue with the VideoServer startup delays.
- Fixed an issue with GUI lock-ups that are related to repeated fast-forward keystrokes on DX4600 systems.
- Fixed the AssociatedAudioChannel property for cameras so that audio is associated automatically.
- Fixed the digital zoom issue that displayed old images while playback video was paused.
- Fixed an issue regarding audio associations for IP cameras.
- Fixed PTZ issues in full screen mode.
- Fixed text display issues in full screen mode.
- Fixed issue that prevents right-clicking to select multiple video windows.
- Fixed latency issues in DX4500/DX4600 support.
- Improved the speed at which the OSD Settings window opens.
- Resolved issue with multiple network interface cards (NICs) when connecting to certain Pelco IP cameras.
- Fixed system disconnect issues.
- Added a feature that automatically selects a System Type on the Add/Edit System page to prevent error messages and increase the connection speed.
- Improved AVI and MPEG export.
- Fixed Transactional Data system IP address issue that prevents connection.
- Modified motion detection algorithms.
- Extended the time-out period when connected to DX Series systems.
- Fixed DX8100 crash issue.
- Fixed issues when connecting to multiple DX Series systems with the same IP address.
- Added AVI export options in resolutions other than 320 x 240.
- Eliminated error messages when upgrading from certain previous versions.
- Added support for Pelco IP cameras and Endura encoders over a wide area network (WAN).

# DS ControlPoint 6.7.1 Maintenance Release

## Improvements and New Features

- Added a drop-down box to select the system port based on System Type.
- Added support for separate username and password per system.
- Added error messages to indicate failed connections.
- Added a feature to use mouse to control systems connections.
- Simplified the naming convention for system tours.
- Added a feature to use the mouse to edit tour items.
- Added alphabet sort for cameras and systems in the secondary navigation pane.

## Compatible DX Series Software

- DX8000 version 2.0
- DX8100 versions 1.1 and 1.2
- DX4500/DX4600 version 1.2.4.0018

## ControlPoint Major Fixes

- Systems are no longer "pinged" before a connection is attempted.
- Labels have been modified to overlap properly.
- Resolved white image issues with the OSD Editor.
- No longer have to close the edit tab and re-edit a tour to add items to a new tour.
- PTZ control functionality now resembles the DSAdmin PTZ control.
- When modifying a DS search in ControlPoint, the recorder time is now displayed (rather than time in GMT) when recorder time is the setting.
- Resolved the resize issue with the system type drop-down box.
- Corrected the use of multiple preset names for a single preset number.
- Restricted the drag cameras feature to users with the Recorded Video Viewer permission.
- Resolved crash issue when searching video on a DS system without permission.
- Updated ControlPoint to support Windows XP 64-bit systems.
- Corrected the default overlapping of certain OSDs and improper display issues.
- Systems no longer appear to be disconnected when they are actually connected.
- Resolved system crash problems when dragged to a Search video pane.
- The print icon is only available for users without the Print User permission.
- Corrected the inability to connect to a system through a standard port.
- Corrected the display of a system in the navigation pane when ControlPoint cannot determine the system type.
