

TX-SR500

Basic Operation Guide

Introduction

- This Guide describes basic operation of this receiver and connected devices (CD, DVD etc.). For further information about the advanced functions of this receiver, please refer to the main instruction manual.
- This Guide does not explain connection details for the unit's rear panel. Please refer to pages 10-16 of the main instruction manual for correct connection information. Otherwise, the entire A/V system may not work properly.
- A remote controller is used in the examples described here. For more information on the remote controller, refer to the main instruction manual.

Enjoying audio and visual sources

Important notes

- If MUTING function is activated, the sound will be muted. Make sure MUTING is set to OFF.
- If the headphones are connected, no sound will be heard from the speakers. Do not connect headphones if you wish to listen to the sound from the speakers.

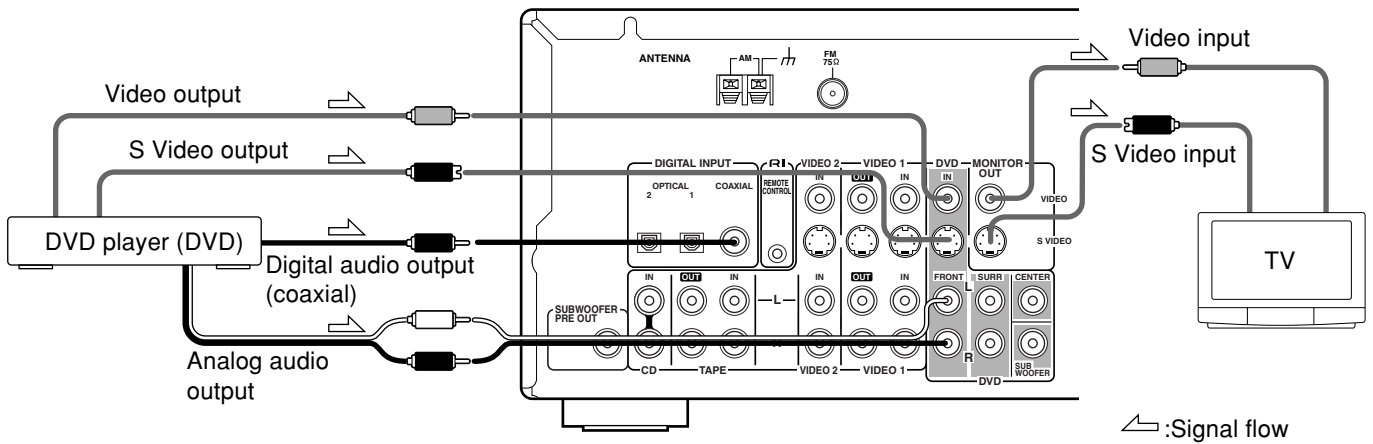

To enjoy surround sound, place the speakers properly as described in "Positioning speakers/Connecting speakers" on pages 12-13, and make necessary settings as described in "Speaker setup" on pages 18-20.

Enjoying DVD

1. Make sure that connections have been made correctly for the monitor TV and the DVD Player.

If no sound is heard

Refer to the following table for the cause and corrective action. There may be a problem with a connected device. Refer to the user's guide of the connected device and make sure that all connections have been made correctly.

The power is turned on but no sound is heard.	The input signal format does not match the audio selection (PCM, DTS, or Multich). 	Check the connector being used and select an appropriate audio option (Auto or Analog). (See page 28 of the main manual.)
	The speaker select switch setting is incorrect. 	Match the speaker select switch setting to the speakers you are using. (See page 26 of the main manual.)
	The MUTING indicator flashes. 	Press the MUTING button to turn off the MUTING indicator. (See page 26 of the main manual.)
	Connections are incorrect. 	Make sure that all connections are made correctly. (See pages 10-16 of the main manual.)
The power is not turned on, and no sound is heard.	The power is disconnected from the AC outlet. 	Plug the power cable to the AC outlet securely.
	External noise has affected the internal CPU. 	Unplug the power cable from the AC outlet, wait five seconds, then plug it again.
