

# SolarSpot

**Illuminate outside features without cables.** The SolarSpot comprises two circular wireless spotlights powered by solar energy. The lamps charge up during daylight and automatically turn on when it gets dark. They are ideal for decorative feature illumination as well as functional lighting on steps and alongside pathways. SolarSpot is also the perfect solution for making a garden or terrace more attractive without having to install cables. It can easily be placed in the ground, gravel or grass and gives many hours light.
