# Dell Display Manager User's Guide

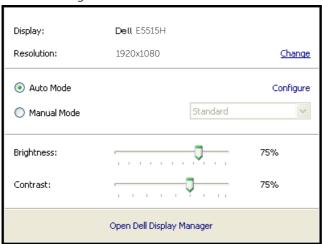

#### Overview

Dell Display Manager is a Windows application used to manage a monitor or a group of monitors. It allows manual adjustment of the displayed image, assignment of automatic settings, energy management, image rotation and other features on select Dell models. Once installed, Dell Display Manager will run each time the system starts and will place its icon in the notification tray. Information about monitors connected to the system is always available when hovering over the notification tray icon.

# **Using the Quick Settings Dialog**

Clicking Dell Display Manager's notification tray icon opens the Quick Settings dialog box. When more than one supported Dell model is connected to the system, a specific target monitor can be selected using the menu provided. The Quick Settings dialog box allows convenient adjustment of the monitor's Brightness and Contrast levels, Preset Modes can be manually selected or set to Auto Mode, and the screen resolution can be changed.

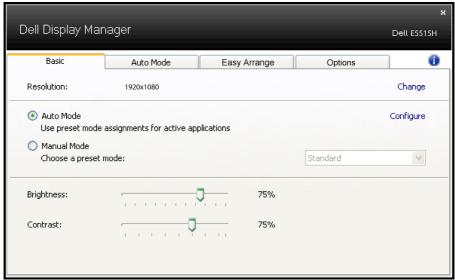

The Quick Settings dialog box also provides access to Dell Display Manager's advanced user interface which is used to adjust Basic functions, configure Auto Mode and access other features.

#### **Setting Basic Display Functions**

A Preset Mode for the selected monitor can be manually applied using the menu on the Basic tab. Alternatively, Auto Mode can be enabled. Auto Mode causes your preferred Preset Mode to be applied automatically when specific applications are active. An onscreen message momentarily displays the current Preset Mode whenever it changes.

The selected monitor's Brightness and Contrast can also be directly adjusted from the Basic tab.

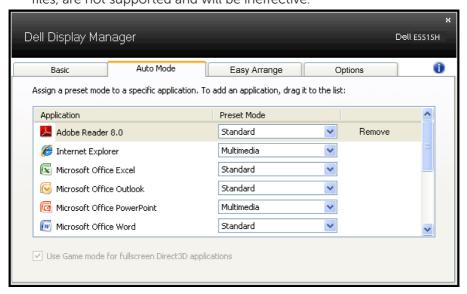

# **Assigning Preset Modes to Applications**

The Auto Mode tab allows you to associate a specific Preset Mode with a specific application, and apply it automatically. When Auto Mode is enabled, Dell Display Manager will automatically switch to the corresponding Preset Mode whenever the associated application is activated. The Preset Mode assigned to a particular application may be the same on each connected monitor, or it can vary from one monitor to the next.

Dell Display Manager is pre-configured for many popular applications. To add a new application to the assignment list, simply drag the application from the desktop, Windows Start Menu or elsewhere, and drop it onto the current list.

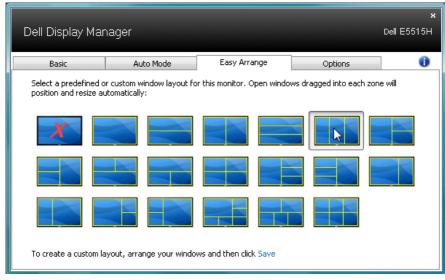

**NOTE**: Preset Mode assignments targeting batch files, scripts, and loaders, as well as non-executable files such as zip archives or packed files, are not supported and will be ineffective.

# **Organizing Windows with Easy Arrange**

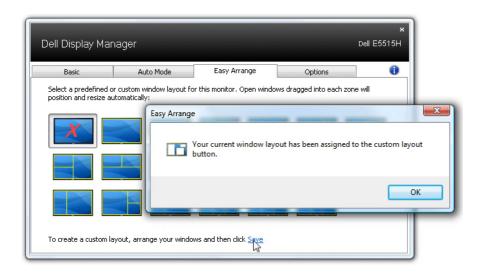

Some Dell models feature Easy Arrange, which allows the selected monitor's desktop to be organized into various predefined or custom window layouts. When Easy Arrange is enabled, windows can easily be made to reposition and resize automatically to fill specific regions within a window layout.

To get started with Easy Arrange, choose a target monitor and select one of the predefined layouts. The regions for that layout will be displayed momentarily on the monitor. Next, drag an open window across the monitor. While the window is being dragged, the current window layout will be displayed and an active region will be highlighted as the window passes over it. At any time, drop the window into the active region and it will automatically resize and reposition to fill that region.

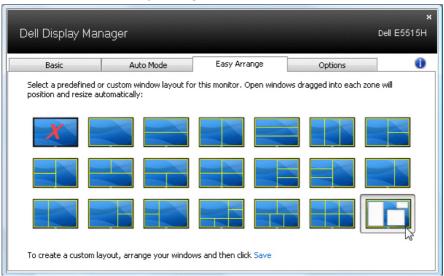

To create a custom window layout, first size and position up to 10 windows on the desktop and then click the Save link in Easy Arrange. The size and position of thewindows is saved as a custom layout and the custom layout icon is created.

**NOTE:** The application that owns each window is not saved in the custom layout. Only the size and position of the windows is saved.

To use the currently saved custom layout, select the custom layout icon. To save a new custom layout, first postion and size up to 10 windows on the desktop andthen click the Save link in Easy Arrange. To delete the currently saved custom layout, close all windows on the desktop and then click the Save link in Easy Arrange.

# **Applying Energy Conservation Features**

On supported Dell models the PowerNap tab will be available to provide energy conservation options. When the screensaver activates, the monitor's Brightness can automatically be set to minimum level or the monitor can be put to sleep in order to save additional power.

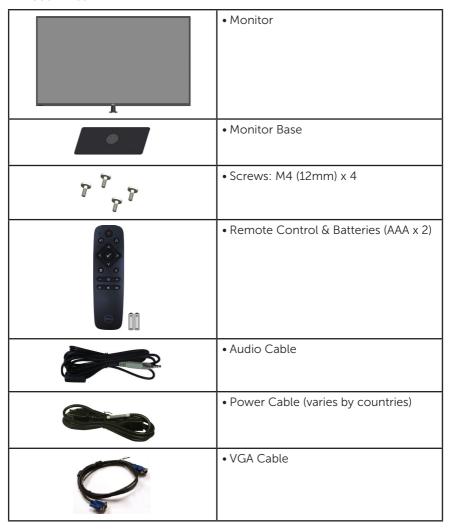

# **About Your Monitor**

#### Inserting the batteries in the remote control

The remote control is powered by two 1.5V AAA batteries.

To install or replace batteries:

- 1. Press and then slide the cover to open it.
- **2.** Align the batteries according to the (+) and (–) indications inside the battery compartment.
- 3. Replace the cover.

# **⚠** CAUTION:

The incorrect use of batteries can result in leaks or bursting. Be sure to follow these instructions:

- Place "AAA" batteries matching the (+) and (-) signs on each battery to the (+) and (-) signs of the battery compartment.
- Do not mix battery types.
- Do not combine new batteries with used ones. It causes shorter life or leakage of batteries.
- Remove the dead batteries immediately to prevent them from liquid leaking in the battery compartment. Don't touch exposed battery acid, as it can damage your skin.

#### Handling the remote control

- Do not subject to strong shock.
- Do not allow water or other liquid to splash the remote control. If the remote control gets wet, wipe it dry immediately.
- Avoid exposure to heat and steam.
- Other than to install the batteries, do not open the remote control.

#### Operating range of the remote control

Point the top of the remote control toward the LCD monitor's remote sensor during button operation.

Use the remote control within a distance of about 8 m from remote control sensor or at a horizontal and vertical angle of within 15° within a distance of about 5.6 m.

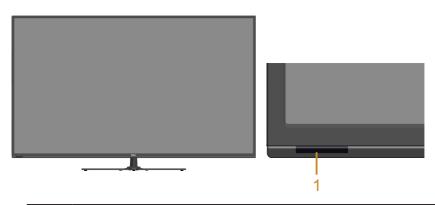

**NOTE:** The remote control may not function properly when the remote control sensor on the display is under direct sunlight or strong illumination, or when there is an obstacle in the path of signal transmission.

#### **Monitor Specifications**

The following sections give you information about the various power management modes and pin assignments for the various connectors of your monitor.

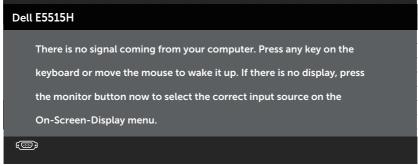

#### **Power Management Modes**

If you have VESA's DPM compliance display card or software installed in your PC, the monitor automatically reduces its power consumption when not in use. This is referred to as Power Save Mode. If the computer detects input from keyboard, mouse, or other input devices, the monitor automatically resumes functioning. The following table shows the power consumption and signaling of this automatic power saving feature:

VESA	Horizontal	Vertical	Video	Power	Power
Modes	Sync	Sync		Indicator	Consumption
Normal	Active	Active	Active	White	135 W (Maximum)**
operation					65 W (Typical)***
Active-off	Inactive	Inactive	Blank	Glowing	Less than 0.5 W
mode				white	
Switch off	-	-		Off	Less than 0.5 W*

<sup>\*</sup> Zero-power consumption in OFF mode can only be achieved by disconnecting the main cable from the monitor.

The OSD will only function in the normal operation mode. When any button except power button is pressed in Active-off mode, the following messages will be displayed:

<sup>\*\*</sup> Maximum power consumption with max luminance and contrast.

<sup>\*\*\*</sup> Typical power consumption with OSD default setting, audio and USB inactive.

Activate the computer and monitor to gain access to the **Using the On-**Screen Display (OSD) Menu.

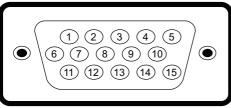

**NOTE:** The Dell E5515H monitor is ENERGY STAR®-compliant.

# **LCD Monitor Quality & Pixel Policy**

During the LCD Monitor manufacturing process, it is not uncommon for one or more pixels to become fixed in an unchanging state. The visible result is a fixed pixel that appears as an extremely tiny dark or bright discolored spot. When the pixel remains permanently lit, it is known as a "bright dot." When the pixel remains black, it is known as a "dark dot."

In almost every case, these fixed pixels are hard to see and do not detract from display quality or usability. A display with 1 to 5 fixed pixels is considered normal and within competitive standards. For more information, see Dell Support site at:

http://www.dell.com/support/monitors.

#### Maintenance Guidelines

#### **Caring for Your Monitor**

CAUTION: Read and follow the safety instructions before cleaning the monitor.

A CAUTION: Before cleaning the monitor, unplug the monitor power cable from the electrical outlet.

For best practices, follow the instructions in the list below while unpacking, cleaning, or handling your monitor:

- To clean your antistatic screen, slightly dampen a soft, clean cloth with water. If possible, use a special screen-cleaning tissue or solution suitable for the antistatic coating. Do not use benzene, thinner, ammonia, abrasive cleaners, or compressed air.
- Use a slightly dampened, warm cloth to clean the plastics. Avoid using detergent of any kind as some detergents leave a milky film on the plastics.
- If you notice a white powder when you unpack your monitor, wipe it off with a cloth. This white powder occurs during the shipping of the monitor.
- Handle your monitor with care as a darker-colored monitor may scratch and show white scuff marks more than a lighter-colored monitor.
- To help maintain the best image quality on your monitor, use a dynamically changing screen saver and power off your monitor when not in use.

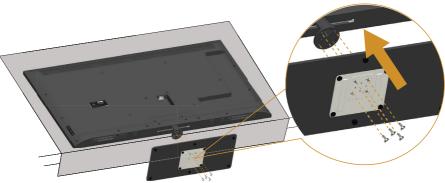

# **Setting Up the Monitor**

# **Attaching the Monitor**

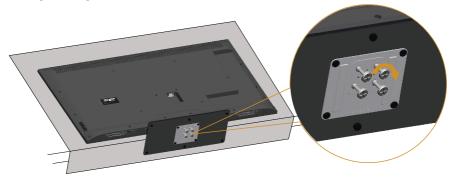

NOTE: The base is detached when the monitor is shipped from the factory.

To attach the monitor base:

- 1. Place the monitor on a flat surface.
- 2. Inserting the screws to the base.
- **3.** Tightening the screws.

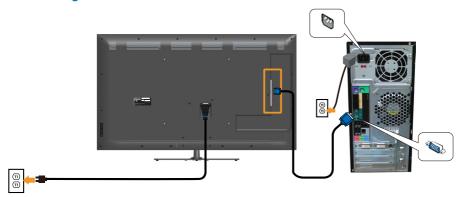

# **Connecting Your Monitor**

MARNING: Before you begin any of the procedures in this section, follow the <u>Safety Instructions</u>.

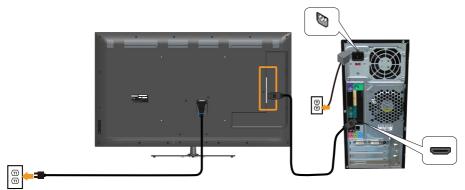

To connect your monitor to the computer:

- 1. Turn off your computer and disconnect the power cable.
- 2. Connect either the blue analog VGA or black HDMI display connector cable to the corresponding video port on the back of your computer. Do not use both cables on the same computer. Use both the cables only when they are connected to two different computers with appropriate video systems.

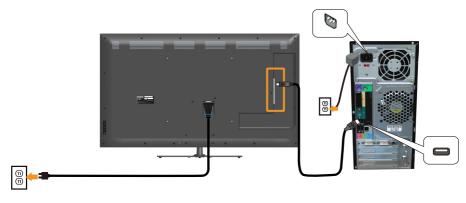

#### Connecting the blue VGA Cable

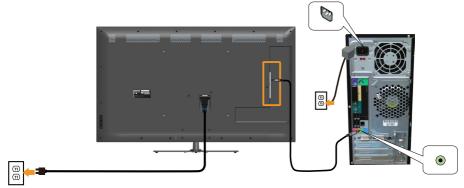

#### Connecting the black HDMI Cable

## Connecting the USB cable

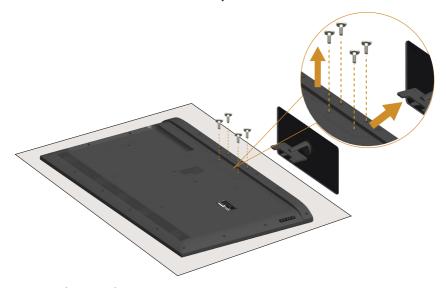

**NOTE**: The graphics are used for the purpose of illustration only. Appearance on the computer may vary.

# **Removing the Monitor Stand**

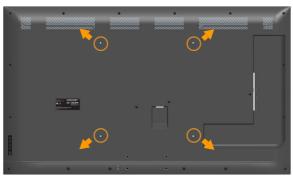

NOTE: To prevent scratches on the LCD screen while removing the stand, ensure that the monitor is placed on a soft, clean surface.

To remove the stand:

- 1. Place the monitor on a flat surface.
- 2. Release the screw located on the back cover.
- 3. Remove the stand from the monitor.

# Wall Mounting (Optional)

(Screw dimension: M6 x 30 mm).\*

\*Depending on your mounting solution, you may need longer than 30mm screw.

Refer to the instructions that come with the VESA-compatible base mounting kit.

- 1. Place the monitor panel on a soft cloth or cushion on a stable, flat table.
- 2. Remove the stand.
- **3.** Attach the mounting bracket from the wall mounting kit to the LCD.
- **4.** Mount the LCD on the wall by following the instructions that came with the wall mounting kit.
- NOTE: For use only with UL-listed wall mount bracket with minimum weight/load bearing capacity of 81.2 kg.

# **Operating the Monitor**

# **Power On the Monitor**

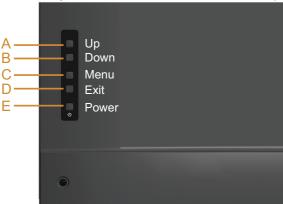

Press the **1** button to turn on the monitor.

# **Using the Function Controls**

**Use the keys** on the back of the monitor to adjust the image settings.

# **OSD Warning Messages**

When the monitor does not support a particular resolution mode you will see the following message:

This means that the monitor cannot synchronize with the signal that it is receiving from the computer. See <u>Monitor Specifications</u> for the horizontal and vertical frequency ranges addressable by this monitor. Recommended mode is 1920 x 1080.

You will see the following message before the DDC/CI function is disabled.

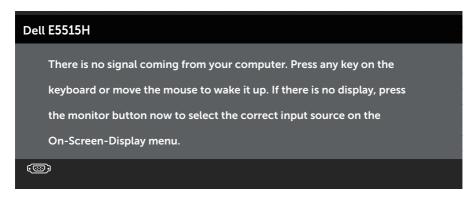

When the monitor enters the **Power Save** mode, the following message appears:

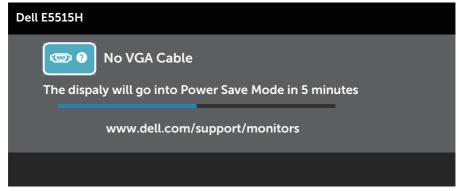

# Dell E5515H **Entering Power Save Mode.** (<del>(()</del>)

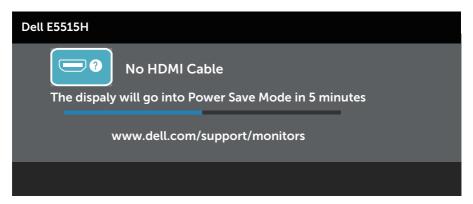

Activate the computer and wake up the monitor to gain access to the Using the On-Screen Display (OSD) Menu.

If you press any button other than the power button, the following messages will appear depending on the selected input:

If VGA or HDMI cable is not connected, a floating dialog box as shown below appears. The monitor will enter **Power Save Mode after 5 minutes** if left at this state.

See **Solving Problems** for more information.

# **Setting the Maximum Resolution**

To set the Maximum resolution for the monitor:

Windows® 7. Windows® 8/Windows® 8.1:

- 1. For Windows® 8/Windows® 8.1 only, select the Desktop tile to switch to classic desktop.
- 2. Right-click on the desktop and click Screen Resolution.
- **3.** Click the dropdown list of the screen resolution and select 1920 x 1080.
- 4. Click OK.

If you do not see 1920x 1080 as an option, you may need to update your graphics driver. Depending on your computer, complete one of the following procedures:

If you have a Dell desktop or portable computer:

• Go to www.dell.com/support, enter your service tag, and download the latest driver for your graphics card.

If you are using a non-Dell computer (portable or desktop):

- Go to the support site for your computer and download the latest graphic drivers.
- Go to your graphics card website and download the latest graphic drivers.

# **Troubleshooting**

MARNING: Before you begin any of the procedures in this section, follow the <u>Safety Instruction</u>

### Self-Test

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

- 1. Turn off both your computer and the monitor.
- 2. Unplug the video cable from the back of the computer. To ensure proper Self-Test operation, remove Digital (black connector), the Analog (blue connector) cables from the back of computer.
- **3.** Turn on the monitor.

The floating dialog box should appear on-screen (against a black background) if the monitor cannot sense a video signal and is working correctly. While in self-test mode, the power LED remains white. Also, depending upon the selected input, one of the dialogs shown below will continuously scroll through the screen.

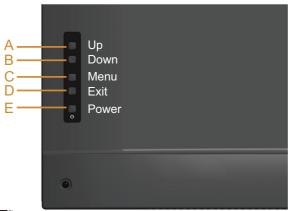

- 4. This box also appears during normal system operation, if the video cable becomes disconnected or damaged. The monitor will enter Power Save Mode after 5 minutes if left at this state.
- 5. Turn off your monitor and reconnect the video cable; then turn on both your computer and the monitor.

If your monitor screen remains blank after you use the previous procedure, check your video controller and computer, because your monitor is functioning properly.

**NOTE**: Self-test feature check is not available for S-Video, Composite, and Component video modes.

# **Built-in Diagnostics**

Your monitor has a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with your monitor, or with your computer and video card.

**NOTE**: You can run the built-in diagnostics only when the video cable is unplugged and the monitor is in self-test mode.

To run the built-in diagnostics:

- **1.** Ensure that the screen is clean (no dust particles on the surface of the screen).
- 2. Unplug the video cable(s) from the back of the computer or monitor. The monitor then goes into the self-test mode.
- **3.** Press and hold the **Button A** and **Button D** on the back cover simultaneously for 2 seconds. A gray screen appears.
- 4. Carefully inspect the screen for abnormalities.
- **5.** Press the **Button D** on the back cover again. The color of the screen changes to red.
- 6. Inspect the display for any abnormalities.
- 7. Repeat steps 5 and 6 to inspect the display in green, blue, black, white screens.

The test is complete when the white screen appears. To exit, press the **Button D** again.

If you do not detect any screen abnormalities upon using the built-in diagnostic tool, the monitor is functioning properly. Check the video card and computer.

## **Common Problems**

The following table contains general information about common monitor problems you might encounter and the possible solutions.

Common	What You	Possible Solutions	
Symptoms	Experience		
No Video/Power LED off	No picture	<ul> <li>Ensure that the video cable connecting the monitor and the computer is properly connected and secure.</li> <li>Verify that the power outlet is functioning properly using any other electrical equipment.</li> <li>Ensure that the power button is depressed fully.</li> </ul>	
No Video/Power LED on	No picture or no brightness	<ul> <li>Increase brightness &amp; contrast controls via OSD.</li> <li>Perform monitor self-test feature check.</li> <li>Check for bent or broken pins in the video cable connector.</li> <li>Ensure that the correct input source is selected via the Input Source</li> <li>Run the built-in diagnostics.</li> </ul>	
Poor Focus	Picture is fuzzy, blurry, or ghosting	Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. (For VGA source only) Eliminate video extension cables. Reset the monitor to Factory Settings. Change the video resolution to the correct aspect ratio (16:9).	
Shaky/Jittery Video	Wavy picture or fine movement	Perform Auto Adjust via OSD. (For VGA source only) Adjust the Phase and Pixel Clock controls via OSD. (For VGA source only) Reset the monitor to Factory Settings. Check environmental factors. Relocate the monitor and test in another room.

# **Setting Up Your Monitor**

## Setting the display resolution to 1920 x 1080 (Maximum)

For optimal display performance while using the Microsoft Windows operating systems, set the display resolution to 1920 x 1080 pixels by performing the following steps:

### In Windows® 7, Windows® 8/Windows® 8.1:

- 1. For Windows® 8/Windows® 8.1 only, select the Desktop tile to switch to classic desktop.
- 2. Right-click on the desktop and click Screen Resolution.
- **3.** Click the dropdown list of the screen resolution and select 1920 x 1080.
- 4. Click OK.

If you do not see 1920 x 1080 as an option, you may need to update your graphics driver. Please choose the scenario below that best describes the computer system you are using, and follow the provided

- 1: If you have a Dell desktop or a Dell portable computer with Internet access
- 2: If you have a non Dell desktop, portable computer, or graphics card

# If you have a Dell desktop or a Dell portable computer with Internet access

- **1.** Go to <a href="http://www.dell.com/support">http://www.dell.com/support</a>, enter your service tag, and download the latest driver for your graphics
- **2.** After installing the drivers for your graphics adapter, attempt to set the resolution to  $1920 \times 1080$  again.
- **NOTE**: If you are unable to set the resolution to 1920 x 1080, please contact Dell to inquire about a graphics adapter that supports these resolutions.

# If you have a non Dell desktop, portable computer, or graphics card

In Windows® 7. Windows® 8/Windows® 8.1:

- **1.** For Windows® 8/Windows® 8.1 only, select the Desktop tile to switch to classic desktop.
- 2. Right-click on the desktop and click Personalization.
- 3. Click Change Display Settings.
- **4.** Click Advanced Settings.
- **5.** Identify your graphics controller supplier from the description at the top of the window (e.g. NVIDIA, ATI, Intel etc.).
- **6.** Please refer to the graphics card provider website for updated driver (for example, <a href="http://www.ATI.com">http://www.NVIDIA.com</a>).
- **7.** After installing the drivers for your graphics adapter, attempt to set the resolution to  $1920 \times 1080$  again.
- **NOTE**: If you are unable to set the resolution to 1920 x 1080, please contact the manufacturer of your computer or consider purchasing a graphics adapter that will support the video resolution of 1920 x 1080.

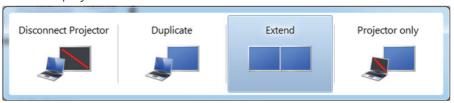

# Procedures for setting up dual monitors in Windows® 7 or Windows® 8/Windows® 8.1

### For Windows® 7

Connect the external monitor(s) to your laptop or desktop using a video cable (VGA, HDMI etc.) and follow any of the below setup method.

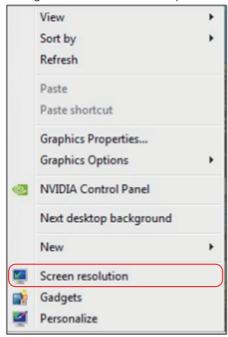

### Method 1: Using keyboard shortcut "Win+P"

- **1.** Press the **Windows logo key** + **P** on your keyboard.
- 2. While holding down the Windows logo key, press P to toggle between the display selections.

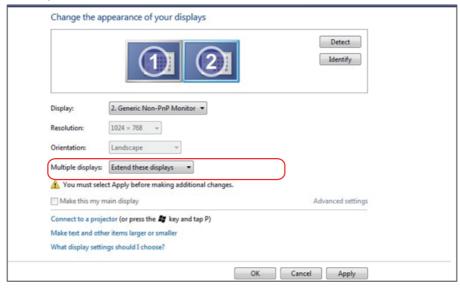

Method 2: Using the "Screen Resolution" menu

1. Right-click on the desktop and click Screen resolution.

- **2.** Click **Multiple displays** to choose a display selection. If you do not see the additional monitor listed, click **Detect**.
  - You may need to restart your system and repeat steps 1 to 3 if the system does not detect the added monitor.

#### For Windows® 8/Windows® 8.1

Connect the external monitor(s) to your laptop or desktop using a video cable (VGA, HDMI etc.) and follow any of the below setup method.

## Method 1: Using keyboard shortcut "Win+P"

- 1. Press the Windows logo key + P on your keyboard.
- 2. While holding down the Windows logo key, press P to toggle between the display selections.

### Method 2: Using the "Screen Resolution" menu

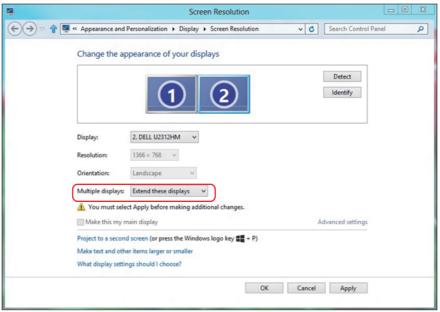

1. From the Start screen, select **Desktop** tile to switch to the Classic Windows desktop.

2. Right-click on the desktop and click Screen resolution.

- **3.** Click **Multiple displays** to choose a display selection. If you do not see the additional monitor listed, click Detect.
  - You may need to restart your system and repeat steps 1 to 3 if the system does not detect the added monitor.

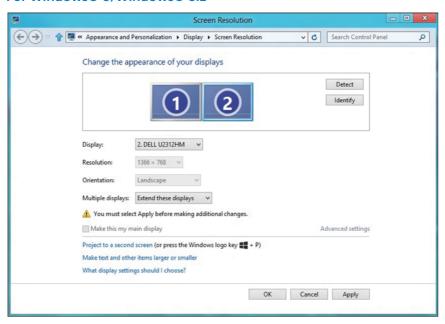

### **Setting Display Styles For Multiple Monitor**

After the external monitor(s) have been set up, users can select the desired display style from Multiple displays menu: Duplicate, Extend, Show Desktop On.

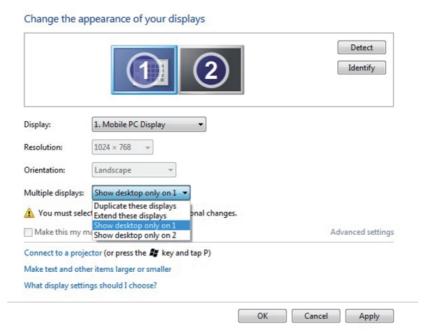

• Duplicate these displays: Duplicate the same screen on two monitors with the same resolution, chosen based on the monitor with a lower resolution.

### For Windows® 8/Windows® 8.1

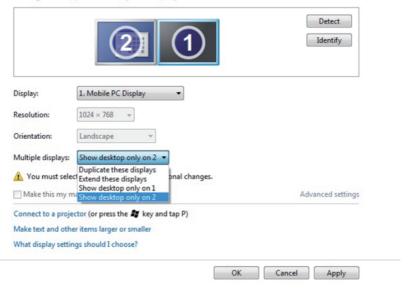

• Show desktop only on: Display the status of a particular monitor. This option is typically chosen when the laptop is used as a PC so the user can enjoy a large external monitor. Most current laptops support mainstream resolutions. As shown in the figure above, the resolution of the laptop monitor is only 1280 x 800, but after connecting a 27" external LCD monitor, users can immediately improve their visual enjoyment to 1920 x 1080 Full HD quality.

#### For Windows® 7

#### Change the appearance of your displays

### For Windows® 8/Windows® 8.1
