

TO ASSEMBLE HITCH

- Attach Tie Irons (Ref. No. 25) to the Stude on Side Plates of two Cutting Units, using Flat Washers and Coster Pins provided.
- Attach one Swivel Hitch Shaft (Ref. No. 29) to the front of each set of Tie Irons, using Pios (Ref. No. 27). The Flat Washers go to the outside of Tie Irons. Secure with Cotter Pins.
- 3. Attach Rear Draw Bar (Ref. No. 16) to a third Cutting Unit. Mount the Rear Draw Bar with the flat side down—over the Rear Tie Rod of mower. NOTE: The two center holes in the Draw Bar are offset to one side and the Bar should be placed with these holes toward front of mower. Attach with two "J" Bolts Ref. No. 21). The "J" Bolts should be on the front side of the Tie Bar. Attach with took Washer and Hex Nut.
- The two mowers with Tie Irons attached should now be assembled to Rear Draw Bar (Ref. No. 18). Attach a mower to each end of Rear Draw Bar.
- 5. The Front Draw Bar should now be assembled. Attach the three Front Yie Irons (Ref. Nos. 8, 9 and 10) to the Front Center Draw Bar (Ref. No. 1) using the Nuts and Lock Washers provided. Altoch Clevis Hitch (Ref. No. 11) to front of Tie Irons using Cap Screw and two Hax Nuts. NOTE: Tighten first Hax Nut just light enough that Clevis Hitch can still turn and tighten second Hox Nut light against first Nut.
- Attach Front Center Draw Bar Connecting Links (Ref. No. 4) to Studs on Side Plates of center mower, using Flat Washers and Cotter Pins.
- Remove the two remaining mowers from cartons and place one at each and of front center mower. Attach Front Draw Bar—R. H. Side (Ref. No. 2) and Front Draw Bar—L.H. Side (Ref. No. 3) to mowers. Attach Right and Left Draw Bars to Center Draw Bar with Pins (Ref. No. 7).

TO USE IN SMALL AREAS

This unit can be converted to a 3 Gang Mower. The two outside mowers are easily detached.

LUBRICATION

Each Mower is equipped with four Alemite Zerk fittings (one fitting on each Side Plate and one fitting on each wheel stud). Use regular Alemite grease or equal for these fittings and use a good grade of oil on Wood Roller and all moving perts of Hitch. Your Mowers should be kept thoroughly lubricated. The Drive Pintons are lubricated through the Reel Bearing fittings and it is not necessary to remove Drive Wheels to lubricate these Pinions.

ADJUSTMENT OF CUTTING UNIT

The revolving knives should touch the bottom knife lightly from end to end, The bottom knife can be brought closer to the revolving knives by the use of two cutter bar adjusting screws located at each end of cutter bar. First loosen very slightly the front jam nut and adjusting screw at each end, then loosen jam nut on rear screws and tighten the rear screws until the cutter bar touches the real. Be sure that all four scrows and jam nuts are tight after adjustment is made.

DO NOT ADJUST MOWER TOO TIGHTLY . . .

If the bottom knife and reel knives are rubbing too tightly together the reel knives will wear irregularly and cause excessive wear. If reel is too tight, loosen the two rear screws and lighten the two front screws until proper adjustment is obtained. If the reel has become badly nicked and requires grinding, send the mower to a competent repair man for proper attention.

CUTTING HEIGHTS

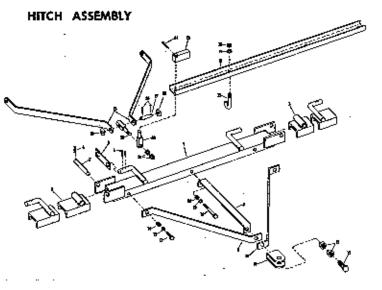

With wheels in "Low" position, the cutting heights are from 1" to 2-1/8". When wheels are in "High" position, the cutting heights are from 1-7/8" to 3". Adjustment of roller gives many heights in either position.

To change cutting heights, move wheels to other position. Turn mower on side, remove hex nut and lock washer on wheel stud. Pull wheel stud just out of sideplate (do not remove) and slide cover and wheel to other position and push wheel stud through sideplate hole. Replace lock washer and hex nut and tighten securely. If the pinion and pawl are removed from the shaft, be sure they are replaced properly. When the pinion and pawl are in proper position the wheel will roll backwards freely and turn the spiral cutter when moved forward. Keep nut on wheel stud tight.

TO ORDER REPAIR PARTS SUPPLY THE FOLLOWING:

- 1. Quantity wanted.
- The part number and name of part, (Not reference number).
- Model Number. (See Model Number at top of this page).
- 4. Your name and address. (Please Print). Parts ordered will be sent C.O.D. If you wish estimate of cost, send list of parts and we will send quotation.

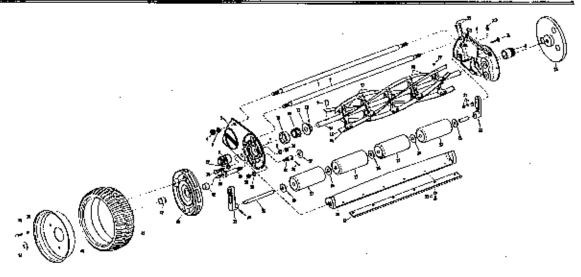

DO NOT RETURN GANG MOWERS TO THE FACTORY UNLESS YOU HAVE A LETTER AUTHORIZING YOU TO DO SO.
