# **Chapter 1: Introduction**

## **Introduction to your Router**

Welcome to the (802.11g) ADSL2+ Modem Router. The router is an “all-in-one” unit, combining an ADSL modem, ADSL router with four-port 10/100M auto-crossover Switch, and Firewall, enabling you to maximize the potential of your existing resources. The router can provide everything you need to get the machines on your network connected to the Internet over your ADSL broadband connection. It supports the latest ADSL2/2+ technology enabling high-speed data rates of up to 24Mbps. Its powerful QoS feature for traffic priority and bandwidth management. 802.11g ADSL2+ router with integrated 54Mbps 802.11g Access Point in this device; the router brings up the productivity and mobility to office users.

With features such as an ADSL Quick-Start wizard and DHCP Server, you can be online in no time at all and with a minimum of fuss and configuration, catering for first-time users to the guru requiring advanced features and control over their Internet connection and network.

## **Features**

The (802.11g) ADSL2+ Modem Router combines high-speed Internet access, networking, and advanced security for office local area network. It provides:

### **Express Internet Access**

The router complies with ADSL worldwide standards. It supports downstream rate up to 12/24 Mbps with ADSL2/2+, 8Mbps with ADSL. Users enjoy not only high-speed ADSL services but also broadband multimedia applications such as interactive gaming, video streaming and real-time audio much easier and faster than ever. It is compliant with Multi-Mode standard (ANSI T1.413, Issue 2; G.dmt (ITU G.992.1); G.lite (ITU G.992.2); G.hs (ITU G994.1); G.dmt.bis (ITU G.992.3); G.dmt.bisplus (ITU G.992.5)).

### **Wireless Ethernet 802.11g (Wireless router only)**

With integrated 802.11g Wireless Access Point in the router, the device offers a quick and easy access among wired network, wireless network and broadband connection (ADSL) with single device simplicity, and as a result, mobility to the users. In addition to 54 Mbps 802.11g data rate, it also interoperates backward with existing 802.11b equipment. The Wireless Protected Access (WPA) and Wireless Encryption Protocol (WEP) supported features enhance the security level of data protection and access control via Wireless LAN.

### **Fast Ethernet Switch**

A 4-port 10/100Mbps fast Ethernet switch is built in with automatic switching between MDI and MDI-X for 10Base-T and 100Base-TX ports. An Ethernet straight or crossover cable can be used directly for auto detection.

### **Multi-Protocol to Establish A Connection**

Supports PPPoA (RFC 2364 - PPP over ATM Adaptation Layer 5), RFC 1483 encapsulation over ATM (bridged or routed), PPP over Ethernet (RFC 2516) and IPoA (RFC1577) to establish a connection with the ISP. The product also supports VC-based and LLC-based multiplexing.

### **Quick Installation Wizard**

Supports a WEB GUI page to install this device quickly. With this wizard, end users can enter the information easily which they get from their ISP, then surf the Internet immediately.

● **Universal Plug and Play (UPnP) and UPnP NAT Traversal**

This protocol is used to enable simple and robust connectivity among stand-alone devices and PCs from many different vendors. It makes network simple and affordable for users. UPnP architecture leverages TCP/IP and the Web to enable seamless proximity networking in addition to control and data transfer among networked devices. With this feature enabled, users can now connect to Net meeting or MSN Messenger seamlessly.

● **Network Address Translation (NAT)**

Allows multi-users to access outside resources such as the Internet simultaneously with one IP address/one Internet access account. Many application layer gateway (ALG) are supported such as web browser, ICQ, FTP, Telnet, E-mail, News, Net2phone, Ping, NetMeeting, IP phone and others.

● **Firewall**

Supports SOHO firewall with NAT technology. Automatically detects and blocks Denial of Service (DoS) attacks. The URL blocking, packet filtering and SPI (Stateful Packet Inspection) are also supported. The hacker's attack will be recorded associated with timestamp in the security logging area. More firewall functions will always be implemented through updated firmware releases.

● **Domain Name System (DNS) relay**

Provides an easy way to map the domain name (a friendly name for users such as [www.yahoo.com](http://www.yahoo.com)) and IP address. When local machine sets its DNS server with this router's IP address, every DNS conversion request packet from the PC to this router will be forwarded to the real DNS in the outside network.

● **Dynamic Domain Name System (DDNS)**

The Dynamic DNS service allows you to alias a dynamic IP address to a static hostname. This dynamic IP address is the WAN IP address. For example, to use the service, you must first apply for an account from a DDNS service like <http://www.dyndns.org/>. More than 5 DDNS servers are supported.

● **PPP over Ethernet (PPPoE)**

Provides embedded PPPoE client function to establish a connection. Users can get greater access speed without changing the operation concept, sharing the same ISP account and paying for one access account. No PPPoE client software is required for local computer. The Automatic Reconnect and Disconnect Timeout (Idle Timer) functions are provided, too.

● **Virtual Server ("port forwarding")**

Users can specify some services to be visible from outside users. The router can detect incoming service requests and forward either a single port or a range of ports to the specific local computer to handle it. For example, a user can assign a PC in the LAN acting as a WEB server inside and expose it to the outside network. Outside users can browse inside web servers directly while it is protected by NAT. A DMZ host setting is also provided to a local computer exposed to the outside network, Internet.

● **Rich Packet Filtering**

Not only filters the packet based on IP address, but also based on Port numbers. It will filter packets from and to the Internet, and also provides a higher level of security control.

● **Dynamic Host Configuration Protocol (DHCP) client and server**

In the WAN site, the DHCP client can get an IP address from the Internet Service Provider (ISP) automatically. In the LAN site, the DHCP server can allocate a range of client IP addresses and distribute them including IP address, subnet mask as well as DNS IP address to local computers. It provides an easy way to manage the local IP network.

- **Static and RIP1/2 Routing**  
Supports an easy static routing table or RIP1/2 routing protocol to support routing capability.
- **Simple Network Management Protocol (SNMP)**  
It is an easy way to remotely manage the router via SNMP.
- **Web based GUI**  
Supports web based GUI for configuration and management. It is user-friendly and comes with on-line help. It also supports remote management capability for remote users to configure and manage this product.
- **Firmware Upgradeable**  
Device can be upgraded to the latest firmware through the WEB based GUI.
- **Rich management interfaces**  
Supports flexible management interfaces with local console port, LAN port, and WAN port. Users can use terminal applications through the console port to configure and manage the device, or Telnet, WEB GUI, and SNMP through LAN or WAN ports to configure and manage the device.

## **Chapter 2: Installing the Router**

### **Important note for using the (802.11g) ADSL2+ Router**

**Warning**

- ✓ Do not use this router in high humidity or high temperatures.
- ✓ Do not use the same power source for this router as other equipment.
- ✓ Do not open or repair the case yourself. If this router is too hot, turn off the power immediately and have it repaired at a qualified service center.
- ✓ Avoid using this product and all accessories outdoors.

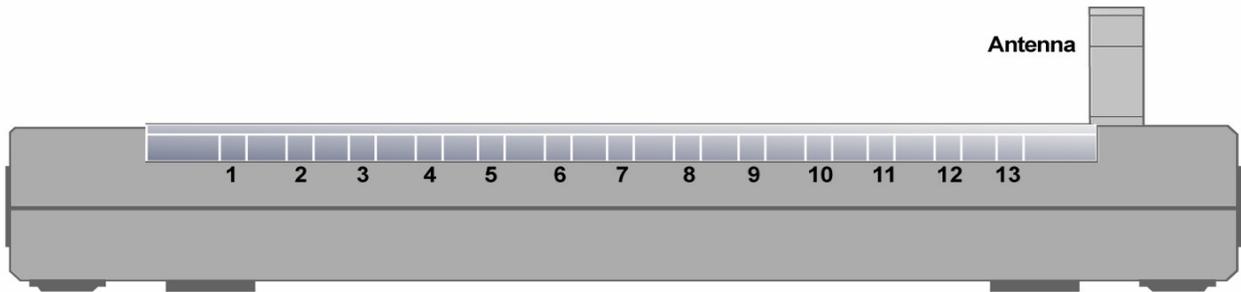

**Attention**

- ✓ Place this router on a stable surface.
- ✓ Only use the power adapter that comes with the package. Using a different voltage rating power adaptor may damage this router.

### **Package Contents**

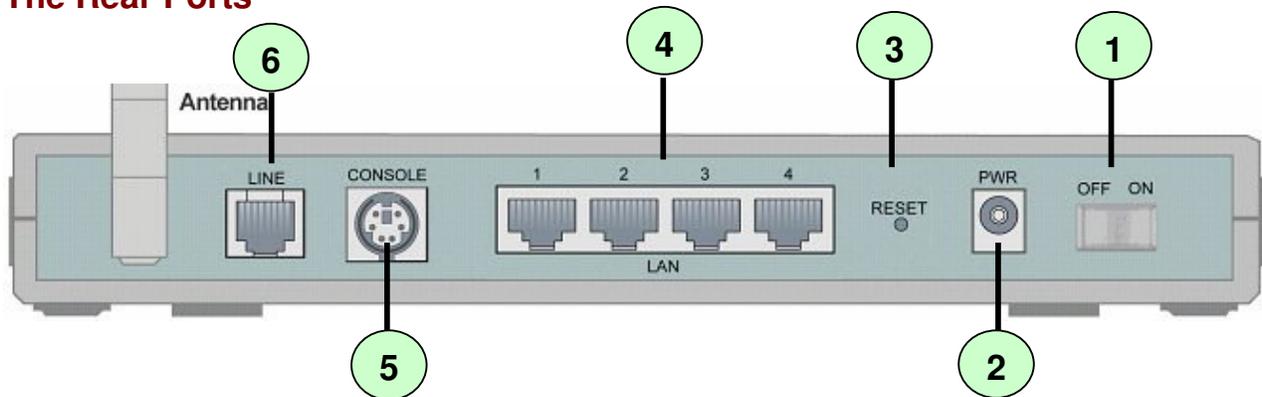

- H9300G (802.11g) ADSL2+ Modem Router
- CD-ROM containing the online manual
- RJ-11 ADSL/telephone Cable
- Ethernet (CAT-5 LAN) Cable
- Console (PS2-RS232) Cable (optional)
- AC-DC power adapter (12V DC, 1A)
- External Antenna
- Quick Start Guide

## The Front LEDs

LED		Description
13	<b>INTERNET</b>	Lit steady when there is a PPPoA / PPPoE connection. Lit and flashed periodically when there is email in the Inbox.
12	<b>ADSL</b>	When lit, it indicates that the ADSL (Line) port is connected to the DSLAM and working properly.
8-11	<b>ETHERNET Port</b> 1X — 4X <b>(RJ-45 connector)</b>	Lit when the LAN link is connected to an Ethernet device. Green for 100Mbps; Orange for 10Mbps. Blinking when data is Transmitted / Received.
7	<b>WLAN</b>	Lit green when the wireless connection is established. Flashes when sending/receiving data.
6	<b>SYS</b>	Lit when the system is ready.
5	<b>PWR</b>	Lit when power is ON.

## The Rear Ports

Port		Meaning
1	<b>Power Switch</b>	Power ON/OFF switch
2	<b>PWR</b>	Connect the supplied power adapter to this jack.
3	<b>RESET</b>	After the device is powered on, press it to reset the device or restore to factory default settings. <b>0-3 seconds:</b> reset the device <b>6 seconds above:</b> restore to factory default settings (this is used when you cannot login to the router. <b>E.g.: forgot the password</b> )
4	<b>LAN</b> 1X — 4X (RJ-45 connector)	Connect a UTP Ethernet cable (Cat-5 or Cat-5e) to one of the four LAN ports when connecting to a PC or an office/home network of 10Mbps or 100Mbps.
5	<b>CONSOLE</b>	Connect a PS2/RS-232 cable (optional) to this port when connecting to a PC's RS-232 port (9-pin serial port).
6	<b>LINE</b>	Connect the supplied RJ-11 ("telephone") cable to this port when connecting to the ADSL/telephone network.

## Cabling

The most common problem associated with Ethernet is bad cabling or ADSL line(s). Make sure that all connected devices are turned on. On the front of the product is a bank of LEDs. Verify that the LAN Link and ADSL line LEDs are lit. If they are not, verify that you are using the proper cables.

Ensure that all other devices connected to the same telephone line as your router (e.g. telephones, fax machines, analogue modems) have a line filter connected between them and the wall socket (unless you are using a Central Splitter or Central Filter installed by a qualified and licensed electrician), and ensure that all line filters are correctly installed and the right way around.

Missing line filters or line filters installed the wrong way around can cause problems with your ADSL connection, including causing frequent disconnections.

## **Chapter 3: Basic Installation**

(802.11g) ADSL2+ Modem router can be configured with your web browser. The web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me, etc. The product provides a very easy and user-friendly interface for configuration.

PCs must have an Ethernet interface installed properly and be connected to the router either directly or through an external repeater hub, and have TCP/IP installed and configured to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. The default IP address of the router is **192.168.1.254** and the subnet mask is **255.255.255.0** (i.e. any attached PC must be in the same subnet, and have an IP address in the range of 192.168.1.1 to 192.168.1.253). The best and easiest way is to configure the PC to get an IP address automatically from this router using DHCP. If you encounter any problems accessing the router's web interface it may also be advisable to **uninstall** any kind of software firewall on your PCs, as they can cause problems accessing the 192.168.1.254 IP address of the router. Users should make their own decisions on how to best protect their network.

Please follow the steps below for your PC's network environment installation. Before taking the first step, please check your PC's network components. The TCP/IP protocol stack and Ethernet network adapter must be installed. If not, please refer to your Windows-related or other operating system manuals.

Any TCP/IP capable workstation can be used to communicate with or through the router. To configure other types of workstations, please consult the manufacturer's documentation.

### **Connecting your router**

1. Connect the router to a LAN (Local Area Network) and the ADSL/telephone network.
2. Power on the device.
3. Make sure the **PWR** and **SYS** LEDs are lit steadily and that the **relevant ETHERNET** LED is lit.

The WLAN LED will be lit steadily.

## Configuring PC in Windows XP

1. Go to **Start / Control Panel (in Classic View)**. In the Control Panel, double-click on **Network Connections**.
2. Double-click **Local Area Connection**. (See Figure 3.1)

Figure 3.1: LAN Area Connection

3. In the **Local Area Connection Status** window, click **Properties**. (See Figure 3.2)

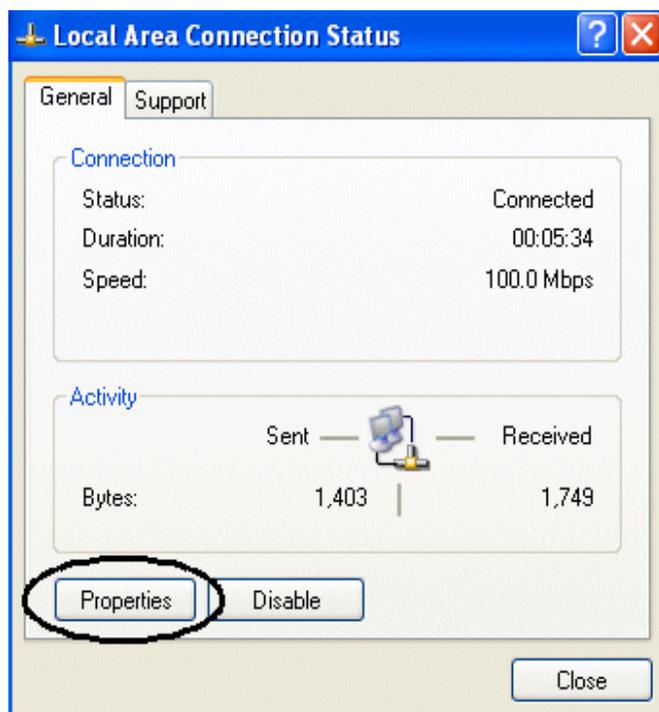

Figure 3.2: LAN Connection Status

4. Select **Internet Protocol (TCP/IP)** and click **Properties**.  
(See Figure 3.3)

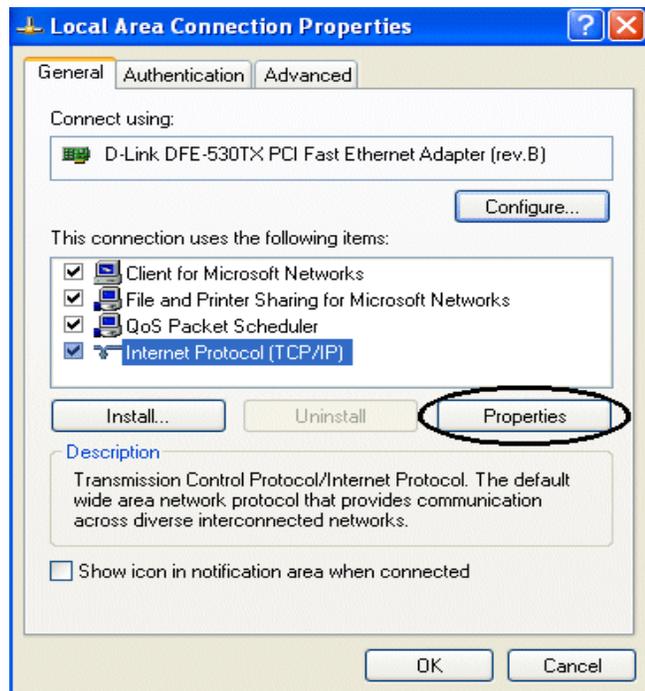

Figure 3.3: TCP / IP

5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.  
(See Figure 3.4)
6. Click **OK** to finish the configuration.

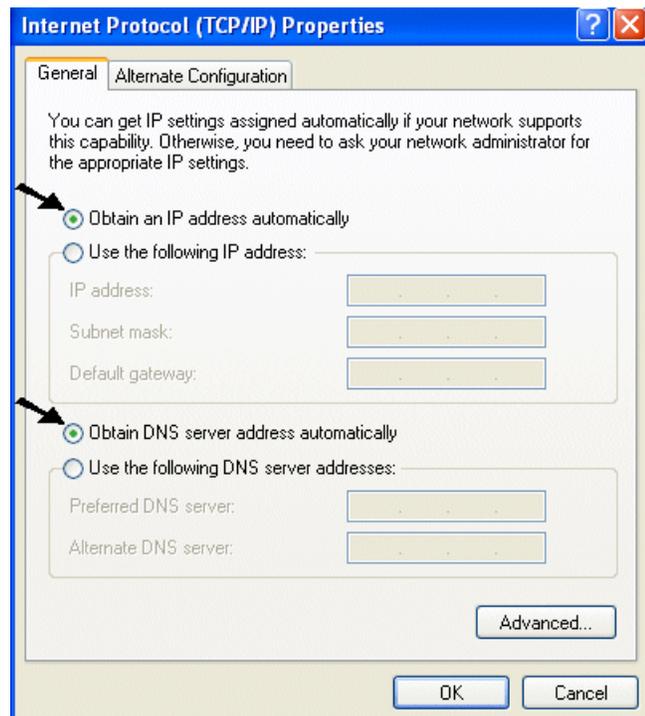

Figure 3.4: IP Address &amp; DNS Configuration

## Configuring PC in Windows 2000

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network and Dial-up Connections**.
2. Double-click **Local Area Connection**. (See Figure 3.5)

Figure 3.5: LAN Area Connection

3. In the **Local Area Connection Status** window, click **Properties**. (See Figure 3.6)

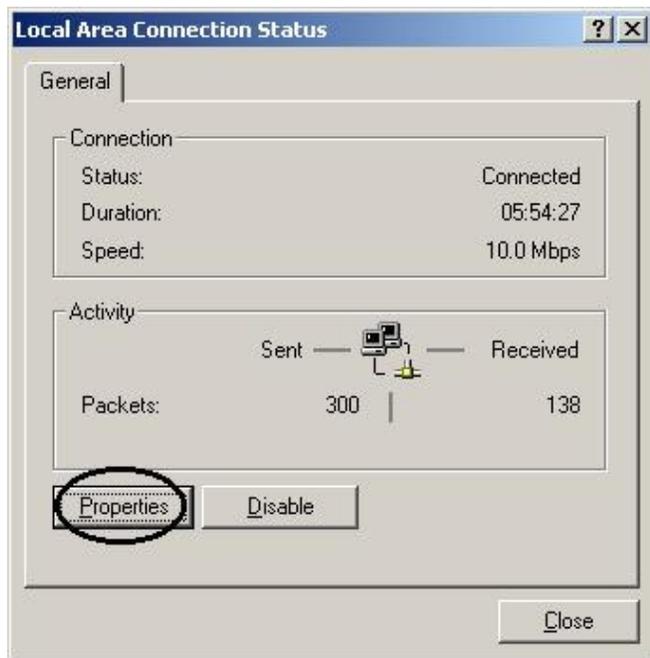

Figure 3.6: LAN Connection Status

4. Select **Internet Protocol (TCP/IP)** and click **Properties**.  
(See Figure 3.7)

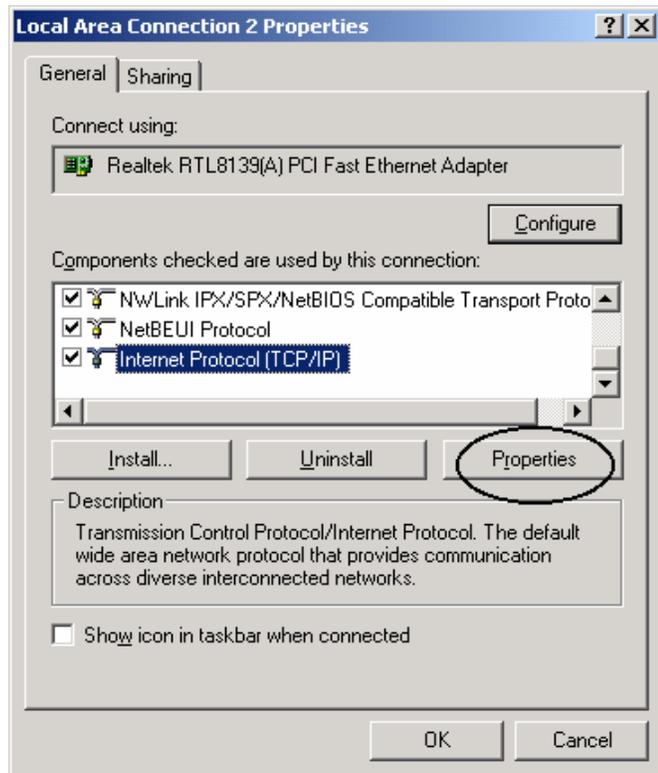

Figure 3.7: TCP / IP

5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.  
(See Figure 3.8)
6. Click **OK** to finish the configuration.

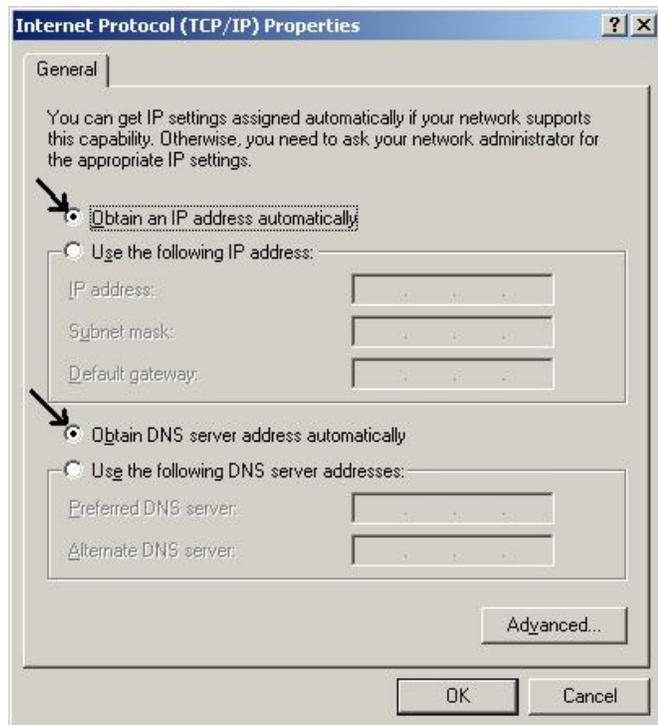

Figure 3.8: IP Address &amp; DNS Configuration

## Configuring PC in Windows 95/98/ME

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network** and choose the **Configuration** tab.
2. Select **TCP / IP -> NE2000 Compatible**, or the name of your Network Interface Card (NIC) in your PC.  
(See Figure 3.9)
3. Click **Properties**.

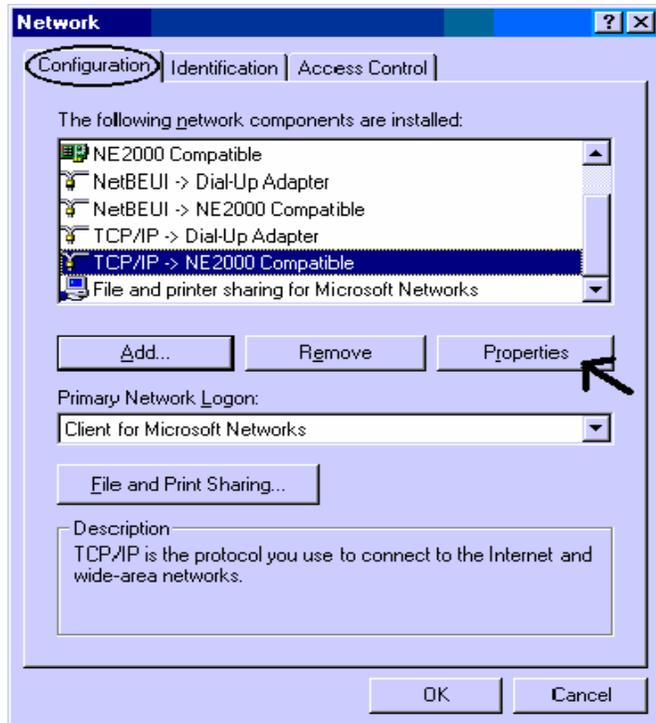

Figure 3.9: TCP / IP

4. Select the **IP Address** tab. In this page, click the **Obtain an IP address automatically** radio button.  
(See Figure 3.10)

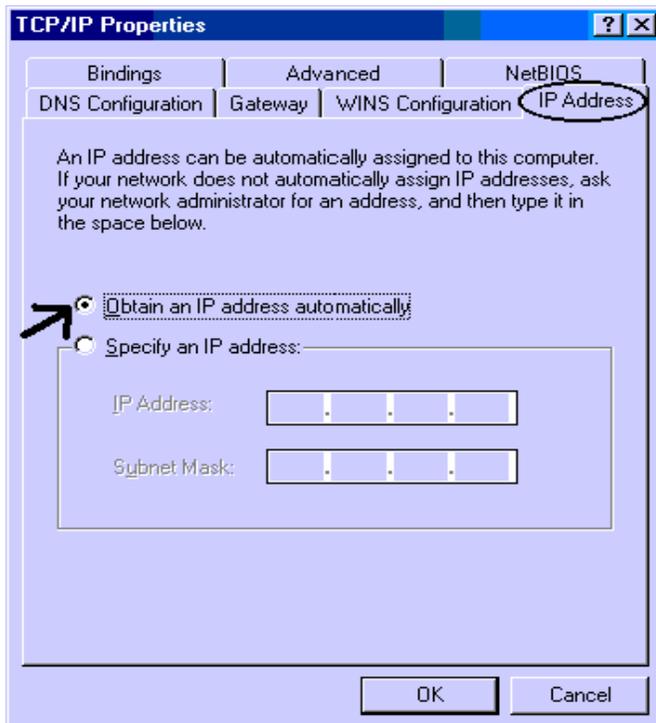

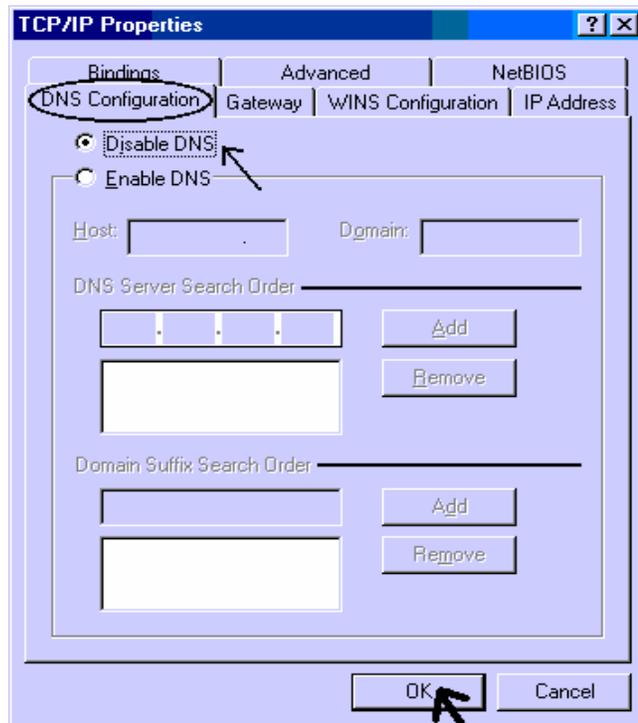

Figure 3.10: IP Address

5. Then select the **DNS Configuration** tab. (See **Figure 3.11**)
6. Select the **Disable DNS** radio button and click **OK** to finish the configuration.

**Figure 3.11: DNS Configuration**

## Configuring PC in Windows NT4.0

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network** and choose the **Protocols** tab.
2. Select **TCP/IP Protocol** and click **Properties**. (See Figure 3.12)

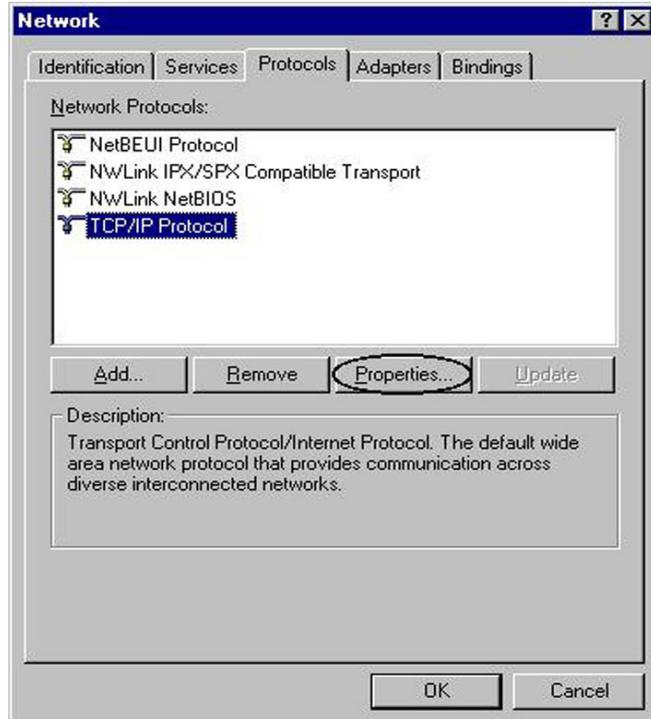

Figure 3.12: TCP / IP

3. Select the **Obtain an IP address from a DHCP server** radio button and click **OK**.

(See Figure 3.13)

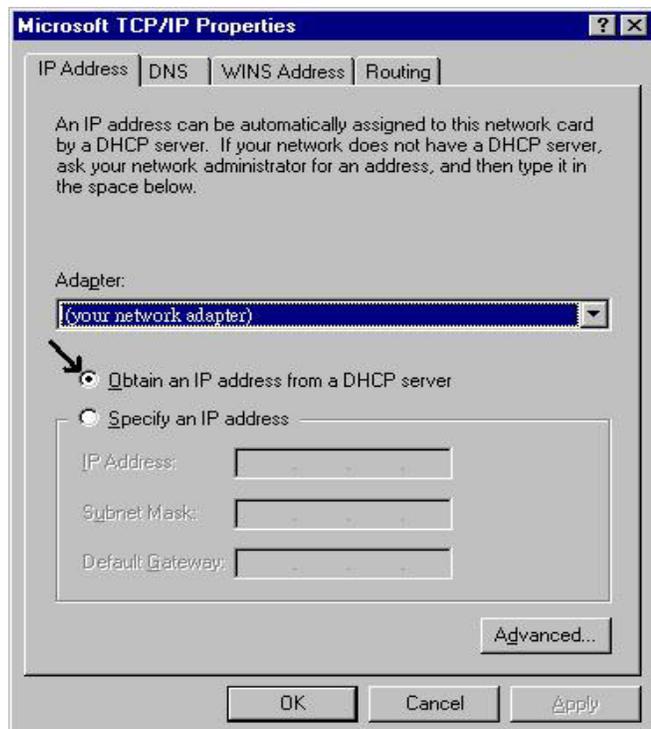

Figure 3.13: IP Address

## Factory Default Settings

Before configuring your, you need to know the following default settings.

### Web Interface (Username and Password)

- ▶ Username: admin
- ▶ Password: admin

The default username and password are “**admin**” and “**admin**” respectively.

#### Attention

If you ever forget the password to log in, you may press the RESET button up to 6 seconds to restore the factory default settings.

### LAN Device IP Settings

- ▶ IP Address: 192.168.1.254
- ▶ Subnet Mask: 255.255.255.0

### ISP setting in WAN site

- ▶ PPPoE

### DHCP server

- ▶ DHCP server is enabled.
- ▶ Start IP Address: 192.168.1.100
- ▶ IP pool counts: 100

### LAN and WAN Port Addresses

The parameters of LAN and WAN ports are pre-set in the factory. The default values are shown below.

LAN Port		WAN Port
IP address	192.168.1.254	The PPPoE function is <i>enabled</i> to automatically get the WAN port configuration from the ISP, but you have to set the username and password first.
Subnet Mask	255.255.255.0	
DHCP server function	Enabled	
IP addresses for distribution to PCs	100 IP addresses continuing from 192.168.1.100 through 192.168.1.199	

## Information from your ISP

Before configuring this device, you have to check with your ISP (Internet Service Provider) what kind of service is provided such as PPPoE, PPPoA, RFC1483, or IPoA.

Gather the information as illustrated in the following table and keep it for reference.

<b>PPPoE</b>	VPI/VCI, VC-based/LLC-based multiplexing, Username, Password, Service Name, and Domain Name System (DNS) IP address (it can be automatically assigned by your ISP when you connect or be set manually).
<b>PPPoA</b>	VPI/VCI, VC-based/LLC-based multiplexing, Username, Password, and Domain Name System (DNS) IP address (it can be automatically assigned by your ISP when you connect or be set manually).
<b>RFC1483 Bridged</b>	VPI/VCI, VC-based/LLC-based multiplexing to use Bridged Mode.
<b>RFC1483 Routed</b>	VPI/VCI, VC-based/LLC-based multiplexing, IP address, Subnet mask, Gateway address, and Domain Name System (DNS) IP address (it is fixed IP address).
<b>IPoA</b>	VPI/VCI, VC-based/LLC-based multiplexing, IP address, Subnet mask, Gateway address, and Domain Name System (DNS) IP address (it is fixed IP address).

## Configuring with your Web Browser

Open your web browser, enter the IP address of your router, which by default is **192.168.1.254**, and click **Go**, a user name and password window prompt will appear. **The default username and password are “admin” and “admin”.** (See Figure 3.14)

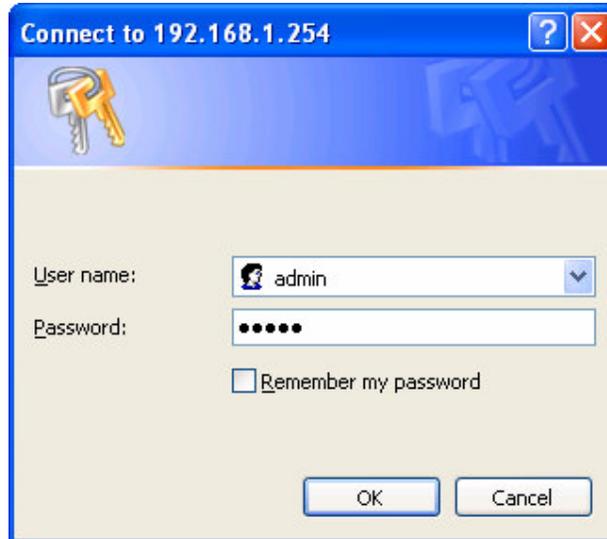

Figure 3.14: User name & Password Prompt Window

**Congratulation! You are now successfully logon to the (802.11g) ADSL2+ Modem Router!**

## **Chapter 4: Configuration**

At the configuration homepage, the left navigation pane where bookmarks are provided links you directly to the desired setup page, including:

- **Status** (ARP Table, Wireless Association Table (Wireless router only), Routing Table, DHCP Table, Email Status, Event Log, Error Log, NAT Sessions and UPnP Portmap)
- **Quick Start**
- **Configuration**  
(LAN, WAN, System, Firewall, QoS, Virtual Server, Time Schedule and Advanced)
- **Save Config to FLASH**
- **Language** (provides user interface in English and Deutsch languages)

Please see the relevant sections of this manual for detailed instructions on how to configure (802.11g) ADSL2+ Modem Router.

## Status

### ARP Table

This section displays the router's ARP (Address Resolution Protocol) Table, which shows the mapping of Internet (IP) addresses to Ethernet (MAC) addresses. This is useful as a quick way of determining the MAC address of the network interface of your PCs to use with the router's **Firewall – MAC Address Filter** function. See the Firewall section of this manual for more information on this feature.

ARP Table			
IP <> MAC List			
IP Address	MAC Address	Interface	Static
192.168.1.187	00:0c:6e:bd:11:6d	iplan	no

**IP Address:** A list of IP addresses of devices on your LAN (Local Area Network).

**MAC Address:** The MAC (Media Access Control) addresses for each device on your LAN.

**Interface:** The interface name (on the router) that this IP Address connects to.

**Static:** Static status of the ARP table entry:

- ⊙ “no” for dynamically-generated ARP table entries
- ⊙ “yes” for static ARP table entries added by the user

## Wireless Association Table

Wireless Association Table	
Wireless client's MAC address and the corresponding IP address	
IP Address	MAC
192.168.1.100	00:04:23:73:9a:86

**IP Address:** It is IP address of wireless client that joins this network.

**MAC:** The MAC address of wireless client.

## Routing Table

Routing Table				
Routing Table				
Valid	Destination	Netmask	Gateway/Interface	Cost
RIP Routing Table				
Destination	Netmask	Gateway	Cost	

### Routing Table

**Valid:** It indicates a successful routing status.

**Destination:** The IP address of the destination network.

**Netmask:** The destination netmask address.

**Gateway/Interface:** The IP address of the gateway or existing interface that this route will use.

**Cost:** The number of hops counted as the cost of the route.

### RIP Routing Table

**Destination:** The IP address of the destination network.

**Netmask:** The destination netmask address.

**Gateway:** The IP address of the gateway that this route will use.

**Cost:** The number of hops counted as the cost of the route.

## DHCP Table

DHCP Table		
Type		
Leased ▶	Expired ▶	Permanent ▶

**Leased:** The DHCP assigned IP addresses information.

**IP Address:** A list of IP addresses of devices on your LAN (Local Area Network).

**Expired:** The expired IP addresses information.

**Permanent:** The fixed host mapping information

### Leased Table

Leased Table			
IP Address	MAC Address	Client Host Name	Expiry

**IP Address:** The IP address that assigned to client.

**MAC Address:** The MAC address of client.

**Client Host Name:** The Host Name (Computer Name) of client.

**Expiry:** The current lease time of client.

### Expired Table

Expired Table			
IP Address	MAC Address	Client Host Name	Expiry

Please refer the **Leased Table**.

### Permanent Table

Permanent Table			
Name	IP Address	MAC Address	Maximum Lease Time

**Name:** The name you assigned to the Permanent configuration.

**IP Address:** The fixed IP address for the specify client.

**MAC Address:** The MAC Address that you want to assign the fixed IP address

**Maximum Lease Time:** The maximum lease time interval you allow to clients

## Email Status

Details and status for the Email Account you have configured the router to check. Please see the **Advanced** section of this manual for details on this function.

Email Status	
Email Account	
Account Name	username
POP3 Mail Server	pop3.mail.com
Email Status	No mail
<input type="button" value="Reset Status"/> <input type="button" value="Check Now"/>	

## Event Log

This page displays the router's Event Log entries. Major events are logged to this window, such as when the router's ADSL connection is disconnected, as well as Firewall events when you have enabled Intrusion or Blocking Logging in the **Configuration – Firewall** section of the interface. Please see the **Firewall** section of this manual for more details on how to enable Firewall logging.

Event Log
<pre> ----- system log buffer head ----- ----- system log buffer tail ----- </pre>
<input type="button" value="Refresh"/> <input type="button" value="Clear"/>

## Error Log

Any errors encountered by the router (e.g. invalid names given to entries) are logged to this window.

Error Log		
Error Log ( <i>times are in seconds since last reboot</i> )		
When	Process	Error Log

## NAT Sessions

This section lists all current NAT sessions between interface of types external (WAN) and internal (LAN).

### NAT Sessions

Active NAT sessions between interface of types external and internal:

Prot	Local IP: Port local/public	Remote IP: Port	Idle (sec.)
TCP	192.168. 1.201: 1110/ 1110	64. 94.110. 12: 80	29
TCP	192.168. 1. 99: 1982/ 1982	210.184.108.126: 80	729
TCP	192.168. 1. 99: 1979/ 1979	207. 68.178.239: 80	542
TCP	192.168. 1.202: 2011/ 2011	207. 46.107. 27: 1863	21
TCP	192.168. 1.100: 1166/ 1166	207. 46.106. 90: 1863	18
TCP	192.168. 1. 99: 1969/ 1969	207. 46.107. 22: 1863	673
ICMP	192.168. 1.201: 512/ 512	168. 95. 4.211: 512	0

TCP :	6 sessions
UDP :	0 sessions
Others :	1 sessions
Total :	7 sessions

## UPnP Portmap

The section lists all port-mapping established using UPnP (Universal Plug and Play). Please see the **Advanced** section of this manual for more details on UPnP and the router's UPnP configuration options.

UPnP Portmap				
UPnP Portmap Table				
Name	Protocol	External Port	Redirect Port	IP Address
emwebigd1024	udp	35324 ~ 35324	15852 ~ 15852	192.168.1.205
emwebigd1025	tcp	48888 ~ 48888	14811 ~ 14811	192.168.1.205
emwebigd1063	udp	9210 ~ 9210	15169 ~ 15169	192.168.1.202
emwebigd1064	tcp	50937 ~ 50937	14500 ~ 14500	192.168.1.202

## Quick Start

Quick Start	
<b>Connection</b>	
Encapsulation	PPPoE <input type="button" value="Auto Scan"/>
VPI	0
VCI	33
NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
<b>Optional Settings</b>	
IP Address	0.0.0.0 ( <i>'0.0.0.0'</i> means <i>'Obtain an IP address automatically'</i> )
SubNetmask	0.0.0.0
Default Gateway	0.0.0.0
<b>DNS</b>	
Obtain DNS automatically	<input type="checkbox"/> Enable
Primary DNS	<input type="text"/>
Secondary DNS	<input type="text"/>
<b>PPP</b>	
Username	<input type="text"/>
Password	<input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

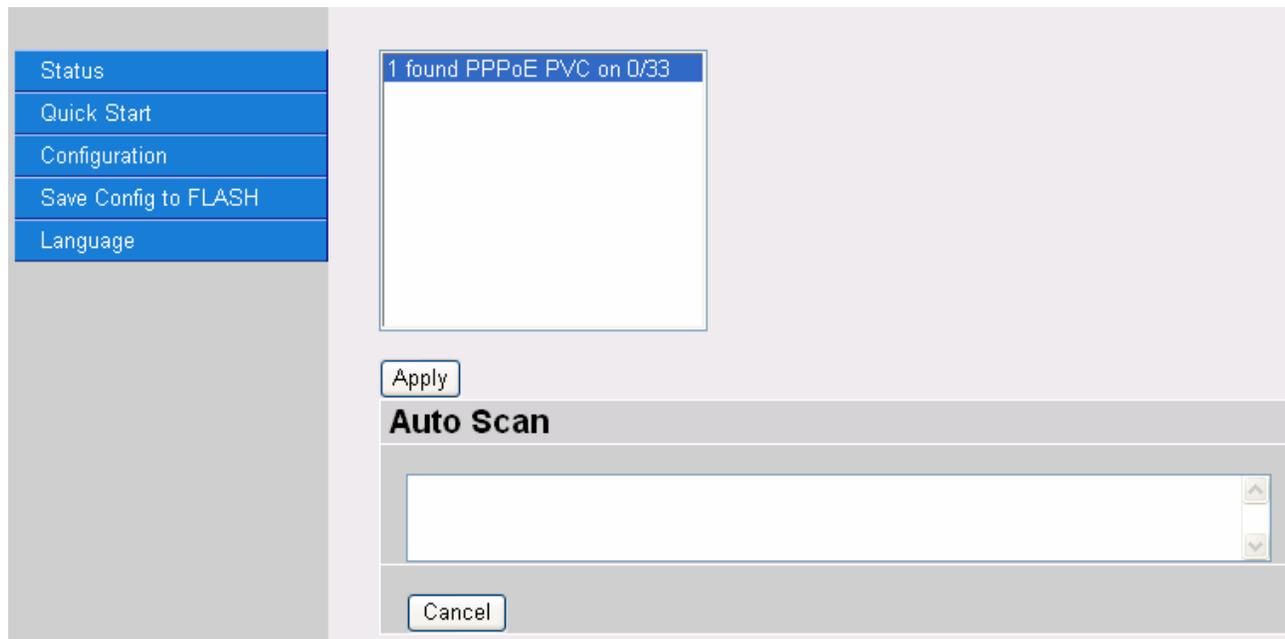

For detailed instructions on configuring your WAN settings, please see the **WAN** section of this manual.

Usually, the only details you will need for the Quick Start wizard to get you online are your login (often in the form of *username@ispname*), your password and the encapsulation type. In addition, you have the option to provide specific DNS as your desire, or check the **Enable** box to get the DNS automatically from your ISP.

Your ISP will be able to supply all the details you need, alternatively, if you have deleted the current WAN Connection in the **WAN – ISP** section of the interface, you can use the router's PVC Scan feature to attempt to determine the Encapsulation types offered by your ISP.

Auto Scan	
<b>Before you scan the PVCs, please DELETE all the WAN interfaces.</b>	
IP Address	<input type="text"/> if provided by ISP
Gateway	<input type="text"/> if provided by ISP
<input type="button" value="Start"/>	

Click **Start** to begin scanning for encapsulation types offered by your ISP. If the scan is successful you will then be presented with a list of supported options:

Select the desired option from the list and click **Apply** to return to the Quick Start interface to continue configuring your ISP connection. Please note that the contents of this list will vary, depending on what is supported by your ISP.

## Configuration

When you click this item, you get following sub-items to configure the ADSL router.

**LAN, WAN, System, Firewall, QoS, Virtual Server, Time Schedule and Advanced**

These functions are described below in the following sections.

### LAN (Local Area Network)

There are seven items within the LAN section: [Bridge Interface](#), [Ethernet](#), [Ethernet Client Filter](#), [Wireless](#), [Wireless Security](#), [Wireless Client Filter](#), [Port Setting](#) and [DHCP Server](#).

#### Bridge Interface

Bridge Interface	
<b>Parameters</b>	
Bridge Interface	VLAN Port
Ethernet	<input checked="" type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4
Ethernet1	<input type="checkbox"/> P1 <input checked="" type="checkbox"/> P2 <input checked="" type="checkbox"/> P3 <input checked="" type="checkbox"/> P4
Ethernet2	<input type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4
Ethernet3	<input type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4
<b>Device Management</b>	
Management Interface	Ethernet
<input type="button" value="Apply"/>	

You can setup member ports for each VLAN group under Bridge Interface section. From the example, two VLAN groups need to be created.

Ethernet: P1 (Port 1)

Ethernet1: P2, P3 and P4 (Port 2, 3, 4) Please uncheck P2, P3, P4 from Ethernet VLAN port first.

**Note: You should setup each VLAN group with caution. Each Bridge Interface is arranged in this order.**

Bridge Interface	VLAN Port (Always starts with)
Ethernet	P1 / P2 / P3 / P4
Ethernet1	P2 / P3 / P4
Ethernet2	P3 / P4
Ethernet3	P4

Management Interface: To specify which VLAN group has possibility to do device management, like doing web management.

Note: NAT/NAPT can be applied to management interface only.

## Ethernet

Ethernet				
Primary IP Address				
IP Address	192	168	1	254
SubNetmask	255	255	255	0
RIP	<input type="checkbox"/> RIP v1 <input type="checkbox"/> RIP v2 <input type="checkbox"/> RIP v2 Multicast			
Secondary IP Address				
The Secondary IP Address should be on the same subnet as the Primary IP Address and uses the same Subnet Mask.				
IP Address	0	0	0	0
<input type="button" value="Apply"/>				

The router supports two Ethernet IP addresses in the LAN, and two different LAN subnets through which you can access the Internet at the same time. Users usually only have one subnet in their LAN, so there is no need to configure a Secondary IP address. The default IP address for the router is 192.168.1.254.

**RIP:** RIP v1, RIP v2, and RIP v2 Multicast. Check to enable RIP function.

## Ethernet Client Filter

The Ethernet Client Filter supports up to 16 Ethernet network machines that helps you to manage your network control to accept traffic from specific authorized machines or can restrict unwanted machine(s) to access your LAN.

There are no pre-define Ethernet MAC address filter rules; you can add the filter rules to meet your requirements.

**Ethernet Client Filter**

**Filtering Rules**

Ethernet Client Filter  Disable  Allowed  Blocked

MAC Address List [Candidates](#) ▶  
(MAC Address Format is 'xx:xx:xx:xx:xx:xx')

[Apply](#)

**Ethernet Client Filter:** Default setting is set to **Disable**.

**Allowed:** check to authorize specific device accessing your LAN by insert the MAC Address in the space provided or click [Candidates](#) ▶. Make sure your PC's MAC is listed.

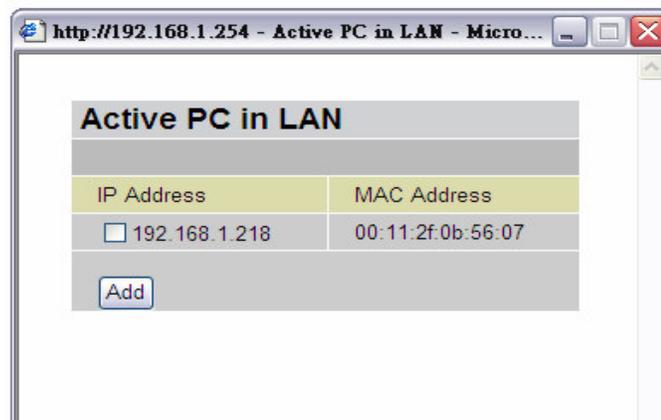

**Blocked:** check to prevent unwanted device accessing your LAN by insert the MAC Address in the space provided or click [Candidates](#) ▶. Make sure your PC's MAC is not listed.

The maximum client is 16. The MAC addresses are 6 bytes long; they are presented only in hexadecimal characters. The number **0 - 9** and letters **a - f** are acceptable.

(Note: Follow the MAC Address Format **xx:xx:xx:xx:xx:xx**. Semicolon ( : ) must be included)

**Candidates:** automatically detects devices connected to the router through the Ethernet. .

[Candidates](#) ▶ → **Active PC in LAN**

Active PC in LAN displays a list of individual Ethernet device's IP Address & MAC Address which connecting to the router.

You can easily by checking the box next to the IP address to be blocked or allowed. Then, **Add** to insert to the Ethernet Client Filter table. The maximum Ethernet client is 16.

## Wireless

Wireless	
Parameters	
WLAN Service	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Mode	802.11b + g
ESSID	wlan-ap
ESSID Broadcast	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Regulation Domain	N.America
Channel ID	Channel 1 (2.412 GHz)
Connected	true
AP MAC address	00:04:ed:1e:14:b1
AP Firmware Version	1.38.1.7.06.2004
Wireless Distribution System (WDS)	
WDS Service	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Peer WDS MAC address	00:00:00:00:00:00
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Parameters

**WLAN Service:** Default setting is set to **Enable**. If you do not have any wireless, both 802.11g and 802.11b, device in your network, select **Disable**.

**Mode:** The default setting is **802.11b+g** (Mixed mode). If you do not know or have both 11g and 11b devices in your network, then keep the default in **mixed mode**. From the drop-down manual, you can select **802.11g** if you have only 11g card. If you have only 11b card, then select **802.11b**.

**ESSID:** The ESSID is the unique name of a wireless access point (AP) to be distinguished from another. For security propose, change the default **H9300G** to a unique ID name to the AP which is already built-in to the router's wireless interface. It is case sensitive and must not exceed 32 characters. Make sure your wireless clients have exactly the ESSID as the device, in order to get connected to your network. **(Note: It is case sensitive and must not exceed 32 characters.)**

**ESSID Broadcast:** It is function in which transmits its ESSID to the air so that when wireless client searches for a network, router can then be discovered and recognized. Default setting is **Enable**.

**Disable:** If you do not want broadcast your ESSID. Any client uses "any" wireless setting cannot discover the Access Point (AP) of your router.

**Enable:** Any client that using the "any" setting can discover the Access Point (AP) in

**Regulation Domain:** There are seven Regulation Domains for you to choose from, including **North America (N.America)**, **Europe**, **France**, etc. The Channel ID will be different based on this setting.

**Channel ID:** Select the ID channel that you would like to use.

**Connected:** Representing in **true** or **false**. That it is the connection status between the system and the build-in wireless card.

**AP MAC Address:** It is a unique hardware address of the Access Point.

**AP Firmware Version:** The Access Point firmware version.

### Wireless Distribution System (WDS)

It is a wireless access point mode that enables wireless link and communication with other access point. It is easy to be installed simply define peer's MAC address of the connected AP. WDS takes advantages of cost saving and flexibility which no extra wireless client device is required to bridge between two access points and extending an existing wired or wireless infrastructure network to create a larger network.

In addition, WDS enhances its link connection security in WEP mode, WEP key encryption must be the same for both access points.

**WDS Service:** The default setting is **Disable**. Check **Enable** radio button to activate this function.

**Peer WDS MAC Address:** It is the associated AP's MAC Address. It is important that your peer's AP must include your MAC address in order to acknowledge and communicate with each other.

**(Note: For MAC Address, Semicolon ( : ) must be included)**

## Wireless Security

You can disable or enable with WPA or WEP for protecting wireless network. The default mode of wireless security is **disabled**.

Wireless Security	
Parameters	
Security Mode	Disable <input type="button" value="v"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

### WPA Pre-Shared Key

Wireless Security	
Parameters	
Security Mode	WPA Pre-Shared Key <input type="button" value="v"/>
WPA Algorithms	TKIP
WPA Shared Key	<input type="text"/>
Group Key Renewal	600 <input type="text"/> seconds
Idle Timeout	3600 <input type="text"/> seconds (120~65535)
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

**WPA Algorithms:** TKIP (Temporal Key Integrity Protocol) utilizes a stronger encryption method and incorporates Message Integrity Code (MIC) to provide protection against hackers.

**WPA Shared Key:** The key for network authentication. The input format is in character style and key size should be in the range between 8 and 63 characters.

**Group Key Renewal:** The period of renewal time for changing the security key automatically between wireless client and Access Point (AP). Default value is **600** seconds.

**Idle Timeout:** The default idle timeout is **3600** seconds. A Timeout value base on the case of no data traffic is send or received. If Router detects no traffic in the wireless, it will start timing the clock and drop the session as it reaches to the defined timeout value. New session will be re-established after the old session.

WEP

Wireless Security	
Parameters	
Security Mode	<input type="text" value="WEP"/>
WEP Encryption	<input type="radio"/> WEP64 <input checked="" type="radio"/> WEP128 <input type="text" value="Hex"/>
Passphrase	<input type="text"/> <input type="button" value="Generate"/>
Default Used WEP Key	<input type="text" value="0"/> (0~3)
Key 0	<input type="text" value="00-00-00-00-00-00-00-00-00-00-00-00-01"/>
Key 1	<input type="text" value="00-00-00-00-00-00-00-00-00-00-00-00-00"/>
Key 2	<input type="text" value="00-00-00-00-00-00-00-00-00-00-00-00-00"/>
Key 3	<input type="text" value="00-00-00-00-00-00-00-00-00-00-00-00-00"/>
* : WDS uses Key0 for WEP encryption.	
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

**WEP Encryption:** To prevent unauthorized wireless stations from accessing data transmitted over the network, the router offers highly secure data encryption, known as WEP. If you require high security for transmissions, there are two alternatives to select from: **WEP 64** and **WEP 128**. WEP 128 will offer increased security over WEP 64.

**Passphrase:** This is used to generate WEP keys automatically based upon the input string and a pre-defined algorithm in WEP64 or WEP128. You can input the same string in both the AP and Client card settings to generate the same WEP keys. Please note that you do not have to enter **Key (0-3)** as below when the **Passphrase** is enabled.

**Default Used WEP Key:** Select the encryption key ID; please refer to **Key (0-3)** below.

**Key (0-3):** Enter the key to encrypt wireless data. To allow encrypted data transmission, the WEP Encryption Key values on all wireless stations must be the same as the router. There are four keys for your selection. The input format is in HEX style, 5 and 13 HEX codes are required for WEP64 and WEP128 respectively, the separator is "-". For example, using WEP64, 11-22-33-44-55 is a valid key, whilst 1122334455 is invalid.

## Wireless Client (MAC Address) Filter

The MAC Address supports up to 16 wireless network machines and helps you to manage your network control to accept traffic from specific authorized machines or to restrict unwanted machine(s) to access your LAN.

There are no pre-define MAC Address filter rules; you can add the filter rules to meet your requirements.

### Wireless Client ( MAC Address ) Filter

**Filtering Rules**

Filter Action	<input checked="" type="radio"/> Disable	<input type="radio"/> Allowed	<input type="radio"/> Blocked
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	<input type="text"/>	<input type="text"/>	<input type="text"/>

**Ethernet Client Filter:** Default setting is set to **Disable**.

**Allowed:** check to authorize specific device accessing your LAN by insert the MAC Address in the space provided or click [Candidates](#) . Make sure your PC's MAC is listed.

**Blocked:** check to prevent unwanted device accessing the LAN by insert the MAC Address in the space provided or click [Candidates](#) . Make sure your PC's MAC is not listed.

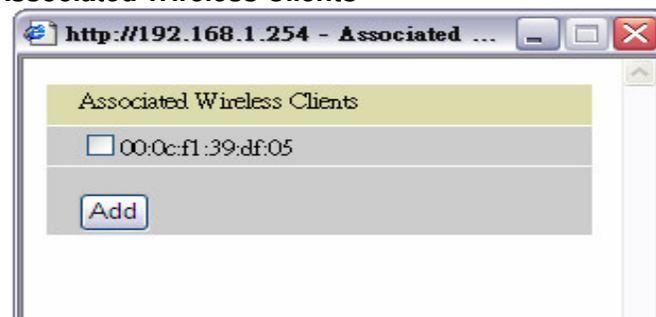

The maximum client is 16. The MAC addresses are 6 bytes long; they are presented only in hexadecimal characters. The number **0 - 9** and letters **a - f** are acceptable.

The maximum client is 16. The MAC addresses are 6 bytes long; they are presented only in hexadecimal characters. The number **0 - 9** and letters **a - f** are acceptable.

**(Note: Follow the MAC Address Format xx:xx:xx:xx:xx:xx. Semicolon ( : ) must be included)**

**Candidates:** it automatically detects devices connected to the router through the Ethernet. .

[Candidates](#) → **Associated Wireless Clients**

Associate Wireless Client displays a list of individual wireless device's MAC Address that currently connects to the router.

You can easily by checking the box next to the MAC address to be blocked or allowed. Then, **Add** to insert to the Wireless Client (MAC Address) Filter table. The maximum Ethernet client is 16.

## Port Setting

This section allows you to configure the settings for the router's Ethernet ports to solve some of the compatibility problems that may be encountered while connecting to the Internet, as well allowing users to tweak the performance of their network.

Port Setting	
Parameters	
Port1 Connection Type	Auto <input type="button" value="v"/>
Port2 Connection Type	Auto <input type="button" value="v"/>
Port3 Connection Type	Auto <input type="button" value="v"/>
IPv4 TOS Priority Control	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Set High Priority TOS	
<input type="checkbox"/> 63 <input type="checkbox"/> 62 <input type="checkbox"/> 61 <input type="checkbox"/> 60 <input type="checkbox"/> 59 <input type="checkbox"/> 58 <input type="checkbox"/> 57 <input type="checkbox"/> 56 <input type="checkbox"/> 55 <input type="checkbox"/> 54 <input type="checkbox"/> 53 <input type="checkbox"/> 52 <input type="checkbox"/> 51 <input type="checkbox"/> 50 <input type="checkbox"/> 49 <input type="checkbox"/> 48	
<input type="checkbox"/> 47 <input type="checkbox"/> 46 <input type="checkbox"/> 45 <input type="checkbox"/> 44 <input type="checkbox"/> 43 <input type="checkbox"/> 42 <input type="checkbox"/> 41 <input type="checkbox"/> 40 <input type="checkbox"/> 39 <input type="checkbox"/> 38 <input type="checkbox"/> 37 <input type="checkbox"/> 36 <input type="checkbox"/> 35 <input type="checkbox"/> 34 <input type="checkbox"/> 33 <input type="checkbox"/> 32	
<input type="checkbox"/> 31 <input type="checkbox"/> 30 <input type="checkbox"/> 29 <input type="checkbox"/> 28 <input type="checkbox"/> 27 <input type="checkbox"/> 26 <input type="checkbox"/> 25 <input type="checkbox"/> 24 <input type="checkbox"/> 23 <input type="checkbox"/> 22 <input type="checkbox"/> 21 <input type="checkbox"/> 20 <input type="checkbox"/> 19 <input type="checkbox"/> 18 <input type="checkbox"/> 17 <input type="checkbox"/> 16	
<input type="checkbox"/> 15 <input type="checkbox"/> 14 <input type="checkbox"/> 13 <input type="checkbox"/> 12 <input type="checkbox"/> 11 <input type="checkbox"/> 10 <input type="checkbox"/> 9 <input type="checkbox"/> 8 <input type="checkbox"/> 7 <input type="checkbox"/> 6 <input type="checkbox"/> 5 <input type="checkbox"/> 4 <input type="checkbox"/> 3 <input type="checkbox"/> 2 <input type="checkbox"/> 1 <input type="checkbox"/> 0	
<input type="button" value="Apply"/>	

**Port # Connection Type:** Five options to choose from: Auto, 10M half-duplex, 10M full-duplex, 100M half-duplex or 100M full-duplex. Sometimes, there are Ethernet compatibility problems with legacy Ethernet devices, and you can configure different types to solve compatibility issues. The default is **Auto**, which users should keep unless there are specific problems with PCs not being able to access your LAN.

**IPv4 TOS priority Control (Advanced users):** TOS, Type of Services, is the 2<sup>nd</sup> octet of an IP packet. Bits 6-7 of this octet are reserved and bit 0-5 are used to specify the priority of the packet.

This feature uses bits 0-5 to classify the packet's priority. If the packet is high priority, it will flow first and will not be constrained by the Rate Limit. Therefore, when this feature is enabled, the router's Ethernet switch will check the 2<sup>nd</sup> octet of each IP packet. If the value in the TOS field matches the checked values in the table (0 to 63), this packet will be treated as high priority.

## DHCP Server

You can disable or enable the DHCP (Dynamic Host Configuration Protocol) server or enable the router's DHCP relay functions. The DHCP protocol allows your router to dynamically assign IP addresses to PCs on your network if they are configured to obtain IP addresses automatically.

DHCP Server	
Configuration	
DHCP Server Mode	<input type="radio"/> Disable <input checked="" type="radio"/> DHCP Server <input type="radio"/> DHCP Relay Agent
<input type="button" value="Next"/>	

DHCP Server Status	
Allow Bootp	true
Allow Unknown Clients	true
Enable	true
Subnet Definitions	
Subnet Value	192.168.1.0
SubNetmask	255.255.255.0
Maximum Lease Time	86400 seconds
Default Lease Time	43200 seconds
Use local host address as DNS server	true
Use local host address as default gateway	true
Get subnet from IP interface	iplan
IP Range 192.168.1.100- 192.168.1.199	
Option <i>domain-name-servers</i> = 0.0.0.0	

To disable the router's DHCP Server, check **Disabled** and click **Next**, then click **Apply**. When the DHCP Server is disabled you will need to manually assign a fixed IP address to each PCs on your network, and set the default gateway for each PCs to the IP address of the router (by default this is 192.168.1.254).

To configure the router's DHCP Server, check **DHCP Server** and click **Next**. You can then configure parameters of the DHCP Server including the IP pool (starting IP address and ending IP address to be allocated to PCs on your network), lease time for each assigned IP address (the period of time the IP address assigned will be valid), DNS IP address and the gateway IP address. These details are sent to the DHCP client (i.e. your PC) when it requests an IP address from the DHCP server. Click **Apply** to enable this function. If you check "**Use Router as a DNS Server**", the ADSL Router will perform the domain name lookup, find the IP address from the outside network automatically and forward it back to the requesting PC in the LAN (your Local Area Network).

If you check **DHCP Relay Agent** and click **Next**, then you will have to enter the IP address of the DHCP server which will assign an IP address back to the DHCP client in the LAN. Use this function only if advised to do so by your network administrator or ISP.

Click **Apply** to enable this function.

## WAN (Wide Area Network)

WAN refers to your Wide Area Network connection, i.e. your router's connection to your ISP and the Internet. There are two items within the **WAN** section: **ISP**, **DNS** and **ADSL**.

### ISP

WAN Connection						
WAN Services Table						
Name	Description	Creator	VPI	VCI		
wanlink	PPPoE WAN Link	Factory Defaults	0	32	<a href="#">Edit</a> ▶	<a href="#">Change</a> ▶

The factory default is PPPoE. If your ISP uses this access protocol, click **Edit** to input other parameters as below. If your ISP does not use PPPoE, you can change the default WAN connection entry by clicking **Change**.

A simpler alternative is to select **Quick Start** from the main menu on the left. Please see the Quick Start section of the manual for more information.

**RFC 1483 Routed Connections**

<b>WAN Connection</b>	
<b>RFC 1483 Routed</b>	
Description	<input type="text" value="RFC 1483 routed mode"/>
VPI	<input type="text" value="0"/>
VCI	<input type="text" value="32"/>
ATM Class	<input type="text" value="UBR"/> ▾
NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Encapsulation Method	<input type="text" value="LLC Bridged"/> ▾
IP Assignment	<input checked="" type="radio"/> Obtain an IP address automatically via DHCP client
	<input type="radio"/> Use the following IP address
	IP Address <input type="text"/>
	Netmask <input type="text"/>
	Gateway <input type="text"/>
RIP	<input type="checkbox"/> RIP v1 <input type="checkbox"/> RIP v2 <input type="checkbox"/> RIP v2 Multicast
MTU	<input type="text" value="1500"/>
<input type="button" value="Apply"/>	

**Description:** Your description of this connection.

**VPI and VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**NAT:** The NAT (Network Address Translation) feature allows multiple users to access the Internet through a single IP account, sharing the single IP address. If users on your LAN have public IP addresses and can access the Internet directly, the NAT function can be disabled.

**Encapsulation method:** Selects the encapsulation format, the default is LLC Bridged. Select the one provided by your ISP.

**DHCP client:** Enable or disable the DHCP client, specify if the Router can get an IP address from the Internet Service Provider (ISP) automatically or not. Please click **Obtain an IP address automatically via DHCP client** to enable the DHCP client function or click Specify an IP address to disable the DHCP client function, and specify the IP address manually. Your ISP specifies the setting of this item.

**RIP:** RIP v1, RIP v2, and RIP v2 Multicast. Check to enable RIP function.

**MTU:** Maximum Transmission Unit. The size of the largest datagram (excluding media-specific headers) that IP will attempt to send through the interface.

**RFC 1483 Bridged Connections**

<b>WAN Connection</b>	
<b>RFC 1483 Bridged</b>	
Description	RFC 1483 bridged mode
VPI	0
VCI	34
ATM Class	UBR <input type="button" value="v"/>
Encapsulation Method	LLC Bridged <input type="button" value="v"/>
Acceptable Frame Type	ALL <input type="button" value="v"/>
Filter Type	All <input type="button" value="v"/>
PVID for Untagged Frames	1
<input type="button" value="Apply"/>	

**VPI and VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**Encapsulation method:** Select the encapsulation format, this is provided by your ISP.

**Ether Filter Type:** Specify the type of ethernet filtering performed by the named bridge interface.

<b>All</b>	Allows all types of ethernet packets through the port.
<b>Ip</b>	Allows only IP/ARP types of ethernet packets through the port.
<b>Pppoe</b>	Allows only PPPoE types of ethernet packets through the port.

**PVID for Untagged Frames:** PVID is known as Port VLAN Identifier. When an untagged packet is received by input port(s), this packet will be tagged with specified PVID. The valid value range for PVID is 1~4094.

**PPPoA Routed Connections**

<b>WAN Connection</b>	
<b>PPPoA Routed</b>	
Description	<input type="text" value="PPPoA Routed"/>
VPI	<input type="text" value="0"/>
VCI	<input type="text" value="32"/>
ATM Class	<input type="text" value="UBR"/> ▾
NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text"/>
Password	<input type="text"/>
IP Address	<input type="text" value="0.0.0.0"/> (0.0.0.0' means 'Obtain an IP address automatically')
Authentication Protocol	<input type="text" value="Chap(Auto)"/> ▾
Connection	<input type="text" value="Always On"/> ▾
Idle Timeout	<input type="text" value="0"/> minutes <a href="#">Details</a> ▶
RIP	<input type="checkbox"/> RIP v1 <input type="checkbox"/> RIP v2 <input type="checkbox"/> RIP v2 Multicast
MTU	<input type="text" value="1500"/>
<input type="button" value="Apply"/> <a href="#">Advanced Options</a> ▶	

**Description:** User-definable name for the connection.

**VPI/VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**NAT:** The NAT (Network Address Translation) feature allows multiple users to access the Internet through a single IP account, sharing a single IP address. If users on your LAN have public IP addresses and can access the Internet directly, the NAT function can be disabled.

**Username:** Enter the username provided by your ISP. You can input up to **128** alphanumeric characters (case sensitive). This will usually be in the format of “username@ispname” instead of simply “username”.

**Password:** Enter the password provided by your ISP. You can input up to **128** alphanumeric characters (case sensitive).

**IP Address:** Specify an IP address allowed to logon and access the router’s web server.. Note: IP 0.0.0.0 indicates all users who are connected to this router are allowed to logon the device and modify data.

**Authentication Protocol Type:** Default is **Chap (Auto)**. Your ISP will advise you whether to use **Chap** or **Pap**.

**Connection:**

**Ⓞ Always on:** If you want the router to establish a PPPoA session when starting up and to automatically re-establish the PPPoA session when disconnected by the ISP.

**Ⓞ Connect to Demand:** If you want to establish a PPPoA session only when there is a packet requesting access to the Internet (i.e. when a program on your computer attempts to access the Internet).

**Idle Timeout:** Auto-disconnect the broadband firewall gateway when there is no activity on the line for a predetermined period of time.

**Ⓞ Detail:** You can define the destination port and packet type (TCP/UDP) without checking by timer. It allows you to set which outgoing traffic will not trigger and reset the idle timer.

**RIP:** RIP v1, RIP v2, and RIP v2 Multicast. Check to enable RIP function.

**MTU:** Maximum Transmission Unit. The size of the largest datagram (excluding media-specific headers) that IP will attempt to send through the interface.

**Advanced Options (PPPoA)**

**LLC Header:** Selects encapsulation mode, true for using LLC or false for using VC-Mux.

**Create Route:** This setting specifies whether a route is added to the system after IPCP (Internet Protocol Control Protocol) negotiation is completed. If set to *enabled*, a route will be created which directs packets to the remote end of the PPP link.

**Specific Route:** Specifies whether the route created when a PPP link comes up is a specific or default route. If set to *enabled*, the route created will only apply to packets for the subnet at the remote end of the PPP link. The address of this subnet is obtained during IPCP negotiation.

**Subnet Mask:** sets the subnet mask used for the local IP interface connected to the PPP transport. If the value *0.0.0.0* is supplied, the netmask will be calculated from the class of the IP address obtained during IPCP negotiation.

**Route Mask:** Sets the subnet mask used by the route that is created when a PPP link comes up. If it is set to *0.0.0.0*, the subnet mask is determined by the IP address of the remote end of the link. The class of the IP address is obtained during IPCP (Internet Protocol Control Protocol) negotiation.

**MRU:** Maximum Receive Unit. This is negotiated during the LCP protocol stage.

**Discover Primary / Secondary DNS:** This setting enables/disables whether the primary/secondary DNS server address is requested from a remote PPP peer using IPCP. The default setting for this command is *enabled*.

**Give DNSto Relay:** Controls whether the PPP Internet Protocol Control Protocol (IPCP) can request the DNS server IP address for a remote PPP peer. Once IPCP has discovered the DNS server IP address, it automatically gives the address to the local DNS relay so that a connection can be established.

**Give DNSto Client:** Controls whether the PPP Internet Protocol Control Protocol (IPCP) can request a DNS server IP address for a remote PPP peer. Once IPCP has discovered the DNS server IP address, it automatically gives the address to the local DNS client so that a connection can be established.

**Give DNS to DHCP Server:** Similar to the above, but gives the DNS server address to the DHCP server.

**Discover Primary NBNS / Discover Secondary NBNS:** This setting enables/disables whether the primary/secondary NBNS server address is requested from a remote PPP peer using IPCP. The default setting for this command is disabled.

**Discover Subnet Mask:** Specifies if the subnet mask given by IPCP negotiation process is to be used.

**Give Subnet Mask To DHCP Server:** Enable to change your DHCP Server settings by using the given information in IPCP negotiation process.

IPoA Routed Connections

WAN Connection	
IPoA Routed	
Description	<input type="text" value="IPoA routed"/>
VPI	<input type="text" value="0"/>
VCI	<input type="text" value="32"/>
ATM Class	<input type="text" value="UBR"/> ▾
NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
IP Assignment	<input checked="" type="radio"/> Obtain an IP address automatically via DHCP client
	<input type="radio"/> Use the following IP address
	IP Address <input type="text"/>
	Netmask <input type="text"/>
	Gateway <input type="text"/>
RIP	<input type="checkbox"/> RIP v1 <input type="checkbox"/> RIP v2 <input type="checkbox"/> RIP v2 Multicast
MTU	<input type="text" value="1500"/>
<input type="button" value="Apply"/>	

**Description:** User-definable name for the connection.

**VPI/VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**NAT:** The NAT (Network Address Translation) feature allows multiple users to access the Internet through a single IP account, sharing a single IP address. If users on your LAN have public IP addresses and can access the Internet directly, the NAT function can be disabled.

**DHCP client:** Enable or disable the DHCP client, specifying if the router can obtain an IP address from the Internet Service Provider (ISP) automatically or not. Please click **Obtain an IP address automatically via DHCP client** to enable the DHCP client function or click **Specify an IP address** to disable the DHCP client function, and specify the IP address manually. Your ISP specifies the setting of this item.

**RIP:** RIP v1, RIP v2, and RIP v2 Multicast. Check to enable RIP function.

**MTU:** Maximum Transmission Unit. The size of the largest datagram (excluding media-specific headers) that IP will attempt to send through the interface.

**PPPoE Connections**

<b>WAN Connection</b>	
<b>PPPoE Routed</b>	
Description	PPPoE WAN Link
VPI	0
VCI	32
ATM Class	UBR <input type="button" value="v"/>
NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text"/>
Password	<input type="text"/>
Service Name	<input type="text"/>
IP Address	0.0.0.0 (0.0.0.0' means 'Obtain an IP address automatically')
Authentication Protocol	Chap(Auto) <input type="button" value="v"/>
Connection	Always On <input type="button" value="v"/>
Idle Timeout	0 minutes <a href="#">Details</a> <input type="button" value="▶"/>
RIP	<input type="checkbox"/> RIP v1 <input type="checkbox"/> RIP v2 <input type="checkbox"/> RIP v2 Multicast
MTU	1492
<input type="button" value="Apply"/> <a href="#">Advanced Options</a> <input type="button" value="▶"/>	

**Description:** A user-definable name for this connection.

**VPI/VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**NAT:** The NAT (Network Address Translation) feature allows multiple users to access the Internet through a single ISP account, sharing a single IP address. If users on your LAN have public IP addresses and can access the Internet directly, the NAT function can be disabled.

**Username:** Enter the username provided by your ISP. You can input up to **128** alphanumeric characters (case sensitive). This will usually be in the format of “username@ispname” instead of simply “username”.

**Password:** Enter the password provided by your ISP. You can input up to **128** alphanumeric characters (case sensitive).

**Service Name:** This item is for identification purposes. If it is required, your ISP will provide you the information. Maximum input is **20** alphanumeric characters.

**IP Address:** specify if the Router can get an IP address from the Internet Server Provider (ISP) automatically or not. Please click Obtain an IP address automatically via DHCP client to enable the DHCP client function or click Specify an IP address to disable the DHCP client function, and specify the IP address manually. The setting of this item is specified by your ISP.

**Authentication Protocol:** Default is **Chap(Auto)**. Your ISP will advise you whether to use **Chap** or **Pap**.

**Connection:**

☉ **Always on:** If you want the router to establish a PPPoE session when starting up and to automatically re-establish the PPPoE session when disconnected by the ISP.

☉ **Connect to Demand:** If you want to establish a PPPoE session only when there is a packet requesting access to the Internet (i.e. when a program on your computer attempts to access the Internet).

**Idle Timeout:** Auto-disconnect the broadband firewall gateway when there is no activity on the line for a predetermined period of time.

☉ **Detail:** You can define the destination port and packet type (TCP/UDP) without checking by timer. It allows you to set which outgoing traffic will not trigger and reset the idle timer.

**RIP:** RIP v1, RIP v2, and RIP v2 Multicast. Check to enable RIP function.

**MTU:** Maximum Transmission Unit. The size of the largest datagram (excluding media-specific headers) that IP will attempt to send through the interface.

**Advanced Options (PPPoE)**

**LLC Header:** Selects encapsulation mode, true for using LLC or false for using VC-Mux.

**Create Route:** This setting specifies whether a route is added to the system after IPCP (Internet Protocol Control Protocol) negotiation is completed. If set to *enabled*, a route will be created which directs packets to the remote end of the PPP link.

**Specific Route:** Specifies whether the route created when a PPP link comes up is a specific or default route. If set to *enabled*, the route created will only apply to packets for the subnet at the remote end of the PPP link. The address of this subnet is obtained during IPCP negotiation.

**Subnet Mask:** sets the subnet mask used for the local IP interface connected to the PPP transport. If the value *0.0.0.0* is supplied, the netmask will be calculated from the class of the IP address obtained during IPCP negotiation.

**Route Mask:** Sets the subnet mask used by the route that is created when a PPP link comes up. If it is set to *0.0.0.0*, the subnet mask is determined by the IP address of the remote end of the link. The class of the IP address is obtained during IPCP (Internet Protocol Control Protocol) negotiation.

**MRU:** Maximum Receive Unit. This is negotiated during the LCP protocol stage.

**Discover Primary / Secondary DNS:** This setting enables/disables whether the primary/secondary DNS server address is requested from a remote PPP peer using IPCP. The default setting for this command is *enabled*.

**Give DNS to Relay:** Controls whether the PPP Internet Protocol Control Protocol (IPCP) can request the DNS server IP address for a remote PPP peer. Once IPCP has discovered the DNS server IP address, it automatically gives the address to the local DNS relay so that a connection can be established.

**Give DNS to Client:** Controls whether the PPP Internet Protocol Control Protocol (IPCP) can request a DNS server IP address for a remote PPP peer. Once IPCP has discovered the DNS

server IP address, it automatically gives the address to the local DNS client so that a connection can be established.

**Give DNS to DHCP Server:** Similar to the above, but gives the DNS server address to the DHCP server.

**Discover Primary NBNS / Discover Secondary NBNS:** This setting enables/disables whether the primary/secondary NBNS server address is requested from a remote PPP peer using IPCP. The default setting for this command is disabled.

**Discover Subnet Mask:** Specifies if the subnet mask given by IPCP negotiation process is to be used.

**Give Subnet Mask To DHCP Server:** Enable to change your DHCP Server settings by using the given information in IPCP negotiation process.

## DNS

DNS	
Parameters	
Obtain DNS automatically	<input checked="" type="checkbox"/> Enable
Primary DNS	<input type="text"/>
Secondary DNS	<input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

A Domain Name System (DNS) contains a mapping table for domain name and IP addresses. On the Internet, every host has a unique and user-friendly name (domain name) such as `www.helloworld.com` and an IP address. An IP address is a 32-bit number in the form of `xxx.xxx.xxx.xxx`, for example `192.168.1.254`. You can think of an IP address as a telephone number for devices on the Internet, and the DNS will allow you to find the telephone number for any particular domain name. As an IP Address is hard to remember, the DNS converts the friendly name into its equivalent IP Address.

You can obtain a Domain Name System (DNS) IP address automatically if your ISP has provided it when you logon, check the **Enable** box. Usually when you choose PPPoE or PPPoA as your WAN - ISP protocol, the ISP will provide the DNS IP address automatically. You may leave the configuration field blank.

Alternatively, your ISP may provide you with an IP address of their DNS. If this is the case, you must enter the DNS IP address manually.

If you choose one of the other three protocols – RFC1483 Routed/Bridged and IPoA check with your ISP, it may provide you with an IP address for their DNS server. You must enter the DNS IP address if you set the DNS of your PC to the LAN IP address of this router.

## ADSL

ADSL	
Parameters	
Connect Mode	ADSL2+, auto-fallback
Modulation	G.Dmt.BisPlusAuto
Profile Type	MAIN
Activate Line	true
Coding Gain	auto
Tx Attenuation	Bis_0DB
DSP Firmware Version	E.38.2.12
Connected	false
Operational Mode	Inactive
Annex Type	ADSL2
Upstream	0
Downstream	0
CO Vendor	
Elapsed Time	
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

**Connect Mode:** The default setting is **Multimode**. This mode will automatically detect your ADSL line code, G.dmt, G.lite, and T1.413. But in some area, multimode cannot detect the ADSL line code well. If it is the case, please adjust the ADSL line code to G.dmt or T1.413 first. If it still fails, please try the other values such as ALCTL, ADI, etc.

**Activate Line:** Aborting (false) your ADSL line and making it active (true) again for taking effect with setting of **Connect Mode**.

**Coding Gain:** Configure the ADSL coding gain from 0 dB to 7dB, or automatic.

**Tx Attenuation:** Setting ADSL transmission gain, the value is between 0~12.

**DSP FirmwareVersion:** Current ADSL line code firmware version.

**Connected:** Display current ADSL line sync status.

**Operational Mode:** Display current ADSL mode standard (Operational Mode) your Router is using when ADSL line has sync.

**Annex Type:** ADSL Annex A, which works over a standard telephone line. Annex B, which works over an ISDN line.

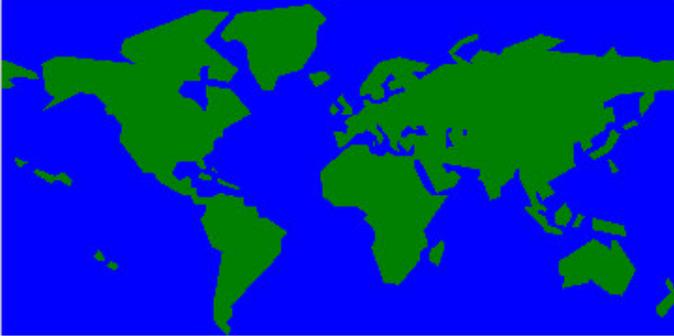

**Upstream:** Display current upstream rate of your ADSL line.

**Downstream:** Display current downstream rate of your ADSL line.

## System

There are six items within the **System** section: [Time Zone](#), [Remote Access](#), [Firmware Upgrade](#), [Backup/Restore](#), [Restart](#) and [User Management](#).

### Time Zone

Time Zone	
Parameters	
Time Zone	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Time Zone List	<input checked="" type="radio"/> By City <input type="radio"/> By Time Difference
Local Time Zone (+-GMT Time)	(GMT)Greenwich Mean Time <span style="float: right;">▼</span>
SNTP Server IP Address	1. <input type="text" value="carl.css.gov"/> 2. <input type="text" value="india.colorado.edu"/>
	3. <input type="text" value="time.nist.gov"/> 4. <input type="text" value="time-b.nist.gov"/>
Daylight Saving	<input checked="" type="checkbox"/> Automatic
Resync Period	<input type="text" value="1440"/> minutes
	
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

The router does not have a real time clock on board; instead, it uses the Simple Network Time Protocol (SNTP) to get the current time from an SNTP server outside your network. Choose your local time zone, click **Enable** and click the **Apply** button. After a successful connection to the Internet, the router will retrieve the correct local time from the SNTP server you have specified. If you prefer to specify an SNTP server other than those in the list, simply enter its IP address as shown above. Your ISP may provide an SNTP server for you to use.

**Daylight Saving** is also known as **Summer Time Period**. Many places in the world adapt it during summer time to move one hour of daylight from morning to the evening in local standard time. Check **Automatic** box to auto set your local time.

**Resync Period** (in minutes) is the periodic interval the router will wait before it re-synchronizes the router's time with that of the specified SNTP server. In order to avoid unnecessarily increasing the load on your specified SNTP server you should keep the poll interval as high as possible – at the absolute minimum every few hours or even days.

## Remote Access

### Remote Access

You may temporarily permit remote administration of this network device

Allow Access for  minutes.

To temporarily permit remote administration of the router (i.e. from outside your LAN), select a time period the router will permit remote access for and click **Enable**. You may change other configuration options for the web administration interface using **Device Management** options in the **Advanced** section of the GUI.

If you wish to permanently enable remote access, choose a time period of 0 minutes. This setting cannot be saved into flash when timer set to zero.

## Firmware Upgrade

Firmware Upgrade	
You may upgrade the system software on your network device	
New Firmware Image	<input type="text"/> <input type="button" value="Browse..."/>
<input type="button" value="Upgrade"/>	

Your router's "firmware" is the software that allows it to operate and provides all its functionality. Think of your router as a dedicated computer, and the firmware as the software it runs. Over time this software may be improved and modified, and your router allows you to upgrade the software it runs to take advantage of these changes.

Clicking on **Browse** will allow you to select the new firmware image file you have downloaded to your PC. Once the correct file is selected, click Upgrade to update the firmware in your router.

### **Warning**

DO NOT power down the router or interrupt the firmware upgrading while it is still in process. Improper operation could damage the router.

## Backup / Restore

**Backup/Restore**

Allows you to backup the configuration settings to your computer, or restore configuration from your computer.

**Backup Configuration**

Backup configuration to your computer.

**Restore Configuration**

Configuration File

*"Restore" will overwrite the current configuration and restart the device. If you want to keep the current configuration, please use "Backup" first to save current configuration.*

These functions allow you to save and backup your router's current settings to a file on your PC, or to restore a previously saved backup. This is useful if you wish to experiment with different settings, knowing that you have a backup handy in the case of any mistakes. It is advisable to backup your router's settings before making any significant changes to your router's configuration.

Press **Backup** to select where on your local PC to save the settings file. You may also change the name of the file when saving if you wish to keep multiple backups.

Press **Browse** to select a file from your PC to restore. You should only restore settings files that have been generated by the Backup function, and that were created when using the **current version** of the router's firmware. **Settings files saved to your PC should not be manually edited in any way.**

After selecting the settings file you wish to use, pressing **Restore** will load those settings into the router.

## Restart Router

Click **Restart** with option **Current Settings** to reboot your router (and restore your last saved configuration).

Restart Router	
After restarting. Please wait for several seconds to let the system	
Restart Router with	<input checked="" type="radio"/> Current Settings
	<input type="radio"/> Factory Default Settings
<input type="button" value="Restart"/>	

If you wish to restart the router using the factory default settings (for example, after a firmware upgrade or if you have saved an incorrect configuration), select **Factory Default Settings** to reset to factory default settings.

You may also reset your router to factory settings by holding the small Reset pinhole button on the back of your router in for 10-12 seconds whilst the router is turned on.

## User Management

User Management				
Current Defined Users				
Valid	User	Comment		
true	admin	Default admin user	Edit 	
Create 				

In order to prevent unauthorized access to your router's configuration interface, it requires all users to login with a password. You can set up multiple user accounts, each with their own password.

You are able to **Edit** existing users and **Create** new users who are able to access the device's configuration interface. Once you have clicked on **Edit**, you are shown the following options:

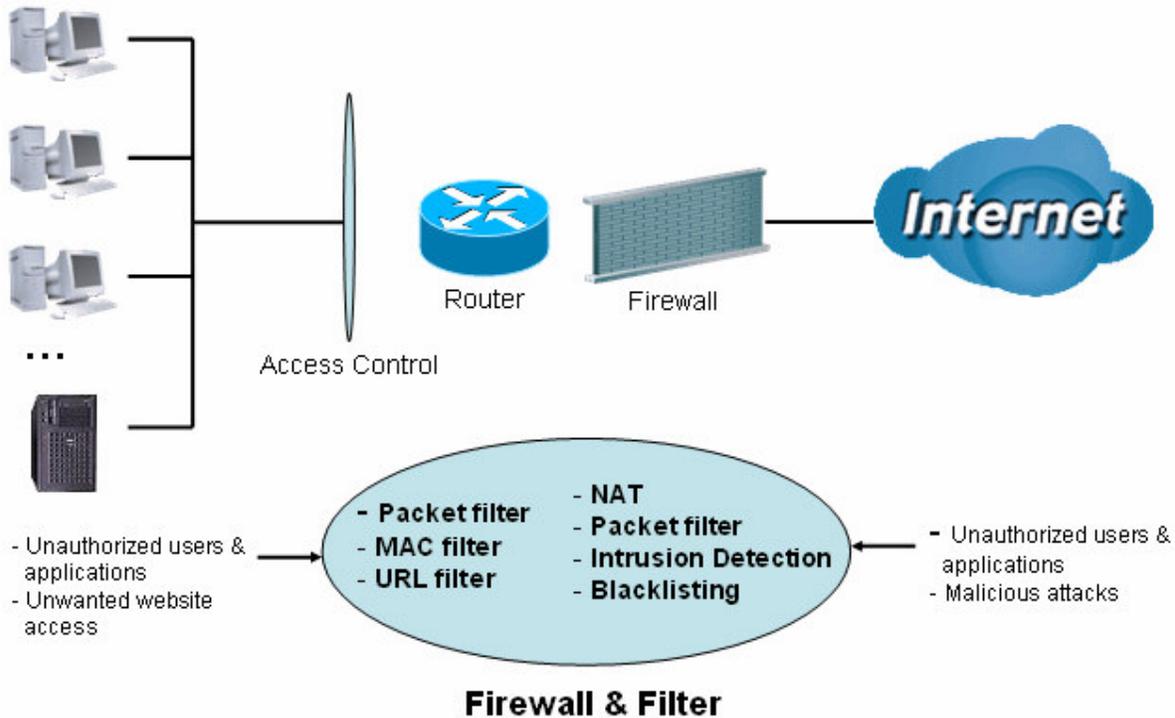

User Management	
Edit	
Username	admin
Password	*****
Confirm	*****
Valid	true 
Comment	Default admin user
<input type="button" value="Apply"/> <input type="button" value="Reset"/>	

You can change the user's **password**, whether their account is active and **Valid**, as well as add a comment to each user account. These options are the same when creating a user account, with the exception that once created you cannot change the username. You cannot delete the default admin account, however you can delete any other created accounts by clicking **Delete** when editing the user.

You are strongly advised to change the password on the default "**admin**" account when you receive your router, and any time you reset your configuration to Factory Defaults.

## Firewall and Access Control

Your router includes a full SPI (Stateful Packet Inspection) firewall for controlling Internet access from your LAN, as well as helping to prevent attacks from hackers. In addition to this, when using NAT (Network Address Translation. Please see the **WAN** configuration section for more details on NAT) the router acts as a “natural” Internet firewall, as all PCs on your LAN will use private IP addresses that cannot be directly accessed from the Internet.

**Firewall:** Prevents access from outside your network. The router provides three levels of security support:

**NAT natural firewall:** This masks LAN users' IP addresses which are invisible to outside users on the Internet, making it much more difficult for a hacker to target a machine on your network. This natural firewall is on when NAT function is enabled.

*When using Virtual Servers your PCs will be exposed to the degree specified in your Virtual Server settings provided the ports specified are opened in your firewall packet filter settings.*

**Firewall Security and Policy (General Settings):** Inbound direction of Packet Filter rules to prevent unauthorized computers or applications accessing your local network from the Internet.

**Intrusion Detection:** Enable Intrusion Detection to detect, prevent and log malicious attacks.

**Access Control:** Prevents access from PCs on your local network:

**Firewall Security and Policy (General Settings):** Outbound direction of Packet Filter rules to prevent unauthorized computers or applications accessing the Internet.

**URL Filter:** To block PCs on your local network from unwanted websites.

You can find six items under the **Firewall** section: [General Settings](#), [Packet Filter](#), [Intrusion Detection](#), [URL Filter](#) and [Firewall Log](#).

## General Settings

You can choose not to enable Firewall, to add all filter rules by yourself, or enable the Firewall using preset filter rules and modify the port filter rules as required. The Packet Filter is used to filter packets based-on Applications (Port) or IP addresses.

There are four options when you enable the Firewall, they are:

- ⊙ **All blocked/User-defined:** no pre-defined port or address filter rules by default, meaning that all inbound (Internet to LAN) and outbound (LAN to Internet) packets will be blocked. Users have to add their own filter rules for further access to the Internet.
- ⊙ **High/Medium/Low security level:** the predefined port filter rules for High, Medium and Low security are displayed in Port Filters of Packet Filter.

Select either **High, Medium** or **Low security level** to enable the Firewall. The only difference between these three security levels is the preset port filter rules in the Packet Filter. Firewall functionality is the same for all levels; it is only the list of preset port filters that changes between each setting. For more detailed on level of preset port filter information, refer to **Table 1: Predefined Port Filter**.

If you choose of the preset security levels and then add custom filters, you may temporarily disable the firewall and recover your custom filter settings by re-selecting the same security level.

The “**Block WAN Request**” is a stand-alone function and not relate to whether security enable or disable. Mostly it is for preventing any scan tools from WAN site by hacker.

General Settings	
Firewall Security	
Security	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Policy	All blocked/User-defined
	High security level
	Medium security level
	Low security level
<p>( If some applications cannot work after enabling Firewall, please check the Packet Filter especially Port Filter rules. For example, adding (TCP:443,outbound allowed) will let HTTPS data go through Firewall.)</p>	
Block WAN Request	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
<p>( Enable for preventing any ping test from Internet, such as hacker attack.)</p>	
<input type="button" value="Apply"/>	

Any remote user who is attempting to perform this action may result in blocking all the accesses to configure and manage of the device from the Internet.

## Packet Filter

This function is only available when the Firewall is enabled and one of these four security levels is chosen (All blocked, High, Medium and Low). The predefined port filter rules in the Packet Filter must modify accordingly to the level of Firewall, which is selected. See **Table1: Predefined Port Filter** for more detailed information.

### Packet Filter

[Add TCP/UDP Filter ▶](#)
[Add Raw IP Filter ▶](#)

Packet Filter Rules							
Rule Name	Time Schedule	Source IP / Netmask	Protocol	Source port(s)	Inbound	Edit ▶	Delete ▶
		Destination IP / Netmask		Destination port(s)	Outbound		
lei_http	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		80 ~ 80	Allow		
lei_dns	Always On	0.0.0.0 / 0.0.0.0	UDP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
lei_tdns	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
lei_ftp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		21 ~ 21	Allow		
lei_tnet	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		23 ~ 23	Allow		
lei_smtp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		25 ~ 25	Allow		
lei_pop3	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		110 ~ 110	Allow		

**Example: Predefined Port Filters Rules**

The predefined port filter rules for High, Medium and Low security levels are listed. See Table 1.

**(Note: Firewall – All Blocked/User-defined, you must define and create the port filter rules yourself. No predefined rule is set)**

**Table 1: Predefined Port Filter**

Application	Protocol	Port Number		Firewall - High		Firewall - Medium		Firewall – Low	
		Start	End	Inbound	Outbound	Inbound	Outbound	Inbound	Outbound
HTTP(80)	TCP(6)	80	80	NO	YES	NO	YES	NO	YES
DNS (53)	UDP(17)	53	53	NO	YES	NO	YES	YES	YES
DNS (53)	TCP(6)	53	53	NO	YES	NO	YES	YES	YES
FTP(21)	TCP(6)	21	21	NO	NO	NO	YES	NO	YES
Telnet(23)	TCP(6)	23	23	NO	NO	NO	YES	NO	YES
SMTP(25)	TCP(6)	25	25	NO	YES	NO	YES	NO	YES
POP3(110)	TCP(6)	110	110	NO	YES	NO	YES	NO	YES
NEWS(119)	TCP(6)	119	119	NO	NO	NO	YES	NO	YES
RealAudio (7070)	UDP(17)	7070	7070	NO	NO	YES	YES	YES	YES
PING	ICMP(1)	N/A	N/A	NO	YES	NO	YES	NO	YES
H.323(1720)	TCP(6)	1720	1720	NO	NO	NO	YES	YES	YES
T.120(1503)	TCP(6)	1503	1503	NO	NO	NO	YES	YES	YES
SSH(22)	TCP(6)	22	22	NO	NO	NO	YES	YES	YES
NTP(123)	UDP(17)	123	123	NO	YES	NO	YES	NO	YES
HTTPS(443)	TCP(6)	443	443	NO	NO	NO	YES	NO	YES
ICQ (5190)	TCP(6)	5190	5190	NO	NO	NO	NO	YES	YES

**Inbound:** Internet to LAN

**Outbound:** LAN to Internet.

**Packet Filter – Add TCP/UDP Filter**

Packet Filter			
Add TCP/UDP Filter			
Rule Name <a href="#">Helper</a> ▶	<input type="text"/>		
Time Schedule	Always On ▼		
Source IP Address(es)	<input type="text" value="0.0.0.0"/>	Netmask	<input type="text" value="0.0.0.0"/>
Destination IP Address(es)	<input type="text" value="0.0.0.0"/>	Netmask	<input type="text" value="0.0.0.0"/>
Type	TCP ▼		
Source Port	<input type="text" value="0"/> - <input type="text" value="65535"/>		
Destination Port	<input type="text" value="0"/> - <input type="text" value="65535"/>		
Inbound	Allow ▼		
Outbound	Allow ▼		
<input type="button" value="Apply"/> <a href="#">Return</a> ▶			

**Rule Name:** Users-define description to identify this entry or click [Helper](#) ▶ to select existing predefined rules.

**Time Schedule:** It is self-defined time period. You may specify a time schedule for your prioritization policy. For setup and detail, refer to **Time Schedule** section

**Source IP Address(es) / Destination IP Address(es):** This is the Address-Filter used to allow or block traffic to/from particular IP address(es). Selecting the **Subnet Mask** of the IP address range you wish to allow/block the traffic to or from; set IP address and Subnet Mask to **0.0.0.0** to inactive the Address-Filter rule.

**Tip:** To block access, to/from a single IP address, enter that IP address as the **Host IP Address** and use a **Host Subnet Mask** of "255.255.255.255".

**Type:** It is the packet protocol type used by the application, select either **TCP** or **UDP**.

**Source Port:** This Port or Port Ranges defines the port allowed to be used by the Remote/WAN to connect to the application. Default is set from range **0 ~ 65535**. It is recommended that this option be configured by an advanced user.

**Destination Port:** This is the Port or Port Ranges that defines the application.

**Inbound / Outbound:** Select **Allow** or **Block** the access to the Internet ("Outbound") or from the Internet ("Inbound").

Click **Apply** button to apply your changes.

**Packet Filter – Add Raw IP Filter**

Packet Filter	
Add Raw IP Filter	
Rule Name <a href="#">Helper</a> ▶	<input type="text"/>
Time Schedule	Always On ▼
Protocol Number	<input type="text"/>
Inbound	Allow ▼
Outbound	Allow ▼
<input type="button" value="Apply"/> <a href="#">Return</a> ▶	

**Rule Name:** Users-define description to identify this entry or click [Helper](#) ▶ to select existing predefined rules.

**Time Schedule:** It is self-defined time period. You may specify a time schedule for your prioritization policy. For setup and detail, refer to **Time Schedule** section

**Protocol Number:** Insert the port number, i.e. GRE 47.

**Inbound / Outbound:** Select **Allow** or **Block** the access to the Internet (“**Outbound**”) or from the Internet (“**Inbound**”).

Click **Apply** button to apply your changes.

**Example: Configuring your firewall to allow for a publicly accessible web server on your LAN**

The predefined port filter rule for HTTP (TCP port 80) is the same no matter whether the firewall is set to a high, medium or low security level. To setup a web server located on the local network when the firewall is enabled, you have to configure the Port Filters setting for HTTP.

As you can see from the diagram below, when the firewall is enabled with one of the three presets (Low/Medium/High), inbound HTTP access is not allowed which means remote access through HTTP to your router is not allowed.

(Note: Inbound indicates accessing from Internet to LAN and Outbound is from LAN to the Internet)

Packet Filter Rules							
Rule Name	Time Schedule	Source IP / Netmask	Protocol	Source port(s)	Inbound	Edit 	Delete 
		Destination IP / Netmask		Destination port(s)	Outbound		
mei_http	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		80 ~ 80	Allow		
mei_dns	Always On	0.0.0.0 / 0.0.0.0	UDP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
mei_tdns	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
mei_ftp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		21 ~ 21	Allow		
mei_tnet	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		23 ~ 23	Allow		
mei_smtp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		25 ~ 25	Allow		
mei_pop3	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		110 ~ 110	Allow		
mei_nntp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Edit 	Delete 
		0.0.0.0 / 0.0.0.0		119 ~ 119	Allow		

**Configuring Packet Filter:**

1. Click **Port Filters**. You will then be presented with the predefined port filter rules screen (in this case for the low security level), shown below:

**Note:** You may click **Edit** the predefined rule instead of **Delete** it. This is an example to show to how you add a filter on your own.

Packet Filter							
Add TCP/UDP Filter ▶				Add Raw IP Filter ▶			
Packet Filter Rules							
Rule Name	Time Schedule	Source IP / Netmask	Protocol	Source port(s)	Inbound	Edit ▶	Delete ▶
		Destination IP / Netmask		Destination port(s)	Outbound		
mei_http	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Delete ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		80 ~ 80	Allow		
mei_dns	Always On	0.0.0.0 / 0.0.0.0	UDP	0 ~ 65535	Block	Delete ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
mei_tdns	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Delete ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		53 ~ 53	Allow		
mei_ftp	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Delete ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		21 ~ 21	Allow		
mei_tnet	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Block	Delete ▶	Delete ▶
		0.0.0.0 / 0.0.0.0		23 ~ 23	Allow		

2. Click **Delete** to delete the existing HTTP rule.
3. Click **Add TCP/UDP Filter**.

Port Filters		
Filtering Rules		
Add TCP/UDP Filter ▶	Add Raw IP Filter ▶	Return ▶

4. Input the Rule Name, Time Schedule, Source/Destination IP, Type, Source/Destination Port, Inbound and Outbound.

**Example:**

Application: *Cindy\_HTTP*

Time Schedule: *Always On*

Source / Destination IP Address(es): *0.0.0.0 (I do not wish to active the address-filter, instead I use the port-filter)*

Type: *TCP (Please refer to Table1: Predefined Port Filter)*

Source Port: *0-65535 (I allow all ports to connect with the application)*

Redirect Port: *80-80 (This is Port defined for HTTP)*

Inbound / Outbound: *Allow*

### Packet Filter

#### Add TCP/UDP Filter

Rule Name	Cindy_HTTP		
Time Schedule	Always On		
Source IP Address(es)	0.0.0.0	Netmask	0.0.0.0
Destination IP Address(es)	0.0.0.0	Netmask	0.0.0.0
Type	TCP		
Source Port	0 - 65535		
Destination Port	80 - 80		
Inbound	Allow		
Outbound	Allow		

5. The new port filter rule for HTTP is shown below:

Cindy_HTTP	Always On	0.0.0.0 / 0.0.0.0	TCP	0 ~ 65535	Allow	<input type="button" value="Edit"/> <input type="button" value="Delete"/>
		0.0.0.0 / 0.0.0.0		80 ~ 80	Allow	

7. Configure your Virtual Server ("port forwarding") settings so that incoming HTTP requests on port 80 will be forwarded to the PC running your web server:

**Note:** For how to configure the HTTP in Virtual Server, go to [Add Virtual Server](#) in [Virtual Server](#) section for more details.

### Virtual Server (Port Forwarding)

Virtual Server Table							
Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address		
HTTP_Server	Always On	tcp	80 - 80	80 - 80	192.168.1.254	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>

## Intrusion Detection

Intrusion Detection	
Parameters	
Intrusion Detection	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Victim Protection Block Duration	<input type="text" value="600"/> seconds
Scan Attack Block Duration	<input type="text" value="86400"/> seconds
DOS Attack Block Duration	<input type="text" value="1800"/> seconds
Maximum TCP Open Handshaking Count	<input type="text" value="100"/> per second
Maximum Ping Count	<input type="text" value="15"/> per second
Maximum ICMP Count	<input type="text" value="100"/> per second
<input type="button" value="Apply"/>	
<input type="button" value="Clear Blacklist"/>	

The router's *Intrusion Detection System* (IDS) is used to detect hacker attacks and intrusion attempts from the Internet. If the IDS function of the firewall is enabled, inbound packets are filtered and blocked depending on whether they are detected as possible hacker attacks, intrusion attempts or other connections that the router determines to be suspicious.

**Blacklist:** If the router detects a possible attack, the source IP or destination IP address will be added to the Blacklist. Any further attempts using this IP address will be blocked for the time period specified as the **Block Duration**. The default setting for this function is false (disabled). Some attack types are denied immediately without using the Blacklist function, such as *Land attack* and *Echo/CharGen scan*.

**Intrusion Detection:** If enabled, IDS will block Smurf attack attempts. Default is false.

**Block Duration:**

- ⊙ **Victim Protection Block Duration:** This is the duration for blocking *Smurf* attacks. Default value is 600 seconds.
- ⊙ **Scan Attack Block Duration:** This is the duration for blocking hosts that attempt a possible Scan attack. Scan attack types include *X'mas scan*, *IMAP SYN/FIN scan* and similar attempts. Default value is 86400 seconds.
- ⊙ **DoS Attack Block Duration:** This is the duration for blocking hosts that attempt a possible Denial of Service (DoS) attack. Possible DoS attacks this attempts to block include *Ascend Kill* and *WinNuke*. Default value is 1800 seconds.

**Max TCP Open Handshaking Count:** This is a threshold value to decide whether a *SYN Flood* attempt is occurring or not. Default value is 100 TCP SYN per seconds.

**Max PING Count:** This is a threshold value to decide whether an *ICMP Echo Storm* is occurring or not. Default value is 15 ICMP Echo Requests (PING) per second.

**Max ICMP Count:** This is a threshold to decide whether an *ICMP flood* is occurring or not. Default value is 100 ICMP packets per seconds except ICMP Echo Requests (PING).

For *SYN Flood*, *ICMP Echo Storm* and *ICMP flood*, IDS will just warn the user in the Event Log. It cannot protect against such attacks.

**Table 2: Hacker attack types recognized by the IDS**

Intrusion Name	Detect Parameter	Blacklist	Type of Block Duration	Drop Packet	Show Log
<b>Ascend Kill</b>	Ascend Kill data	Src IP	DoS	Yes	Yes
<b>WinNuke</b>	TCP Port 135, 137~139, Flag: URG	Src IP	DoS	Yes	Yes
<b>Smurf</b>	ICMP type 8 Des IP is broadcast	Dst IP	Victim Protection	Yes	Yes
<b>Land attack</b>	SrcIP = DstIP			Yes	Yes
<b>Echo/CharGen Scan</b>	UDP Echo Port and CharGen Port			Yes	Yes
<b>Echo Scan</b>	UDP Dst Port = Echo(7)	Src IP	Scan	Yes	Yes
<b>CharGen Scan</b>	UDP Dst Port = CharGen(19)	Src IP	Scan	Yes	Yes
<b>X'mas Tree Scan</b>	TCP Flag: X'mas	Src IP	Scan	Yes	Yes
<b>IMAP SYN/FIN Scan</b>	TCP Flag: SYN/FIN DstPort: IMAP(143) SrcPort: 0 or 65535	Src IP	Scan	Yes	Yes
<b>SYN/FIN/RST/ACK Scan</b>	TCP, No Existing session And Scan Hosts more than five.	Src IP	Scan	Yes	Yes
<b>Net Bus Scan</b>	TCP No Existing session DstPort = Net Bus 12345,12346, 3456	SrcIP	Scan	Yes	Yes
<b>Back Orifice Scan</b>	UDP, DstPort = Orifice Port (31337)	SrcIP	Scan	Yes	Yes
<b>SYN Flood</b>	Max TCP Open Handshaking Count (Default 100 c/sec)				Yes
<b>ICMP Flood</b>	Max ICMP Count (Default 100 c/sec)				Yes
<b>ICMP Echo</b>	Max PING Count (Default 15 c/sec)				Yes

**Src IP:** Source IP  
**Dst Port:** Destination Port

**Src Port:** Source Port  
**Dst IP:** Destination IP

## URL Filtering

URL (Uniform Resource Locator – e.g. an address in the form of <http://www.abcde.com> or <http://www.example.com>) filter rules allow you to prevent users on your network from accessing particular websites by their URL. There are no pre-defined URL filter rules; you can add filter rules to meet your requirements.

URL Filter	
Configuration	
URL Filtering	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Block Mode	Disabled ▾
Keywords Filtering	<input type="checkbox"/> Enable <a href="#">Details</a> ▶
Domains Filtering	<input type="checkbox"/> Enable <a href="#">Details</a> ▶
	<input type="checkbox"/> Disable all WEB traffic except for Trusted Domains
Restrict URL Features	<input type="checkbox"/> Block Java Applet
	<input type="checkbox"/> Block surfing by IP address
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

**Enable/Disable:** To enable or disable URL Filter feature.

**Block Mode:** A list of the modes that you can choose to check the URL filter rules. The default is set to **Disabled**.

**Disabled:** No action will be performed by the Block Mode.

**Always On:** Action is enabled. URL filter rules will be monitoring and checking at all hours of the day.

**TimeSlot1 ~ TimeSlot16:** It is self-defined time period. You may specify the time period to check the URL filter rules, i.e. during working hours. For setup and detail, refer to **Time Schedule** section.

**Keywords Filtering:** Allows blocking by specific keywords within a particular URL rather than having to specify a complete URL (e.g. to block any image called “advertisement.gif”). When enabled, your specified keywords list will be checked to see if any keywords are present in URLs accessed to determine if the connection attempt should be blocked. Please note that the URL filter blocks web browser (HTTP) connection attempts using port 80 only.

For example, if the URL is <http://www.abc.com/abcde.html>, it will be dropped as the keyword “abcde” occurs in the URL.

## Keywords Filtering

### Create

Keyword	<input type="text"/>
<input type="button" value="Apply"/>	

### Block WEB URLs which contain these keywords

Name	Keyword	
item0	abcde	Delete

Domains Filtering: This function checks the domain name only, not the IP address, in URLs accessed against your list of domains to block or allow. If it is matched, the URL request will be sent (Trusted) or dropped (Forbidden). For this function to be activated, **both check-boxes must be checked**. The checking procedure is:

1. Check the domain in the URL to determine if it is in the trusted list. If yes, the connection attempt is sent to the remote web server.
2. If not, check if it is listed in the forbidden list, and if present then the connection attempt is dropped.
3. If the packet does not match either of the above two items, it is sent to the remote web server.
4. Please be note that the domain only should be specified, not the full URL. For example to block traffic to [www.sex.com](http://www.sex.com), enter “sex” or “sex.com” instead of “www.sex.com”. In the example below, the URL request for [www.abc.com](http://www.abc.com) will be sent to the remote web server because it is listed in the trusted list, whilst the URL request for [www.sex](http://www.sex) or [www.sex.com](http://www.sex.com) will be dropped, because sex.com is in the forbidden list.

## Domains Filtering

### Domain Name

Domain Name	<input type="text" value="sex"/>
Type	Forbidden Domain
<input type="button" value="Apply"/> <div style="border: 1px solid black; padding: 2px; display: inline-block;">         Forbidden Domain          Trusted Domain       </div>	

### Trusted Domain

Name	Domain	
item1	abc	Delete

### Forbidden Domain

Name	Domain	
item0	sex	Delete

**Restrict URL Features:** This function enhances the restriction to your URL rules.

**Example:** Andy wishes to disable all WEB traffic except for ones listed in the trusted domain, which would prevent Bobby from accessing other web sites.

Andy selects both functions in the *Domain Filtering* and thinks that it will stop Bobby. But Bobby knows this function, *Domain Filtering*, ONLY disables all WEB traffic except for **Trusted Domain**, BUT not its **IP address**. If this is the situation, **Block surfing by IP address** function can be handy and helpful to Andy. Now, Andy can prevent Bobby from accessing other sites.

Ⓞ **Block Java Applet:** This function can block Web content that includes the Java Applet. It is to prevent someone who wants to damage your system via standard HTTP protocol.

Ⓞ **Block surfing by IP address:** Preventing someone who uses the IP address as URL for skipping **Domains Filtering** function. Activates only and if *Domain Filtering* enabled.

## Firewall Log

Firewall Log	
Event will be shown in the Status - Event Log	
Filtering Log	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Intrusion Log	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
URL Blocking Log	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Firewall Log display log information of any unexpected action with your firewall settings.

Check the **Enable** box to activate the logs.

Log information can be seen in the **Status – Event Log** after enabling.

### QoS (Quality of Service)

QoS function helps you to control your network traffic for each application from LAN (Ethernet and/or Wireless) to WAN (Internet). It facilitates you to control the different quality and speed of through put for each application when the system is running with full loading of upstream.

You can find three items under the **QoS** section: **Prioritization** and **Outbound / Inbound IP Throttling** (bandwidth management).

## Prioritization

There are three priority settings to be provided in the Router:

- High**
- Normal** (The default is normal priority for all of traffic without setting)
- Low**

And the balances of utilization for each priority are High (60%), Normal (30%) and Low (10%).

Prioritization							
Configuration (from LAN to WAN packet)							
Application	Time Schedule	Priority	Protocol	Source Port	Source IP Address Range (0.0.0.0' means Any)		DSCP Marking
				Destination Port	Destination IP Address Range (0.0.0.0' means Any)		
PPTP	Disabled	High	GRE	none	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled
	Always On	High	any	0 ~ 0	0.0.0.0	~0.0.0.0	Disabled

Click Clear

You can click **Clear** to delete the existing Application.

**Application:** A user-define description to identify this new policy/application.

**Time Schedule:** Scheduling your prioritization policy.

**Priority:** The priority given to each policy/application. Its default setting is set to High; you may adjust this setting to fit your policy/application.

**Protocol:** The name of supported protocol.

**Source Port:** The source port of packets to be monitored.

**Destination Port:** The destination port of packets to be monitored.

**Source IP Address Range:** The source IP address or range of packets to be monitored.

**Destination IP address Range:** The destination IP address or range of packets to be monitored.

**DSCP Marking:** Differentiated Services Code Point (DSCP), it is the first 6 bits in the ToS byte. DSCP Marking allows users to classify traffic based on DSCP value and send packets to next Router. See Table 4. Here is the DSCP Mapping Table:

Table 4: DSCP Mapping Table

<b>DSCP Mapping Table</b>	
<b>(Wireless) ADSL Router</b>	<b>Standard DSCP</b>
Disabled	None
Best Effort	Best Effort (000000)
Premium	Express Forwarding (101110)
Gold service (L)	Class 1, Gold (001010)
Gold service (M)	Class 1, Silver (001100)
Gold service (H)	Class 1, Bronze (001110)
Silver service (L)	Class 2, Gold (010010)
Silver service (M)	Class 2, Silver (010100)
Silver service (H)	Class 2, Bronze (010110)
Bronze service (L)	Class 3, Gold (011010)
Bronze service (M)	Class 3, Silver (011100)
Bronze service (H)	Class 3, Bronze (011110)

## Outbound IP Throttling (LAN to WAN)

IP Throttling allows you to limit the speed of IP traffic. The value entered will limit the speed of the application that you set to the specified value's multiple of 32kbps.

Outbound IP Throttling						
Configuration (from LAN to WAN packet)						
Application	Time Schedule	Protocol	Source Port	Source IP Address Range (0.0.0.0' means Any)		Rate Limit
			Destination Port	Destination IP Address Range (0.0.0.0' means Any)		
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~0.0.0.0	1 *32 (kbps)

Click Clear

You can click **Clear** to delete the existing Application.

**Application:** A user-define description to identify this new policy/application.

**Time Schedule:** Scheduling your prioritization policy. Refer to **Time Schedule** for more information.

**Protocol:** The name of supported protocol.

**Source Port:** The source port of packets to be monitored.

**Destination Port:** The destination port of packets to be monitored.

**Source IP Address Range:** The source IP address or range of packets to be monitored.

**Destination IP address Range:** The destination IP address or range of packets to be monitored.

**Outbound Rate Limit:** To limit the speed of outbound traffic

## Inbound IP Throttling (WAN to LAN)

IP Throttling allows you to limit the speed of IP traffic. The value entered will limit the speed of the application that you set to the specified value's multiple of 32kbps.

Inbound IP Throttling						
Configuration (from WAN to LAN packet)						
Application	Time Schedule	Protocol	Source Port	Source IP Address Range (0.0.0.0 means Any)		Rate Limit
			Destination Port	Destination IP Address Range (0.0.0.0 means Any)		
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)
<input type="text"/>	Always On	any	0 ~ 0	0.0.0.0	~ 0.0.0.0	1 *32 (kbps)

Click **Clear** You can click **Clear** to delete the existing Application.

**Application:** A user-define description to identify this new policy/application.

**Time Schedule:** Scheduling your prioritization policy. Refer to **Time Schedule** for more information.

**Protocol:** The name of supported protocol.

**Source Port:** The source port of packets to be monitored.

**Destination Port:** The destination port of packets to be monitored.

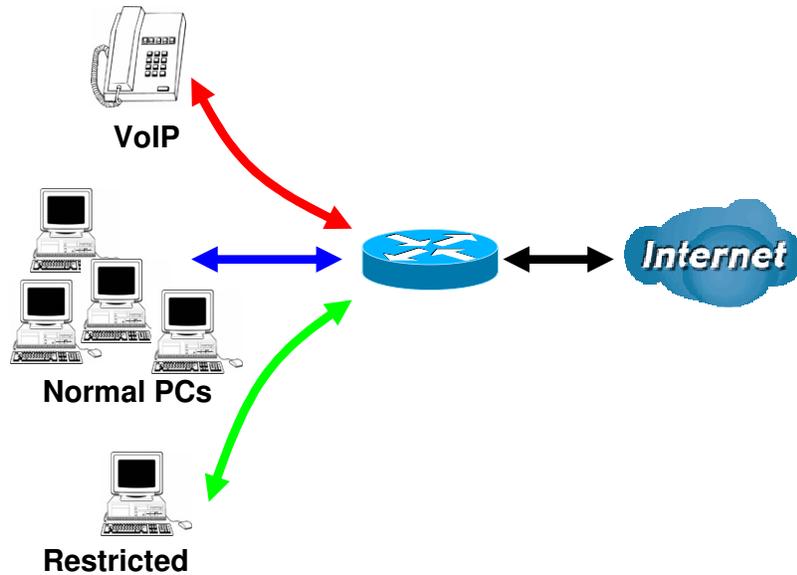

**Source IP Address Range:** The source IP address or range of packets to be monitored.

**Destination IP address Range:** The destination IP address or range of packets to be monitored.

**Inbound Rate Limit:** To limit the speed of for inbound traffic.

**Example: QoS for your Network**

**Connection Diagram**

**Information and Settings**

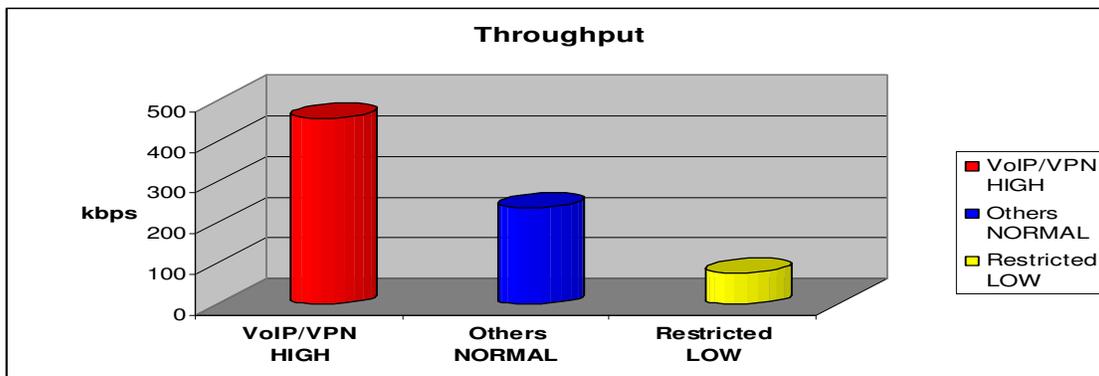

Upstream: 928 kbps  
Downstream: 8 Mbps

VoIP User : 192.168.1.1  
Normal Users : 192.168.1.2~192.168.1.5  
Restricted User: 192.168.1.100

**Prioritization**

Configuration (from LAN to WAN packet)

Application	Time Schedule	Priority	Protocol	Source Port	Source IP Address Range ('0.0.0.0' means Any)	Destination IP Address Range ('0.0.0.0' means Any)	DSCP Marking
				Destination Port	Destination IP Address Range ('0.0.0.0' means Any)		
PPTP	Always On	High	GRE	none	0.0.0.0 ~ 0.0.0.0	0.0.0.0 ~ 0.0.0.0	Gold service (L)
VoIP	Always On	High	any	0 ~ 0	192.168.1.1 ~ 192.168.1.1	0.0.0.0 ~ 0.0.0.0	Gold service (L)
Restricted	TimeSlot1	Low	any	0 ~ 0	192.168.1.100 ~ 192.168.1.100	0.0.0.0 ~ 0.0.0.0	Gold service (L)
				0 ~ 0	0.0.0.0 ~ 0.0.0.0	0.0.0.0 ~ 0.0.0.0	Gold service (L)

## Mission-critical application

Mostly the VPN connection is mission-critical application for doing data exchange between head and branch office.

PPTP	Always On ▾	High ▾	GRE	none	0.0.0.0 ~ 0.0.0.0	Gold service (L) ▾
				none	0.0.0.0 ~ 0.0.0.0	

The mission-critical application must be sent out smoothly without any dropping. Set priority as high level for preventing any other applications to saturate the bandwidth.

## Voice application

Voice is latency-sensitive application. Most VoIP devices are use SIP protocol and the port number will be assigned by SIP module automatically. Better to use fixed IP address for catching VoIP packets as high priority.

VoIP	Always On ▾	High ▾	any ▾	0 ~ 0	192.168.1.1 ~ 192.168.1.1	Gold service (L) ▾
				0 ~ 0	0.0.0.0 ~ 0.0.0.0	

Above settings will help to improve quality of your VoIP service when traffic is full loading.

## Restricted Application

Some of companies will setup FTP server for customer downloading or home user sharing their files by using FTP.

Restricted	TimeSlot1 ▾	Low ▾	any ▾	0 ~ 0	192.168.1.100 ~ 192.168.1.100	Gold service (L) ▾
				0 ~ 0	0.0.0.0 ~ 0.0.0.0	

With above settings that help to limit utilization of upstream of FTP. Time schedule also help you to only limit utilization at daytime.

With IP throttling you can specify more detail for allocating bandwidth; even the applications are located in the same level.

Upstream: 928kbps (29\*32kbps)  
 Mission-critical Application: 192kbps (6\*32kbps)  
 Voice Application: 128kbps (4\*32kbps)  
 Restricted Application: 160kbps (5\*32kbps)  
 Other Applications: 448kbps (14\*32kbps)

$6+4+14+5=29$ ,  $29*32\text{kbps}=928\text{kbps}$

Outbound IP Throttling						
Configuration (from LAN to WAN packet)						
Application	Time Schedule	Protocol	Source Port	Source IP Address Range (‘0.0.0.0’ means Any)	Rate Limit	
			Destination Port	Destination IP Address Range (‘0.0.0.0’ means Any)		
PPTP	Always On	gre	0 ~ 0	0.0.0.0 ~ 0.0.0.0	6	*32 (kbps)
			0 ~ 0	0.0.0.0 ~ 0.0.0.0		
VoIP	Always On	any	0 ~ 0	0.0.0.0 ~ 0.0.0.0	4	*32 (kbps)
			0 ~ 0	0.0.0.0 ~ 0.0.0.0		
Restricted	TimeSlot1	any	0 ~ 0	192.168.1.100 ~ 192.168.1.100	5	*32 (kbps)
			0 ~ 0	0.0.0.0 ~ 0.0.0.0		
Others	TimeSlot1	any	0 ~ 0	192.168.1.2 ~ 192.168.1.5	14	*32 (kbps)
			0 ~ 0	0.0.0.0 ~ 0.0.0.0		

Sometime your customers or friends may upload their files to your FTP server and that will saturate your downstream bandwidth. The settings below help you to limit bandwidth for the restricted application.

Inbound IP Throttling						
Configuration (from WAN to LAN packet)						
Application	Time Schedule	Protocol	Source Port	Source IP Address Range (‘0.0.0.0’ means Any)	Rate Limit	
			Destination Port	Destination IP Address Range (‘0.0.0.0’ means Any)		
Restricted	TimeSlot1	any	0 ~ 0	0.0.0.0 ~ 0.0.0.0	64	*32 (kbps)
			0 ~ 0	192.168.1.100 ~ 192.168.1.100		

## Virtual Server (“Port Forwarding”)

In TCP/IP and UDP networks a port is a 16-bit number used to identify which application program (usually a server) incoming connections should be delivered to. Some ports have numbers that are pre-assigned to them by the IANA (the Internet Assigned Numbers Authority), and these are referred to as “well-known ports”. Servers follow the well-known port assignments so clients can locate them.

If you wish to run a server on your network that can be accessed from the WAN (i.e. from other machines on the Internet that are outside your local network), or any application that can accept incoming connections (e.g. Peer-to-peer/P2P software such as instant messaging applications and P2P file-sharing applications) and are using NAT (Network Address Translation), then you will usually need to configure your router to forward these incoming connection attempts using specific ports to the PC on your network running the application. You will also need to use port forwarding if you want to host an online game server.

The reason for this is that when using NAT, your publicly accessible IP address will be used by and point to your router, which then needs to deliver all traffic to the private IP addresses used by your PCs. Please see the **WAN** configuration section of this manual for more information on NAT.

The device can be configured as a virtual server so that remote users accessing services such as Web or FTP services via the public (WAN) IP address can be automatically redirected to local servers in the LAN network. Depending on the requested service (TCP/UDP port number), the device redirects the external service request to the appropriate server within the LAN network

### Virtual Server (Port Forwarding)

[Add Virtual Server ▶](#)
[Edit DMZ Host ▶](#)
[Edit One-to-one NAT ▶](#)

#### Virtual Server Table

Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address		

## Add Virtual Server

Because NAT can act as a “natural” Internet firewall, your router protects your network from being accessed by outside users when using NAT, as all incoming connection attempts will point to your router unless you specifically create Virtual Server entries to forward those ports to a PC on your network.

When your router needs to allow outside users to access internal servers, e.g. a web server, FTP server, Email server or game server, the router can act as a “virtual server”. You can set up a local server with a specific port number for the service to use, e.g. web/HTTP (port 80), FTP (port 21), Telnet (port 23), SMTP (port 25), or POP3 (port 110), When an incoming access request to the router for a specified port is received, it will be forwarded to the corresponding internal server.

### Add Virtual Server in 'ipwan' IP Interface

#### Virtual Server Entry

Time Schedule	Always On ▼
Application <span style="color: #0070c0;">Helper ▶</span>	<input type="text"/>
Protocol	tcp ▼
External Port	from <input type="text" value="0"/> to <input type="text" value="0"/>
Redirect Port	from <input type="text" value="0"/> to <input type="text" value="0"/>
Internal IP Address <span style="color: #0070c0;">Candidates ▶</span>	<input type="text"/>

Apply
Return ▶

**Time Schedule:** A self-defined time period to enable your virtual server. You may specify a time schedule or Always on for the usage of this Virtual Server Entry. For setup and detail, refer to **Time Schedule** section

**Application:** Users-define description to identify this entry or click Helper ▶ to select existing predefined rules.

Helper ▶: 20 predefined rules are available. Click the Radio button to select the rule; Application, Protocol and External/Redirect Ports will be filled after the selection.

**Protocol:** It is the supported protocol for the virtual server. In addition to specifying the port number to be used, you will also need to specify the protocol used. The protocol used is determined by the particular application. Most applications will use TCP or UDP.

**External Port:** The Port number on the Remote/WAN side used when accessing the virtual server.

**Redirect Port:** The Port number used by the Local server in the LAN network.

**Internal IP Address:** The private IP in the LAN network, which will be providing the virtual server application. [Candidates](#) List all existing PCs connecting to the network. You may assign a PC with IP address and MAC from this list.

**Example:**

If you like to remote accessing your Router through the Web/HTTP at all time, you would need to enable port number 80 (Web/HTTP) and map to Router's IP Address. Then all incoming HTTP requests from you (Remote side) will be forwarded to the Router with IP address of 192.168.1.254. Since port number 80 has already been predefined, next to the **Application** click **Helper**. A list of predefined rules window will pop and select **HTTP\_Server**.

Application: *HTTP\_Server*  
 Time Schedule: *Always On*  
 Protocol: *tcp*  
 External Port: *80-80*  
 Redirect Port: *80-80*  
 IP Address: *192.168.1.254*

### Virtual Server (Port Forwarding)

[Add Virtual Server](#)

[Edit DMZ Host](#)

#### Virtual Server Table

Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address		
HTTP_Server	Always On	tcp	80 - 80	80 - 80	192.168.1.254	<a href="#">Edit</a>	<a href="#">Delete</a>

**Edit:** Click it to edit this virtual server application.

**Delete:** Click it to delete this virtual server application.

Using port forwarding does have security implications, as outside users will be able to connect to PCs on your network. For this reason you are advised to use specific Virtual Server entries just for the ports your application requires, instead of using DMZ. As doing so will result in all connections from the WAN attempt to access to your public IP of the DMZ PC specified.

**Attention**

If you have disabled the NAT option in the WAN-ISP section, the Virtual Server function will hence be invalid.

If the DHCP server option is enabled, you have to be very careful in assigning the IP addresses of the virtual servers in order to avoid conflicts. The easiest way of configuring Virtual Servers is to manually assign static IP address to each virtual server PC, with an address that does not fall into the range of IP addresses that are to be issued by the DHCP server. You can configure the virtual server IP address manually, but it must still be in the same subnet as the router.

## Edit DMZ Host

The DMZ Host is a local computer exposed to the Internet. When setting a particular internal IP address as the DMZ Host, all incoming packets will be checked by the Firewall and NAT algorithms then passed to the DMZ host, when a packet received does not use a port number used by any other Virtual Server entries.

**Caution:** This Local computer exposing to the Internet may face varies of security risks.

### Virtual Server (Port Forwarding)

Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address

### Edit DMZ Host

DMZ Host for 'ipwan' IP Interface

Enabled  Disabled

Internal IP Address
Candidates ▶

Apply
Return ▶

**Disabled:** As set in default setting, it disables the DMZ function.

**Enabled:** It activates your DMZ function.

**Internal IP Address:** Give a static IP address to the DMZ Host when **Enabled** radio button is checked. Be aware that this IP will be exposed to the WAN/Internet.

**Candidates ▶** Listed all existing PCs connecting to the network. You may assign a PC with IP address and MAC from this list.

Select the **Apply** button to apply your changes.

## Edit One-to-One NAT (Network Address Translation)

One-to-One NAT maps a specific private/local IP address to a global/public IP address.

If you have multiple public/WAN IP addresses from you ISP, you are eligible for One-to-One NAT to utilize these IP addresses.

Virtual Server (Port Forwarding)						
<a href="#">Add Virtual Server</a>		<a href="#">Edit DMZ Host</a>		<a href="#">Edit One-to-one NAT</a>		
Virtual Server Table						
Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address	
Global IP Pool in 'ipwan' IP interface						
Global Address Pool						
NAT Type	<input checked="" type="radio"/> Disable <input type="radio"/> Public to Private Subnet <input type="radio"/> Public to DMZ Zone					
Global IP Addresses	<input checked="" type="radio"/> Subnet	IP Address	<input type="text"/>	Netmask	<input type="text"/>	
	<input type="radio"/> IP Range	IP Address	<input type="text"/>	End IP	<input type="text"/>	
<input type="button" value="Apply"/> <input type="button" value="Return"/>						

One-to-one NAT Table <a href="#">Add Entry</a>						
Application	Time Schedule	Protocol	External Port	Redirect Port	IP Address	

**NAT Type:** Select desired NAT type. As set in default setting, it disables the One-to-One NAT function.

### Global IP Address:

**Subnet:** The subnet of the public/WAN IP address given by your ISP. If your ISP has provided this information, you may insert it here. Otherwise, use IP Range method.

**IP Range:** The IP address range of your public/WAN IP addresses. For example, IP: 192.168.1.1, end IP: 192.168.1.10

Select the **Apply** button to apply your changes.

Check [Add Entry](#) to create a new One-to-One NAT rule:

### Add Virtual Server in 'ipwan' IP interface

Virtual Server Entry	
Time Schedule	Always On ▾
Application <a href="#">Helper ▶</a>	<input type="text"/>
Protocol	tcp ▾
Global IP	<input type="text"/>
External Port	from <input type="text" value="0"/> to <input type="text" value="0"/>
Redirect Port	from <input type="text" value="0"/> to <input type="text" value="0"/>
Internal IP Address <a href="#">Candidates ▶</a>	<input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Return ▶"/>	

**Time Schedule:** A self-defined time period to enable your virtual server. You may specify a time schedule or Always on for the usage of this Virtual Server Entry. For setup and detail, refer to **Time Schedule** section

**Application:** Users-defined description to identify this entry or click [Helper ▶](#) to select existing predefined rules.

[Helper ▶](#): 20 predefined rules are available. Click the Radio button to select the rule; Application, Protocol and External/Redirect Ports will be filled after the selection.

**Protocol:** It is the supported protocol for the virtual server. In addition to specifying the port number to be used, you will also need to specify the protocol used. The protocol used is determined by the particular application. Most applications will use TCP or UDP;

**Global IP:** Define a public/ WAN IP address for this Application to use. This Global IP address must be defined in the **Global IP Address**.

**External Port:** The Port number on the Remote/WAN side used when accessing the virtual server.

**Redirect Port:** The Port number used by the Local server in the LAN network.

**Internal IP Address:** The private IP in the LAN network, which will be providing the virtual server application. [Candidates ▶](#) List all existing PCs connecting to the network. You may assign a PC with IP address and MAC from this list.

Select the **Apply** button to apply your changes.

**Example: List of some well-known and registered port numbers.**

The Internet Assigned Numbers Authority (IANA) is the central coordinator for the assignment of unique parameter values for Internet protocols. Port numbers range from 0 to 65535, but only ports numbers 0 to 1023 are reserved for privileged services and are designated as “well-known ports” (Please refer to Table 5). The registered ports are numbered from 1024 through 49151. The remaining ports, referred to as dynamic or private ports, are numbered from 49152 through 65535.

For further information, please see IANA’s website at: <http://www.iana.org/assignments/port-numbers>

**Table 5: Well-known and registered Ports**

Port Number	Protocol	Description
20	TCP	FTP Data
21	TCP	FTP Control
22	TCP & UDP	SSH Remote Login Protocol
23	TCP	Telnet
25	TCP	SMTP (Simple Mail Transfer Protocol)
53	TCP & UDP	DNS (Domain Name Server)
69	UDP	TFTP (Trivial File Transfer Protocol)
80	TCP	World Wide Web HTTP
110	TCP	POP3 (Post Office Protocol Version 3)
119	TCP	NEWS (Network News Transfer Protocol)
123	UDP	NTP (Network Time Protocol)
161	TCP	SNMP
443	TCP & UDP	HTTPS
1503	TCP	T.120
1720	TCP	H.323
4000	TCP	ICQ
7070	UDP	RealAudio

## Time Schedule

The Time Schedule supports up to 16 time slots which helps you to manage your Internet connection. In each time profile, you may schedule specific day(s) i.e. Monday through Sunday to restrict or allowing the usage of the Internet by users or applications.

This Time Schedule correlates closely with router's time, since router does not have a real time clock on board; it uses the Simple Network Time Protocol (SNTP) to get the current time from an SNTP server from the Internet. Refer to **Time Zone** for details. Your router time should correspond with your local time. If the time is not set correctly, your Time Schedule will not function properly.

Time Schedule						
Time Slot						
ID	Name	Day in a week	Start Time	End Time		
1	TimeSlot1	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
2	TimeSlot2	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
3	TimeSlot3	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
4	TimeSlot4	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
5	TimeSlot5	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
6	TimeSlot6	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
7	TimeSlot7	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
8	TimeSlot8	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
9	TimeSlot9	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
10	TimeSlot10	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
11	TimeSlot11	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
12	TimeSlot12	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
13	TimeSlot13	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
14	TimeSlot14	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
15	TimeSlot15	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
16	TimeSlot16	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>

## Configuration of Time Schedule

### Edit a Time Slot

1. Choose any Time Slot (ID 1 to ID 16) to edit, click **Edit**.

Time Schedule						
Time Slot						
ID	Name	Day in a week	Start Time	End Time		
1	TimeSlot1	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>
2	TimeSlot2	sMTWTFs	08 : 00	18 : 00	<a href="#">Edit</a>	<a href="#">Clear</a>

Click Edit

**Note:** Watch it carefully, the days you have selected will present in capital letter. Lower case letter shows the day(s) is not selected, and no rule will apply on this day(s).

2. A detailed setting of this Time Slot will be shown.

Time Schedule	
Edit Time Slot	
ID	1
Name	<input type="text" value="TimeSlot1"/>
Day	<input type="checkbox"/> Sun. <input checked="" type="checkbox"/> Mon. <input checked="" type="checkbox"/> Tue <input checked="" type="checkbox"/> Wed <input checked="" type="checkbox"/> Thu <input checked="" type="checkbox"/> Fri. <input type="checkbox"/> Sat.
Start Time	08 : 00
End Time	18 : 00
<input type="button" value="Apply"/>	

**ID:** This is the index of the time slot.

**Name:** A user-define description to identify this time portfolio.

**Day:** The default is set from Monday through Friday. You may specify the days for the schedule to be applied.

**Start Time:** The default is set at 8:00 AM. You may specify the start time of the schedule.

**End Time:** The default is set at 18:00 (6:00PM). You may specify the end time of the schedule.

Select the **Apply** button to apply your changes.

### Delete a Time Slot

Click **Clear** to delete the existing Time profile, i.e. erase the Day and back to default setting of Start Time / End Time.

## Advanced

Configuration options within the **Advanced** section are for users who wish to take advantage of the more advanced features of the router. Users who do not understand the features should not attempt to reconfigure their router, unless advised to do so by support staff.

There are four items within the **Advanced** section: [Static Route](#), [Dynamic DNS](#), [Check Email](#), [Device Management](#), [IGMP](#) and [VLAN Bridge](#).

### Static Routing

Click on **Routing Table** and then choose **Create Route** add a routing table.

Static Route			
<b>Create</b>			
Destination	<input type="text"/>		
Netmask	<input type="text"/>		
via Gateway	<input type="text"/>	or Interface	<input type="text" value="v"/>
Cost	<input type="text" value="1"/>		
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>			

**Destination:** This is the destination subnet IP address.

**Netmask:** Subnet mask of the destination IP addresses based on above destination subnet IP.

**Gateway:** This is the gateway IP address to which packets are to be forwarded.

**Interface:** Select the interface through which packets are to be forwarded.

**Cost:** This is the same meaning as Hop. This should usually be left at 1.

## Dynamic DNS

Dynamic DNS	
Parameters	
Dynamic DNS	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Dynamic DNS Server	www.dyndns.org (dynamic) ▼
Domain Name	<input type="text"/>
Username	<input type="text"/>
Password	<input type="text"/>
Period	25 <input type="text"/> Day(s) ▼
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

The Dynamic DNS function allows you to alias a dynamic IP address to a static hostname, allowing users whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your ADSL connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP.

You will first need to register and establish an account with the Dynamic DNS provider using their website, for example <http://www.dyndns.org/>

There are more than 5 DDNS services supported.

**Disable:** Check to disable the Dynamic DNS function.

**Enable:** Check to enable the Dynamic DNS function. The following fields will be activated and required:

**Dynamic DNS Server:** Select the DDNS service you have established an account with.

**Domain Name, Username and Password:** Enter your registered domain name and your username and password for this service.

**Period:** Set the time period between updates, for the Router to exchange information with the DDNS server. In addition to updating periodically as per your settings, the router will perform an update when your dynamic IP address changes.

**Via WAN Interface:** Decide which WAN interface you want to use for sending DDNS request.

## Check Emails

Check Email	
Parameters	
Check Email	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Account Name	<input type="text"/>
Password	<input type="text"/>
POP3 Mail Server	<input type="text"/>
Period	<input type="text" value="60"/> minutes
Dial-out for Checking Emails	<input type="checkbox"/> Automatic
<input type="button" value="Apply"/>	

This function allows you to have the router check your POP3 mailbox for new Email messages. The **Mail** LED on your router will light when it detects new messages waiting for download. You may also view the status of this function using the **Status – Email Checking** section of the web interface, which also provides details on the number of new messages waiting. See the **Status** section of this manual for more information.

**Disable:** Check to disable the router's Email checking function.

**Enable:** Check to enable the routers Emailing checking function. The following fields will be activated and required:

**Account Name:** Enter the name (login) of the POP3 account you wish to check.. Normally, it is the text in your email address before the "@" symbol. If you have trouble with it, please contact your ISP.

**Password:** Enter the account's password.

**POP3 Mail Server:** Enter your (POP) mail server name. Your Internet Service Provider (ISP) or network administrator will be able to supply you with this.

**Interval:** Enter the value in minutes between periodic mail checks.

**Automatically dial-out for checking emails:** When the function is enabled, your ADSL router will connect to your ISP automatically to check emails if your Internet connection dropped. Please be careful when using this feature if your ADSL service is charged by time online.

## Device Management

The Device Management advanced configuration settings allow you to control your router's security options and device monitoring features.

Device Management			
<b>Device Host Name</b>			
Host Name	<input type="text" value="home.gateway"/>		
<b>Embedded Web Server</b>			
* HTTP Port	<input type="text" value="80"/>	(80 is default HTTP port)	
Management IP Address	<input type="text" value="0.0.0.0"/>	(0.0.0.0 means Any)	
Expire to auto-logout	<input type="text" value="180"/>	seconds	
<b>Universal Plug and Play (UPnP)</b>			
UPnP	<input checked="" type="radio"/> Enable <input type="radio"/> Disable		
* UPnP Port	<input type="text" value="2800"/>		
<b>SNMP Access Control</b>			
<b>SNMP V1 and V2</b>			
Read Community	<input type="text" value="public"/>	IP Address	<input type="text" value="0.0.0.0"/>
Write Community	<input type="text" value="password"/>	IP Address	<input type="text" value="0.0.0.0"/>
Trap Community	<input type="text"/>	IP Address	<input type="text"/>
<b>SNMP V3</b>			
Username	<input type="text"/>	Password	<input type="text"/>
Access Right	<input checked="" type="radio"/> Read <input type="radio"/> Read/Write	IP Address	<input type="text"/>
* : This setting will become effective after you save to flash and restart the router.			
<input type="button" value="Apply"/>			

### Embedded Web Server

**HTTP Port:** This is the port number the router's embedded web server (for web-based configuration) will use. The default value is the standard HTTP port, 80. Users may specify an alternative if, for example, they are running a web server on a PC within their LAN.

**Management IP Address:** You may specify an IP address allowed to logon and access the router's web server. Setting the IP address to 0.0.0.0 will disable IP address restrictions, allowing users to login from any IP address.

**Expire to auto-logout:** Specify a time frame for the system to auto-logout the user's configuration session.

**For Example:** User A changes HTTP port number to **100**, specifies their own IP address of **192.168.1.55**, and sets the logout time to be **100** seconds. The router will only allow User A access from the IP address **192.168.1.55** to logon to the Web GUI by typing: <http://192.168.1.254:100> in their web browser. After 100 seconds, the device will automatically logout User A.

**Universal Plug and Play (UPnP)**

UPnP offers peer-to-peer network connectivity for PCs and other network devices, along with control and data transfer between devices. UPnP offers many advantages for users running NAT routers through UPnP NAT Traversal, and on supported systems makes tasks such as port forwarding much easier by letting the application control the required settings, removing the need for the user to control advanced configuration of their device.

Both the user's Operating System and the relevant application must support UPnP in addition to the router. Windows XP and Windows Me natively support UPnP (when the component is installed), and Windows 98 users may install the Internet Connection Sharing client from Windows XP in order to support UPnP. Windows 2000 does not support UPnP.

**⓪ Disable:** Check to disable the router's UPnP functionality.

**⓪ Enable:** Check to enable the router's UPnP functionality.

**UPnP Port:** Its default setting is 2800. It is highly recommended for users to use this port value. If this value conflicts with other ports already being used you may wish to change the port.

**SNMP Access Control** (Software on a PC within the LAN is required in order to utilize this function) – Simple Network Management Protocol.

**SNMP V1 and V2:**

**Read Community:** Specify a name to be identified as the Read Community, and an IP address. This community string will be checked against the string entered in the configuration file. Once the string name is matched, user obtains this IP address will be able to view the data.

**Write Community:** Specify a name to be identified as the Write Community, and an IP address. This community string will be checked against the string entered in the configuration file. Once the string name is matched, users from this IP address will be able to view and modify the data.

**Trap Community:** Specify a name to be identified as the Trap Community, and an IP address. This community string will be checked against the string entered in the configuration file. Once the string name is matched, users from this IP address will be sent SNMP Traps.

**SNMP V3:**

Specify a name and password for authentication. And define the access right from identified IP address. Once the authentication has succeeded, users from this IP address will be able to view and modify the data.

**SNMP Version: SNMPv2c and SNMPv3**

SNMPv2c is the combination of the enhanced protocol features of SNMPv2 without the SNMPv2 security. The "c" comes from the fact that SNMPv2c uses the SNMPv1 community string paradigm for "security", but is widely accepted as the SNMPv2 standard.

SNMPv3 is a strong authentication mechanism, authorization with fine granularity for remote monitoring.

Traps supported: Cold Start, Authentication Failure.

The following MIBs are supported:

- **From RFC 1213 (MIB-II):**
  - System group
  - Interfaces group
  - Address Translation group
  - IP group
  - ICMP group
  - TCP group
  - UDP group
  - EGP (not applicable)
  - Transmission
  - SNMP group
  
- **From RFC 1650 (EtherLike-MIB):**
  - dot3Stats
  
- **From RFC 1493 (Bridge MIB):**
  - dot1dBase group
  - dot1dTp group
  - dot1dStp group (if configured as spanning tree)
  
- **From RFC 1471 (PPP/LCP MIB):**
  - pppLink group
  - pppLqr group
  
- **From RFC 1472 (PPP/Security MIB):**
  - PPP Security Group)
  
- **From RFC 1473 (PPP/IP MIB):**
  - PPP IP Group

➤ **From RFC 1474 (PPP/Bridge MIB):**

PPP Bridge Group

➤ **From RFC 1573 (IfMIB):**

ifMIBObjects Group

➤ **From RFC 1695 (atmMIB):**

atmMIBObjects

➤ **From RFC 1907 (SNMPv2):**

only snmpSetSerialNo OID

## IGMP

IGMP, known as *Internet Group Management Protocol*, is used to management hosts from multicast group.

IGMP	
Parameters	
IGMP Forwarding	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
IGMP Snooping	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
<input type="button" value="Apply"/>	

**IGMP Forwarding:** Accepting multicast packet. Default is set to **Enable**.

**IGMP Snooping:** Allowing switched Ethernet to check and make correct forwarding decisions. Default is set to **Enable**

## VLAN Bridge

This section allows you to create VLAN group and specify the member.

VLAN Bridge					
Parameters					
Name	VLAN ID	Tagged Ports	Untagged Ports	Edit	Delete
DefaultVlan	1	None	ethernet,wireless,wireless_wds,	<a href="#">Edit</a>	
<a href="#">Create VLAN</a>					

**Edit:** Edit your member ports in selected VLAN group.

**Create VLAN:** To create another VLAN group.

### Advanced VLAN Setup Example (Triply Play)

#### **VLAN\_data:**

Ethernet Port 1, Wireless and Wireless WDS are reserving for Internet  
 - On Ethernet port 1 I also need VC 0/40 bridged.

#### **VLAN\_Vedio**

Ethernet ports: 2, 3 and 4:  
 - 0/33 Bi-directional IP  
 - 0/34 Video  
 - 0/35 Video  
 - 0/36 Video Subscriber Services (EPG, EAS, etc.)  
 - 0/37 Video  
 - 0/38 Video  
 - 0/39 Spare

#### **Step 1: Setup Member Ports**

Go to **Configuration → LAN → Bridge Interface**.

You can setup member ports for each VLAN group under Bridge Interface section. From the example, two VLAN groups need to be created.

Ethernet: P1 (Port 1)

Ethernet1: P2, P3 and P4 (Port 2, 3, 4) Please uncheck P2, P3, P4 from Ethernet VLAN Port first.

**Note:** You should setup each VLAN group with caution. Each Bridge Interface is arranged in this order.

Bridge Interface	VLAN Port (Always starts with)
Ethernet	P1 / P2 / P3 / P4
Ethernet1	P2 / P3 / P4
Ethernet2	P3 / P4
Ethernet3	P4

### Bridge Interface

**Parameters**

Bridge Interface	VLAN Port
Ethernet	<input checked="" type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4
Ethernet1	<input type="checkbox"/> P1 <input checked="" type="checkbox"/> P2 <input checked="" type="checkbox"/> P3 <input checked="" type="checkbox"/> P4
Ethernet2	<input type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4
Ethernet3	<input type="checkbox"/> P1 <input type="checkbox"/> P2 <input type="checkbox"/> P3 <input type="checkbox"/> P4

**Device Management**

Management Interface	Ethernet
----------------------	----------

## Step 2: Create WAN Interface

Go to **Configuration → WAN → ISP**

**wanlink** is the factory default WAN interface which in service for data/internet access. If your ISP uses this access protocol, click **Edit** to input other parameters if needed. If your ISP does not use PPPoE, you can change the default WAN connection entry by clicking **Change**.

From the example, 0/40 is used for data/internet and assumes PPPoE is used; click the **Edit** to change the VPI/VCI to 0/40.

Click **Create** to setup up additional WAN interface for video applications. Total of 8 VLAN is support; therefore, only 8 WAN interfaces can be created in the table.

### WAN Connection

**WAN Services Table**

Name	Description	Creator	VPI	VCI		
wanlink	PPPoE WAN Link	QuickStart	0	40	<a href="#">Edit </a>	<a href="#">Change </a>

[Create](#)

From the example, PVC 0/33 to 0/39 is assigned for video using 1483 Bridged mode. Check **RFC 1483 Bridged** and click **Next** to continue the setup.

### ISP

Please select the type of service you wish to create

ATM	<input type="radio"/> RFC 1483 Routed	<input checked="" type="radio"/> RFC 1483 Bridged
	<input type="radio"/> PPPoA Routed	<input type="radio"/> IPoA Routed
	<input type="radio"/> PPPoE Routed	<a href="#">Quick Start </a>

Spaces next to VPI and VCI, type 0 and 33 in respectively. Select appropriate ATM Class, Encapsulation Method, Acceptable Frame Type, Filter Type and PVID for Untagged Frames.

WAN Connection	
RFC 1483 Bridged	
Description	RFC 1483 bridged mode
VPI	0
VCI	34
ATM Class	UBR
Encapsulation Method	LLC Bridged
Acceptable Frame Type	ALL
Filter Type	All
PVID for Untagged Frames	1
<input type="button" value="Apply"/>	

**VPI and VCI:** Enter the information provided by your ISP.

**ATM Class:** The Quality of Service for ATM layer.

**Encapsulation method:** Select the encapsulation format, this is provided by your ISP.

**Acceptable Frame Type:** Specify what kind of traffic can through this connection, all traffic or only VLAN tagged.

**Filter Type:** Specify the type of ethernet filtering performed by the named bridge interface.

<b>All</b>	Allows all types of ethernet packets through the port.
<b>Ip</b>	Allows only IP/ARP types of ethernet packets through the port.
<b>Pppoe</b>	Allows only PPPoE types of ethernet packets through the port.

**PVID for Untagged Frames:** PVID is known as Port VLAN Identifier. When an untagged packet is received by input port(s), this packet will be tagged with specified PVID.

From the example, VPI and VCI only section need to be filled-in and just leave the rest as is. Repeat the same procedure by clicking **Create** → select **RFC1483 Bridged** → fill-in the rest of PVC 0/34 to 0/39.

WAN Connection						
WAN Services Table						
Name	Description	Creator	VPI	VCI		
wanlink	PPPoE WAN Link	QuickStart	0	40	<a href="#">Edit</a>	<a href="#">Change</a>
rfc1483-0	RFC 1483 bridged mode	WebAdmin	0	33	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-1	RFC 1483 bridged mode	WebAdmin	0	34	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-2	RFC 1483 bridged mode	WebAdmin	0	35	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-3	RFC 1483 bridged mode	WebAdmin	0	36	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-4	RFC 1483 bridged mode	WebAdmin	0	37	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-5	RFC 1483 bridged mode	WebAdmin	0	38	<a href="#">Edit</a>	<a href="#">Delete</a>
rfc1483-6	RFC 1483 bridged mode	WebAdmin	0	39	<a href="#">Edit</a>	<a href="#">Delete</a>

### Step 3: Setup VLAN Service

Go to **Configuration → Advanced → VLAN Bridge**

**DefaultVlan** lists all member ports. It is necessary to group specific member ports for each VLAN. From the example, two VLAN groups are requested: Data and Video.

To create another VLAN group for Video by clicking **Create VLAN**.

VLAN Bridge					
Parameters					
Name	VLAN ID	Tagged Ports	Untagged Ports	Edit	Delete
DefaultVlan	1	None	ethernet,wireless,wireless_wds,ethernet1,rfc1483-0,rfc1483-1,rfc1483-2,rfc1483-3,rfc1483-4,rfc1483-5,rfc1483-6,	<a href="#">Edit</a>	
<a href="#">Create VLAN</a>					

Given a name and ID (PVID) to identify the Video group. The valid value range for PVID is 1 ~ 4094.

From the example:

VLAN untagged ports for Data/Internet: ethernet, wireless and wireless\_wds.

VLAN untagged ports for Video: ethernet1, rfc-1483-0 ~ rfc-1483-6.

Click **Apply** to made change effective immediately.

Create VLAN	
Parameters	
VLAN Name	<input type="text" value="Video_VLAN"/> <input type="text" value="2"/> (2~4094)
Tagged Member Port(s)	<input type="checkbox"/> ethernet <input type="checkbox"/> wireless <input type="checkbox"/> wireless_wds <input type="checkbox"/> ethernet1 <input type="checkbox"/> rfc1483-0 <input type="checkbox"/> rfc1483-1 <input type="checkbox"/> rfc1483-2 <input type="checkbox"/> rfc1483-3 <input type="checkbox"/> rfc1483-4 <input type="checkbox"/> rfc1483-5 <input type="checkbox"/> rfc1483-6
Untagged Member Port(s)	<input type="checkbox"/> ethernet <input type="checkbox"/> wireless <input type="checkbox"/> wireless_wds <input checked="" type="checkbox"/> ethernet1 <input checked="" type="checkbox"/> rfc1483-0 <input checked="" type="checkbox"/> rfc1483-1 <input checked="" type="checkbox"/> rfc1483-2 <input checked="" type="checkbox"/> rfc1483-3 <input checked="" type="checkbox"/> rfc1483-4 <input checked="" type="checkbox"/> rfc1483-5 <input checked="" type="checkbox"/> rfc1483-6
<input type="button" value="Apply"/> <input type="button" value="Cancel"/> <input type="button" value="Return"/>	

VLAN Bridge					
Parameters					
Name	VLAN ID	Tagged Ports	Untagged Ports	Edit	Delete
DefaultVlan	1	None	ethernet,wireless,wireless_wds,	<a href="#">Edit</a>	
Video_VLAN	2	None	ethernet1,rfc1483-0,rfc1483-1,rfc1483-2,rfc1483-3,rfc1483-4,rfc1483-5,rfc1483-6,	<a href="#">Edit</a>	<a href="#">Delete</a>
<a href="#">Create VLAN</a>					

Mapping the **VLAN Bridge** with **Bridge Interface** created in Step1, you will see the conformable relationship in these two screenshots.

#### Step 4: IGMP Snooping Enable

Go **Configuration → Advanced → IGMP**.

IGMP Snooping must be enabled in order to allow video stream forwarding correctly.

IGMP	
Parameters	
IGMP Forwarding	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
IGMP Snooping	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
<input type="button" value="Apply"/>	

## Save Configuration to Flash

After changing the router's configuration settings, you must save all of the configuration parameters to FLASH to avoid them being lost after turning off or resetting your router. Click **Save** to write your new configuration to FLASH.

### Save Config to FLASH

Please confirm that you wish to save the configuration.

*There will be a delay while saving as configuration information is written to FLASH chips.*

Apply

## Logout

To exit the router's web interface, choose **Logout**. Please ensure that you have saved the configuration settings before you logout.

Be aware that the router is restricted to only one PC accessing the configuration web pages at a time. Once a PC has logged into the web interface, other PCs cannot get access until the current PC has logged out of the web interface. If the previous PC forgets to logout, the second PC can access the page after a user-defined period, by default 3 minutes. You can modify this value using the **Advanced – Device Management** section of the web interface. Please see the **Advanced** section of this manual for more information.

## **Chapter 5: Troubleshooting**

If the router is not functioning properly, first check this chapter for simple troubleshooting before contacting your service provider.

### **Problems starting up the router**

<b><u>Problem</u></b>	<b><u>Corrective Action</u></b>
<b>None of the LEDs are on when you turn on the router.</b>	Check the connection between the adapter and the router. If the error persists, you may have a hardware problem. In this case you should contact technical support.
<b>You have forgotten your router login and/or password.</b>	Try the default login and password, please refers to Chapter 3. If this fails, you can restore your router to its factory settings by holding the Reset button on the back of your router for 6 seconds above.

### **Problems with the WAN Interface**

<b><u>Problem</u></b>	<b><u>Corrective Action</u></b>
<b>Initialization of the PVC connection (“linesync”) failed.</b>	Ensure that the telephone cable is connected properly from the ADSL port to the wall jack. The ADSL LED on the front panel of the router should be on. Check that your VPI, VCI, encapsulation type and type of multiplexing settings are the same as those provided by your ISP. Reboot the router GE. If you still have problems, you may need to verify these settings with your ISP.
<b>Frequent loss of ADSL linesync (disconnections).</b>	Ensure that all other devices connected to the same telephone line as your router (e.g. telephones, fax machines, analogue modems) have a line filter connected between them and the wall socket (unless you are using a Central Splitter or Central Filter installed by a qualified and licensed electrician), and ensure that all line filters are correctly installed and the right way around. Missing line filters or line filters installed the wrong way around can cause problems with your ADSL connection, including causing frequent disconnections.

**Problems with the LAN Interface**

<u>Problem</u>	<u>Corrective Action</u>
<b>Can't ping any PCs on the LAN.</b>	Check the Ethernet LEDs on the front panel. The LED should be on for a port that has a PC connected. If it is off, check the cables between your router and the PC. Make sure you have uninstalled any software firewall for troubleshooting.
	Verify that the IP address and the subnet mask are consistent between the router and the workstations.

## **APPENDIX A: Product Support and Contact Information**

Most problems can be solved by refer to the **Troubleshooting** section in the User's Manual. If you cannot resolve the problem with the **Troubleshooting** chapter, please contact the dealer where you purchased this product.

At PROLiNK, we are committed to give you the best products as well as the best technical support for your product. If there is any virus in your system, we can provide suggestions like where you can find a solution to remove the virus, but we would be unable to assist you until the virus is eradicated
