

Accuratus 730 POS/Rack Keyboard

Part Code: KYBAC730W-PS2HY

About

The Accuratus 730 from Ceratech at only 34mm deep is one of the thinnest keyboards available today.

Unusually for a board of this depth the 730 features full travel keys which means it performs just like a desktop keyboard.

It's ideally suited for POS, Rack mounting or applications where a separate mouse is inconvenient. The 730 is also ideal for educational or internet café situations because there are no moving parts (mouse ball etc) to remove (a favourite pastime with many students). The 730 incorporates a touch pad thus combining everything in the one footprint.

All key characters are laser etched providing good durability.

Strong tactile feedback is assured due to its membrane technology.

Accuratus 730: Thin alternative to the Accuratus 540
