When you connect the ASD-51N to a home network, you can enjoy listening to music files stored on your PC, internet radio audio and other sources. You can also control the ASD-51N from your iPod touch via the Web browser.

Required system

❑ Broadband Internet connection

A broadband line connection to the Internet is required in order to use the ASD-51N's Internet radio function and firmware update.

❑ Modem

This is a device that is connected to the broadband line to communicate with the Internet. Some are integrated with the router.

❑ Router

- When using the ASD-51N, we recommend you use a router equipped with the following functions:
 - Built-in DHCP (Dynamic Host Configuration Protocol) server
This function automatically assigns IP addresses on the LAN.
 - Built-in 100BASE-TX switch
When connecting multiple devices, we recommend a switching hub with a speed of 100 Mbps or greater.

❑ Ethernet cable (CAT-5 or greater recommended)

- The ASD-51N does not come with an Ethernet cable.
- For Ethernet cable, we recommend that you use shielded normal type cable. If you use flat type or a non-shielded cable, the noise may adversely affect other devices.

Computer

A computer with the following specifications is required to use a music server:

- OS
Windows® XP Service Pack2 or later, Windows Vista
- Software (Prepare one of the following.)
 - Windows Media Player ver.11
 - DLNA-compatible server software
- Internet browser
Microsoft Internet Explorer 6 or later
- LAN port
- 300 MB or more free disk space

※ Free disk space is required to store music and video files. The following sizes are approximate.

Format	Bit rate	Per minute	Per hour
MP3 / WMA MPEG-4 AAC	128 kbps	Approx. 1 MB	Approx. 60 MB
	192 kbps	Approx. 1.5 MB	Approx. 90 MB
	256 kbps	Approx. 2 MB	Approx. 120 MB
	392 kbps	Approx. 3 MB	Approx. 180 MB
WAV (LPCM)	1400 kbps	Approx. 10 MB	Approx. 600 MB
FLAC	1080 kbps	Approx. 7.7 MB	Approx. 464 MB

For connections to the Internet, contact an ISP (Internet Service Provider) or a computer shop.

NOTE

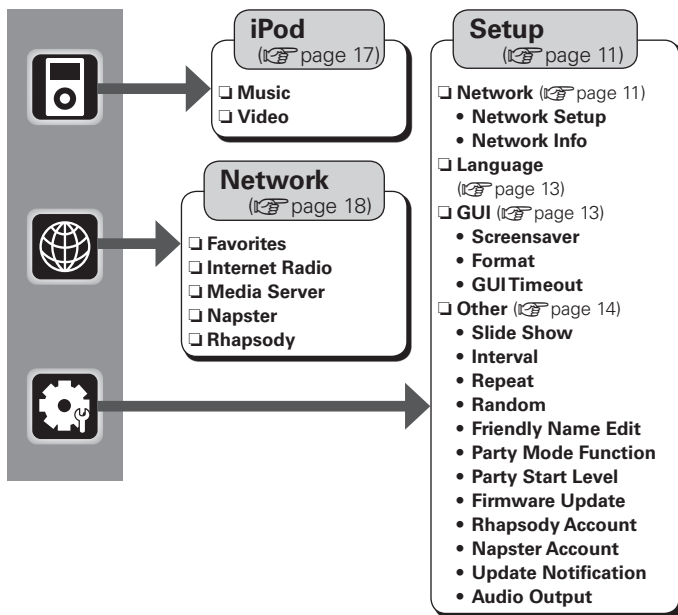

- A contract with an ISP is required to connect to the Internet.
No additional contract is needed if you already have a broadband connection to the Internet.
- The types of routers that can be used depend on the ISP. Contact an ISP or a computer shop for details.
- Depending on the server, video files may be displayed, but they cannot be played on the ASD-51N.

Others

- If you have an Internet provider contract for a line on which network settings are made manually, make the settings at GUI menu "Setup" – "Network" – "Network Setup" (☞ page 11).
- With the ASD-51N, it is possible to use the DHCP and Auto IP functions to make the network settings automatically.
- When using a broadband router (DHCP function), the ASD-51N sets the IP address, etc., automatically.
When using the ASD-51N connected to a network with no DHCP function, make the settings for the IP address, etc., at GUI menu "Setup" – "Network" – "Network Setup" (☞ page 11).
- The ASD-51N is not compatible with PPPoE. A PPPoE-compatible router is required if you have a contract for a line of the type with which the PPPoE is set.
- Depending on the ISP with which you have your contract, it may be necessary to make proxy server settings to use the Internet radio function. If you made proxy server settings on the computer to connect to the Internet, make the proxy server settings on the ASD-51N in the same way.

Playing Network Audio

This procedure can be used to play Internet radio stations or music or still picture (JPEG) files stored on a computer.

About the Internet Radio Function

• Internet radio refers to radio broadcasts distributed over the Internet. Internet radio stations from around the world can be tuned in.

The ASD-51N is equipped with the following Internet radio functions:

- Stations can be selected by genre and region.
- Internet radio stations in MP3 and WMA (Windows Media Audio) format can be listened to.
- Your favorite radio stations can be registered by accessing an exclusive DENON Internet radio URL from a Web browser on a computer.
 - ※ The function is managed for individual users, so you must provide your MAC or e-mail address.
Exclusive URL: <http://www.radiodenon.com>
- The ASD-51N's Internet radio station list is created using a radio station database service (vTuner). This database service provides a list edited and created for the ASD-51N.
 - ※ The radio station database service may be suspended without notice.

Media Player

This function lets you play music files and playlists (m3u, wpl) stored on a computer (Media server) connected to the ASD-51N via a network.

With the ASD-51N's network audio playback function, connection to the server is possible using one of the technologies below.

- Windows Media Player Network Sharing Service
- Windows Media DRM10

 See overleaf

Playing Network Audio

 Album art function

When a WMA (Windows Media Audio), MP3 or MPEG-4 AAC file includes album art data, the album art can be displayed while the music files are playing.

 For music files in WMA (Windows Media Audio) format, the album art is only played when using Windows Media Player ver. 11.

 Slide show function

Still picture (JPEG) files stored in folders on a music server can be played as slide shows.

The time for which each picture is displayed can be set.

 When still picture (JPEG) files are played on the ASD-51N, they are played in the direction in which they are stored in the folder, so store in them in the direction in which you want them to play.

Installing Windows Media Player ver. 11

- ① If Windows XP Service Pack 2 has not yet been installed, either download it free of charge from Microsoft or install it via a Windows update installer.
