XIV Converting a Video File

AVI is one of the most popular video formats being used today for portable media players. It is also very commonly used for video available on the internet. It adopts

XviD/DivX format to code the video file. The quality of this type of video file is good and the size of the video file is small.

This AVI converter supports converting AVI, MPG, MPEG, RM, RMVB, WMV, DAT, MP4, ASF, MKV, VOB formats to AVI format in high speed and high quality.

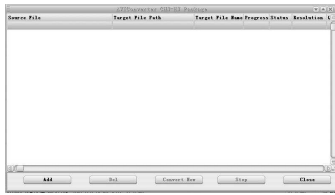

System requirements:

- The Converter software needs the basic configuration as follows:

CPU : Intel or AMD processor , Intel Pentium 3 or above , including Intel Celeron series

Operation steps:

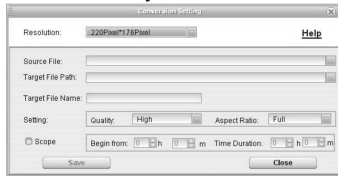

1. Insert the CD that came with this player into your CD Drive and look for a file or folder called “**AVIConverter Vista Compatible Setup Package.exe**”
2. Double click on the file and follow steps to install this AVI converter software on your computer’s hard drive. Press ‘FINISH’ to complete the installation.
3. Once the AVI Converter has been installed, please locate this program on your computer and start the program. This is the 1st step in starting to convert files to be played on your player.

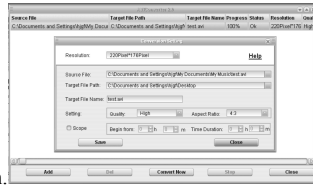

4. The above image shows the starting screen.

Conversion Steps:

① Click on 'Add' to add a file to convert. Then select source file path, as shown in the picture below. This indicates the file that you want converted to play on this player.

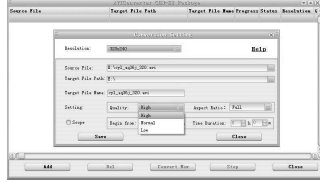

- ② You now have to select where this converted file is to be saved. Select the target file

path.

- ③ Select the convert quality and aspect ratio. Make sure resolution is set at 320x240.

④ Once this is done , press 'Save' key. You may continue to add another file , or press 'Close' key to return previous interface.

5 Press 'Convert Now' to start converting:

After the conversion progress shows 100%, it means that the file is converted successfully. You may now use your USB cable to transfer the file to the player. You are now ready to watch the video file on your player

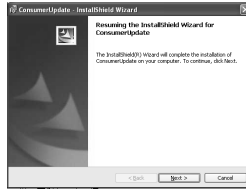

XV. System / Firmware Upgrade [NOT to be DONE if the player is working fine]

The firmware of player can be upgraded by the upgrade tool in the enclosed CD.

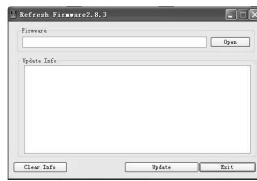

Operations:

1. Run the ConsumerSetup2.4.0.exe in the enclosed CD.

2. Click “Next” as per the promotion on the dialog box. In the “browsing” option of the fourth dialog box, select the “upgrade fool” folder of the enclosed CD, and click “OK” to confirm.

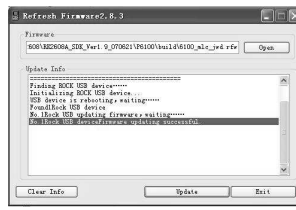

3. Push the power switch to the OFF position, press and hold the POWER ON/OFF button, and then connect the player to the PC via USB cable.
4. The PC displays “rock USB Device”, and asks to install the driver. (If the driver is installed, this progress is skipped.)
5. Run the “Firmware Update” program that you just installed in the START menu.

6. Click “Open” and select the firmware.

7. Click “Start” to upgrade.

8. Disconnect the player and the PC after upgrading.

XVI. Troubleshooting

1. Failure to start/No response on buttons/ player freezes

- Check if the POWER SWITCH is on the position of “ON”, and check the power of battery;
- Connect the unit with your PC or the AC adaptor and check again;
- Push the power switch to the direction of OFF and push it to ON again. Press OK button to turn on the player.
- If it still fails to start after charge , please contact our customer service center.

2 No voice in the earphone

- Please check the volume is 0.
- Please check the connection of the earphone.

3. Serious noise

- Please check whether the pin of the earphone is dirty, as if this is the case, it could be the cause of noise.
- Please check whether the music file is corrupted in some way. Please try playing another music file. If the file is corrupted, it could cause serious noise or not play at all.

4. No sound from the loud speaker

- Check if the setting on the loudspeaker is set as CLOSE. Please check for this in “Settings-Speaker” menu.

5. Display clobber on the screen

- Please check whether the language is properly selected or not, and please enter <Setting>\<system setting>\<language selection> to set the language.

6. Download file failure

- Be sure the connection between computer and player is secure.

- Check whether the memory is used up or not;
- Check whether the USB cable is broken or not.

7. Does not support WMA format music

The player does not support WMA format music files which are lower than 64kbps bit rate.
