What's so special about this mp3 player?

This player is meant to play mp3 and Windows Media™ audio files recorded in the built-in flash memory.

To do so, you need the use of a Windows computer with USB port, extension cable (included) and a music management software (MusicMatch Jukebox).

The Music Management CD that comes with your Digital Audio Player contains all of the necessary software components you need to make your Digital Audio Player work properly.

These components do the following:

- install USB driver for Windows 98SE users. (Refer to page 4)
- enable you to transfer files from your computer to your Digital Audio Player.
- use the MusicMatch Jukebox

software to organize your music collection and transfer the music to your Digital Audio Player.

The MusicMatch Jukebox™ software compresses audio files (from music CDs) to the mp3 or Windows Media Audio (WMA) format so you can play them on your Digital Audio Player. The MusicMatch software also enables you to download files from the internet that are already compressed and then transfer those files to your player (or play the music on your computer).
