Package Includes

ADSL2+ Modem with High-Speed Mode Wireless-G Router
RJ11 Phone Line Cord
RJ45 Ethernet Networking Cable

ADSL In-Line Filter
Power Adapter
User Manual CD
Quick Installation Guide
Registration Card

System Requirements

Active ADSL connection with RJ-11 (via filter)
At least one computer with an installed Network Interface Card
TCP/IP networking protocol installed on each computer
Internet browser

Security
WLAN: 64-bit WEP, 128-bit WEP, WPA-PSK, WPA
SPI Firewall, MAC Address Filtering, Security Log

Protocols Supported
ISP: PPPoE, PPPoA, 1483 Bridged Dynamic/Fixed IP, 1483 Routed
LAN: CSMA/CD, TCP/IP, UDP, AppleTalk and DHCP (client and server)

VPN Support
PPTP, L2TP, and IPSec pass-through

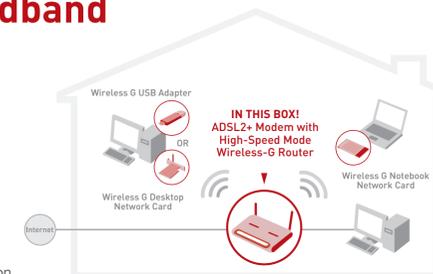

Management
Password protected browser-based

Ports
4 10/100Base-T auto-sensing and auto-uplink RJ45 (LAN)
1 RJ-11 port (ADSL)

LEDs
Power, ADSL, Internet, WLAN, LAN (1,2,3,4)

Operating Range
Up to 200 feet*
* Distance and connection speeds will vary depending on your networking environment.

Share your broadband Internet access

Here's what it does

Belkin networking offers this one-box solution that lets you share your ADSL Internet connection, files, and peripherals, without cables. It combines two essential networking functions in one innovative product—an ADSL Modem with a 4-port Wireless Router. Operating at wireless speeds up to 125Mbps, the ADSL Modem with Wireless-G Router operates on the 802.11g wireless Ethernet standard. This standard is backward-compatible, so you can use it in combination with existing 802.11b Wi-Fi networks. Your Modem-Router also features an integrated 4-port 10/100Base-Tx Ethernet switch so you can connect your wired computers easily.

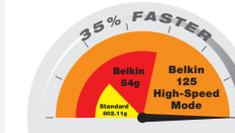

Here's what you need

For Desktop Computers
A Wireless G Desktop Network Card or Wireless G USB Network Adapter connects a desktop computer to your wireless network.

For Laptop Computers
A Wireless G Notebook Network Card connects a notebook computer to your wireless network.

High-Speed Mode is 35% FASTER than 802.11b

The High-Speed Mode (HSM) Wireless G Router implements networking speeds that are faster than standard 802.11g. HSM provides up to a 35% increase in "real world" networking speeds—this means you will see overall speed improvements in "mixed mode" networking environments where other 802.11g devices may be present. High-Speed Mode offers even faster speeds in pure HSM networking environments. HSM technology is interoperable with all other 802.11g compliant devices and is a "good neighbour" to other wireless devices. So, gain the High-Speed Mode advantage!

125 High-Speed Mode
802.11g 2.4GHz • Wireless
35% FASTER

Benefits

- Allows you to connect to ADSL Internet access and share your high-speed connection, data files, and network peripherals without wires
- Transfers data at speeds up to 125Mbps, using the 802.11g wireless standard
- Features advanced security modes including WPA Pre-Shared Key, WPA (Radius Server), 128-bit WEP, and 64-bit encryption
- Protects your network from outside intrusions by hackers using NAT and SPI firewalls
- Allows you to connect up to 4 wired computers to your network with an integrated 10/100Base-T Ethernet switch
- Works with PCs and Macintosh® computers
