Complete Small Scale Control

The popular CPM1A family of micro PLCs now includes models with AC inputs. In one product family, you get cost- and space-efficient controllers that handle AC input/relay outputs or DC inputs/transistor or relay outputs with high speed performance and extensive expansion options.

The CPM1A's expanded product offering includes:

- New AC input/relay output models
- Numerous models manufactured in the U.S.A.
- CPUs with 10, 20, 30, 32, or 40 point I/O densities
- Expansion to 100 I/O
- Built-in 5 kHz high-speed counter that supports increment mode or phase differential encoder inputs at 2.5 kHz
- Peripheral ports that are easily converted to RS-232C ports for communications with PCs, other Omron PLCs, or operator interface terminals
- Analog modules, temperature sensor modules, and numerous I/O expansion modules are available

CPM1A-chiever Kit

The ultimate starter kit! Whether you want to evaluate the CPM1A or need one for your application, this kit has everything that you need to get started, including software!

Contents include:

- CPM1A micro PLC with 20 I/O (DC IN/Relay OUT) and AC or DC power supply
- CPM1A-20CDR input simulator
- RS-232C adapter
- Program download cable
- Programming software
- CPM1A operation manual
- CPM1A programming manual
- Introduction to PLC guide

Temperature Sensor Module

Directly input RTD temperature signals into your Micro PLC with the **CPM1A-TS101-DA** temperature sensor module. This module connects directly to the expansion port and accepts 2 Pt 100 inputs with an input temperature range of -40°C to 250°C. Other RTD and thermocouple modules available.

Expansion I/O options

The CPM1A is small but your expansion options are great. Choose among several modules with options like:

- Relay or transistor output models
- 8-point input expansion module
- 8-point output expansion module
- 20-point I/O expansion module
- Analog input/output

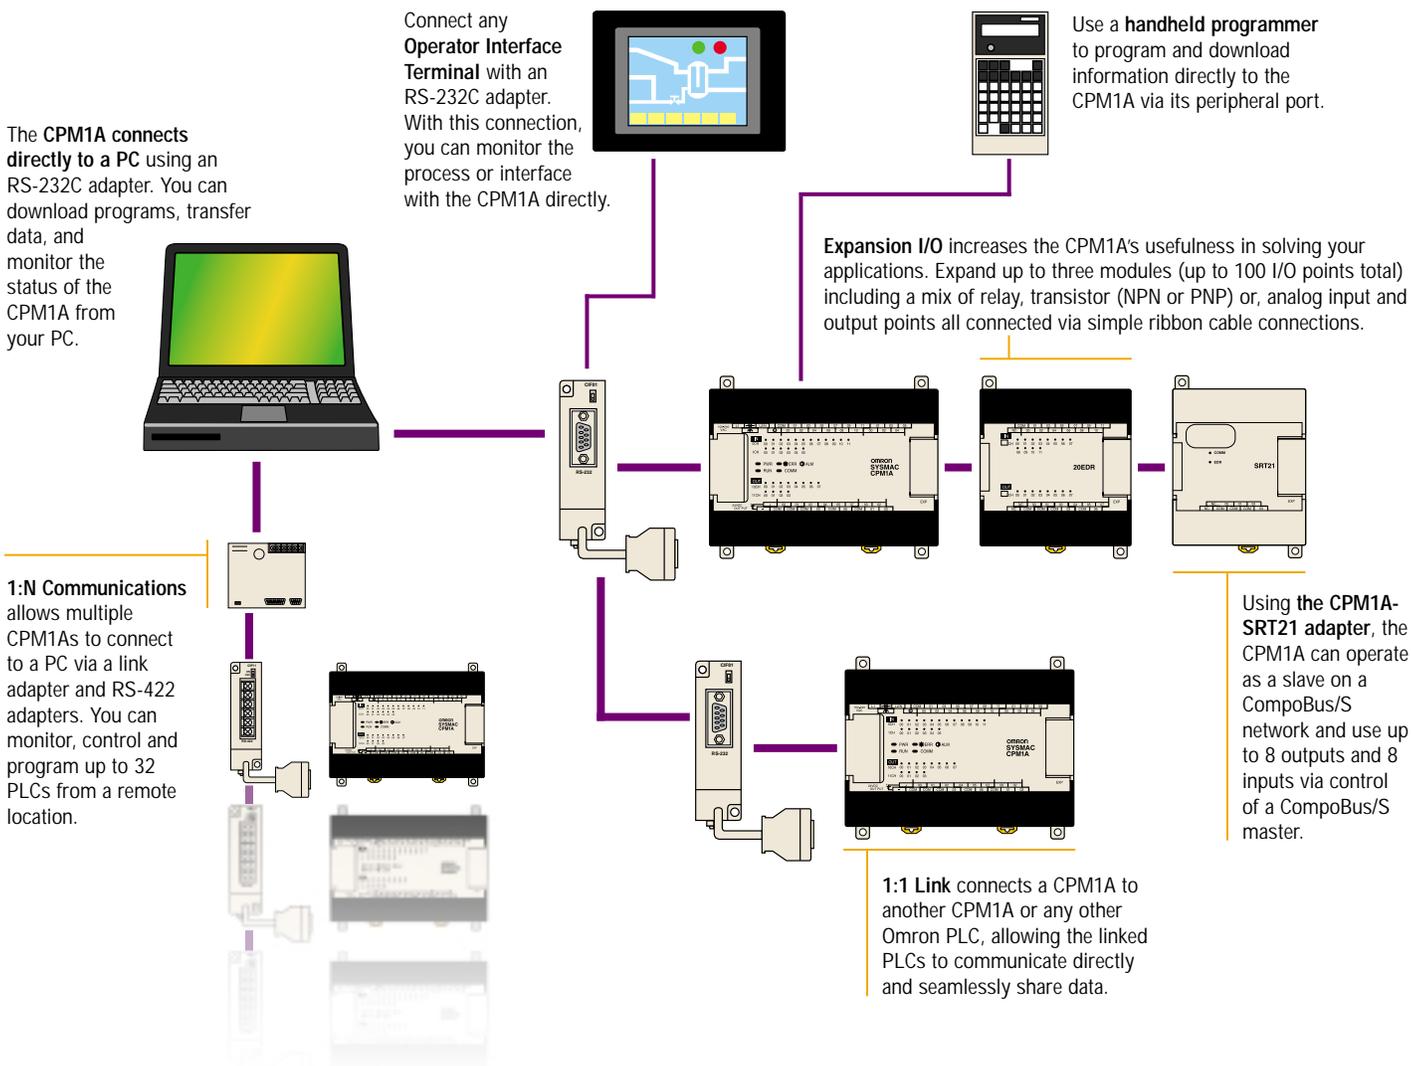

Mixed Analog I/O Module

Quickly incorporate analog signals in your small-scale control systems with the **CPM1A-MAD01** module. Featuring 2 analog inputs/1 analog output with constant monitoring for 'broken wire' and for +/- voltage

System Configuration Options

The CPM1A's small size lets you pack several connections and usage options into a compact panel. It is powerful enough to support up to 100 I/O, offer multiple control options, and connectivity to several different devices including bar code readers, operator interfaces, process and temperature controllers, etc.

Adapters

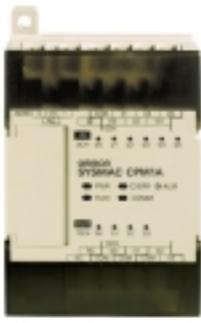

Item	Description	Part Number
RS-232C Adapter (Cable)	Converts Peripheral port to RS-232C level / Cable 3.3 m	CQM-CIF02
RS-232C Adapter (DIN)	Converts Peripheral port to RS-232C level / DIN Mount	CPM1-CIF01
RS-422 Adapter	Converts RS-232C port to RS-422A (Requires 5VDC power supply)	NT-AL001
Link Adapter	Converts RS-422 to RS-232C	3G2A9-AL004-E
RS-422 Adapter (DIN)	Converts Peripheral port to RS-422A / DIN Mount	CPM1-CIF11

A Complete Family of Micro PLC Solutions

CPM1 is a low cost, and simple control option with a CE mark

The cost-effective CPM1 micro PLC CPU is easily set up and has 10, 20, and 30 base I/O and is expandable to 90 I/O. CE mark is standard on all versions.

The ultra small SRM1 network controller supports distributed I/O

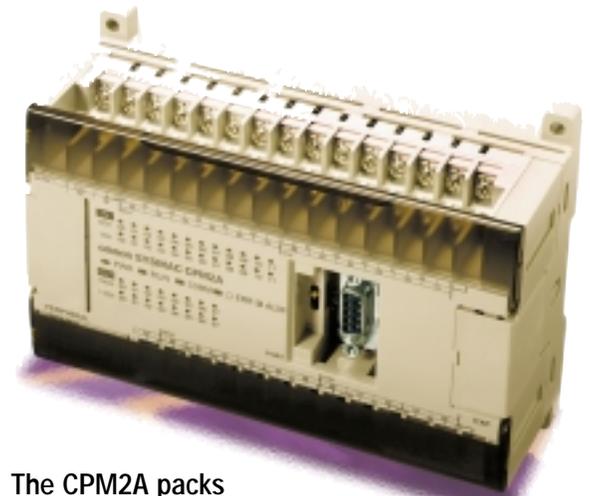

Distribute your control with the SRM1 network controller. It offers the flexibility and power of a small PLC in a distributed I/O package. It supports multi-point relay terminal connections or remote

terminal connections up to 500 meters away. Each module in the distributed I/O network communicates directly with the SRM1 via twisted pair, eliminating complex cabling and allowing you to place the control device close to your application.

The new, ultra-slim CPM2C offers a variety of communication and expansion options

The 33 mm wide CPM2C supports up to 140 I/O (5 expansion modules) via screw terminal contacts or a connector that is compatible with several styles of I/O terminals. Built-in features include a real time clock, RS-232C port, synchronous pulse control and numerous expansion options. Communication options include RS-232C, Omron's Host Link and no-protocol communications. The CPM2C also has a combination RS-232C/peripheral port that can support two devices simultaneously from one location.

The CPM2A packs speed, power, control options, and large I/O capacity in a micro-sized package

Use the CPM2A's base I/O of 30, 40, and 60 points to integrate power, speed, and advanced control into your small-scale applications. It is expandable to 120 I/O points, has a built in RS-232C port, removable terminals, and four high-speed interrupts.
