

Update to *Power Macintosh User's Guide*

The Power Macintosh 5260/120 comes with a faster processor and a greater minimum amount of DRAM than described in Appendix D—"Technical Information"—of your user's guide.

The following items provide the details of these enhancements.

Processor

- PowerPC™ 603e processor @ 120-megahertz (MHz) clock frequency

Memory

- a minimum of 12 MB of dynamic random-access memory (DRAM) supplied in removable SIMMs (32-bit wide, 70-nanosecond, 72-pin fast-paged mode)
