

201 22" Planer

Designed with production in mind, a new machine with increased capacity and loaded with features to make short work of your work!

The Gold Standard Since 1921. **POWERMATIC**[®]

201

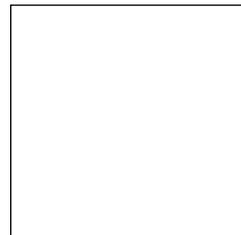

22" Planer

This 1,300 lb. heavy-duty cast iron planer offers rock solid rigidity and accurate planing for years to come. The hinged top allows easy access to the rollers and knives. The hood comes standard with a 5" dust port for easy attachment to any dust collection system. The cutterhead is complete with four high speed steel knives and turns at 4,800 rpm producing 19,200 cuts per minute. The anti-kick back fingers and pressure bar are located in close proximity to the cutterhead for an exceptional finish. ■ The well designed infeed and outfeed rollers are fitted with roller bearings for long roller life. The sectional infeed and chip breaker are specially designed to allow multiple boards to be planed at the same time. The adjustable bed roller facilitates both rough and finish planing. The solid steel outfeed roller is machined with small serrations to insure a smooth finish yet provide positive feeding. ■ The two-speed gearbox with machined detents is quickly changed up front when switching from rough to finish work. You may easily raise the massive ribbed cast iron, ground finished table $\frac{1}{16}$ " with each turn of the hand wheel. ■ The model 201 is available with $7\frac{1}{2}$ horsepower, 3-phase 230 or 460 volt or $7\frac{1}{2}$ horsepower, single-phase motors. This planer is perfect for the small to medium shop with continuous planing requirements.

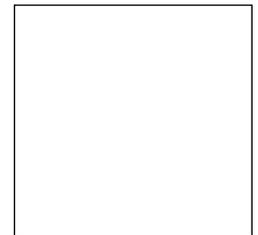

FEATURE	BENEFIT
All cast iron construction 1,300 lb.	Solid, rigid, accurate with no vibration
2 feed speeds — 20/30 fpm	Accommodates rough and fine finish work
Segmented infeed roller with sectional chip breaker	Allows multiple piece planing and consistent feed and finish
4-knife head — 22" wide	Fine finish cuts at 19,200 per minute and widest capacity in its class
Roller bearing feed rollers	Insure long trouble-free use of machine
Adjustable bed rollers	Allow smooth feeding of rough and finished workpieces
Heavy cast iron table travels on 2 large lead screws	Offers full support for large workpieces. 1 handle turn = $\frac{1}{16}$ "

Large diameter 4-knife cutterhead, sectional infeed roller and chip breaker with roller bearing support on both infeed and outfeed rollers.

Heavy-duty, oil bath 2-speed gearbox transmits full power to feed rollers.

Oversized table with fully adjustable easy set bed rollers. Large inch/metric scale for easy viewing.

The Gold Standard Since 1921.
