# Preface

## Copyright Notice

Copyright © 2008 MSC Vertriebs GmbH. All rights reserved.

Copying of this document, and giving it to others and the use or communication of the contents thereof, are forbidden without express authority. Offenders are liable to the payment of damages.

All rights are reserved in the event of the grant of a patent or the registration of a utility model or design.

## Important Information

This documentation is intended for qualified audience only. The product described herein is not an end user product. It was developed and manufactured for further processing by trained personnel.

## Disclaimer

Although this document has been generated with the utmost care no warranty or liability for correctness or suitability for any particular purpose is implied. The information in this document is provided "as is" and is subject to change without notice.

## EMC Rules

This unit has to be installed in a shielded housing. If not installed in a properly shielded enclosure, and used in accordance with the instruction manual, this product may cause radio interference in which case the user may be required to take adequate measures at his or her own expense.

## Trademarks

All used product names, logos or trademarks are property of their respective owners.

## Certification

MSC Vertriebs GmbH is certified according to DIN EN ISO 9001:2000 standards.

## Life-Cycle-Management

MSC products are developed and manufactured according to high quality standards. Our life-cycle-management assures long term availability through permanent product maintenance. Technically necessary changes and improvements are introduced if applicable. A product-change-notification and end-of-life management process assures early information of our customers.

## Product Support

MSC engineers and technicians are committed to provide support to our customers whenever needed.

Before contacting Technical Support of MSC Vertriebs GmbH, please consult the respective pages on our web site at [www.msc-ge.com/support-boards](http://www.msc-ge.com/support-boards) for the latest documentation, drivers and software downloads.

If the information provided there does not solve your problem, please contact our Technical Support:

## 1.3 Definitions and Abbreviations

COM	Computer-On-Module
RTC	Real Time Clock
ATX	Advanced Technology Extended
PCI	Peripheral Component Interconnect
IDE	Integrated Drive Electronics
EIDE	Enhanced Integrated Drive Electronics
CF	Compact Flash
ATA	Advanced Technology Attachment
ATAPI	Advanced Technology Attachment with Packet Interface
SATA	Serial Advanced Technology Attachment
USB	Universal Serial Bus
PEG	PCI express Graphics
GPIO	General Purpose Input / Output
LVDS	Low Voltage Differential Signaling
JILI	JUMPTec Intelligent LVDS Interface
LAN	Local Area Network
VGA	Video Graphics Array
LPC	Low Pin Count
POST	Power on self test
SMBus	System Management Bus
MDI	Medium Dependent Interface

## 2 Introduction

### 2.1 Product Description

COM Express modules are compact, highly integrated Single Board Computers.

Typically a COM Express module consists of CPU, chipset, memory, video controller, Ethernet controller, BIOS flash and EIDE-, SATA- and USB controller. Interface controllers (e.g. for PCMCIA) or connectors (e.g. RJ45) are implemented on the base board on to which the COM Express module can be mounted via one or two 220-pin SMD-connectors. Beside the power supply also signals for PCIe- and PCI-bus, EIDE, SATA, USB, LPC etc. are present on these connectors.

The type of interfaces that is led from the COM Express module to the base board depends on the type of module that is used. The COM Express specification defines five different types which differ in number and pin assignment of the module connectors.

Thanks to the standardized mechanics and interfaces the system can be scaled arbitrarily. In spite of a modular concept the systems design is very flat and compact.

COM Express modules require a base-board for successful operation.

The base board described below acts as an evaluation board for the COM Express modules.

### 2.2 Features

- Interface for COM Express module type 2 up to extended form factor
- PCI slots 32Bit v2.1
- 6 PCIe slots
- PCIe x16 graphics / SDVO
- VGA interface
- LVDS interface
- Standard J1L1 / J1L140
- TV-Out
- AC'97-Link
  - LineIn
  - LineOut
  - Headphone
  - Microphone
- High Definition Audio
  - LineIn
  - LineOut
  - Microphone
  - Center / LFE
  - Surround
  - Side

- 40 pin IDE interface Ultra ATA-100/66/33
- 44 pin IDE interface Ultra ATA-100/66/33
- Compact flash interface Spec. v3.0
- SATA channels up to 150MB/s
- 8 USB2.0 root hub interfaces
- LAN interface max. 1GBit
- LPC slot
- Pin header for GPIOs
- SuperIO W83627THF
  - 2x PS/2
  - 2x COM
  - 1x IrDA
  - fan interfaces
- Hardware monitoring
- Power supply via ATX connector
- POST display on LPC
- Serial EEPROM on I<sup>2</sup>C-Bus
- Serial EEPROM on SMBus
- On-board BIOS Flash
- Beeper

Note : Support for all above features will also depend on the COM Express module being used. Not all modules support the maximum number of interfaces.

## 2.3 Block Diagram

Illustration 1 Block Diagram Base Board

## 3 Mechanics

### 3.1 Dimensions

Dimension:	254.5 mm x 36.8 mm
Width:	1.6 mm +/-10%
Tolerances of the drill holes:	+/- 0.1mm in X and Y
Tolerances of the diameter:	+ 0.1 mm

### 3.2 Assembly notes

CXC:	4x	M2.5 x 5mm bolt
CXB:	5x	M2.5 x 5mm bolt
CXE:	7x	M2.5 x 5mm bolt

## 4 Hardware

### 4.1 Plug-in Position of the COM Express module

Sockets for a COM Express type 2 module is available on the base board.

Following form factors are supported:

- Compact module (Industry Consortium form-factor)
- Basic module
- Extended module

#### Specification:

- Reference: X1
- Connector: AMP / Tyco 3-1827233-6  
0.5 mm pitch free height 440 pin 5H plug (combination of two 220pin plugs)
- Pinout: Refer to COM Express specification for type 2 module

**Table 2 COMExpress Connector Rows C and D**

## 4.2 PCI Slots

Four 32-bit PCI slots are provided according to PCI specification v2.1.

The signal assignment for slot 0, slot 1, slot 2 and slot 3 is defined in the COM Express specification.

- INTA#, INTB#, INTC# and INTD#
- REQ[0..3]#
- GNT[0..3]#
- IDSEL

PCI Slot	Reference
PCI Slot 0	X2
PCI Slot 1	X3
PCI Slot 2	X4
PCI Slot 3	X5

**Table 4 Pin out PCI**

### 4.3 PCI Express x1 Slots

One PCIe x1 slot is assigned to each of the 6 PCIe lanes of the COM Express module.

Note: The order of the connectors has changed on the new layout. Now X6 is near PEG slot.

Note : The number of PCIe lanes available will depend on the COM Express module used – not all modules can support 6 PCIe lanes.

PCIe Lane	References
PCIe Lane 0	X6
PCIe Lane 1	X7
PCIe Lane 2	X8
PCIe Lane 3	X9
PCIe Lane 4	X10
PCIe Lane 5	X11

**Table 5 Assignment PCIe Lane to connector reference**

#### Specification:

- References: X6 - X11
- Connector: AMP / Tyco 4-1612163-1
- Pinout: Refer to PCI express specification

Pin	Signal	Pin	Signal
A1	PRSNT1#	B1	12V

**Table 6 Pin out PCI Express**

## 4.4 PCI Express x16 Graphics Slot

A PCIe x16 graphics slot is provided for insertion of PEG graphics cards.

Depending on the chipset the PCIe signals are multiplexed with SDVO signals, thus SDVO modules can be run in this slot as well. SDVO or PCIe graphics will be activated automatically via PullUps of the SDVO I<sup>2</sup>C interface on the SDVO module.

### Specification:

- References: X12
- Connector: AMP / Tyco 4-1612163-4
- Pinout: Refer to PCI express specification

Pin	Signal	Pin	Signal
A1	PRSNT1#	B1	12V

Table 7 Pin out PCI Express x16 Graphics Slot

## 4.5 VGA Interface

An analog display can be connected via a VGA (VESA DDC) interface.

### Specification:

- References: X13
- Connector: Suyin 7507S-15G5T-A
- Pinout: Refer to Table 3

Pin	Signal name	Function
1	RED	Signal red
2	GREEN	Signal green
3	BLUE	Signal blue
4	RSVD	reserved
5	GND	Ground digital
6	RGND	Ground red
7	GGND	Ground green
8	BGND	Ground blue
9	+5V	+5V VDC
10	SGND	Ground Synchronisation
11	ID0	Monitor ID Bit 0 (optional)
12	SDA	DDC Data
13	HSYNC	Horizontal Sync.
14	VSYNC	Vertical Sync.
15	SCL	DDC Clock

**Table 8 Pinout VGA Interface**

## 4.6 LVDS-Interface

LCDs can be connected via a single channel LVDS interface:

### Specification:

- References: X14
- Connector: Hirose DF19G-20P-1H
- Pinout: Refer to Table 4

Pin 20 can be configured via 0 Ohm resistors to "OPEN" or "GND"

Pin	Signal name	Function
1	VDD	Power Supply: +3.3V
2	VDD	Power Supply: +3.3V
3	VSS	Ground
4	VSS	Ground
5	LVDS_A0-	LVDS Negative data signal (-)
6	LVDS_A0+	LVDS Positive data signal (+)
7	VSS	Ground
8	LVDS_A1-	LVDS Negative data signal (-)
9	LVDS_A1+	LVDS Positive data signal (+)
10	VSS	Ground
11	LVDS_A2-	LVDS Negative data signal (-)
12	LVDS_A2+	LVDS Positive data signal (+)
13	VSS	Ground
14	LVDS_A_CK-	LVDS Negative clock signal (-)
15	LVDS_A_CK+	LVDS Positive clock signal (+)
16	VSS	Ground
17	LVDS_A3-	LVDS Negative data signal (-)
18	LVDS_A3+	LVDS Positive data signal (+)
19	VSS	Ground
20	NC / VSS	Reserved / Ground

**Table 9 Pinout Single Channel LVDS-Interface**

### 4.6.1 LVDS EEPROM

To store configuration data of the LCD, a serial EEPROM is connected to the signals LVDS\_I2C\_CK and LVDS\_I2C\_DAT.

To avoid conflicts with configuration EEPROMs connected via the J1LI connector, this EEPROM can be assembled optionally.

## 4.6.2 Backlight Inverter Interface

The supply voltage of the backlight can be adjusted with jumper JP0601. The according position is printed on the PCB.

Jumper J5 should be set according to the backlight inverter used.

If the inverter needs a low active start signal, jumper J5 has to be set to L (pin1 connected to pin2).

If the inverter needs a high active start signal, jumper J5 has to be set to H (pin2 connected to pin3).

Brightness of the backlight inverter is controlled via the LVDS-BKLT-CTRL signal.

The LVDS-BKLT-CTRL signal of the COM Express module is a PWM signal with current chipsets. This signal is integrated and then limited to the maximum allowable voltage of the backlight inverter via a voltage divider.

Control voltage: 0...3V

A value of 0V corresponds to maximum brightness.

### Specification:

- References: X15
- Connector: Molex (53047-0510) 53261-0590
- Pinout: Refer to Table 5

Pin	Signal name	Function
1	VCC	Power supply backlight
2	GND	Ground
3	BLON#	Backlight On
4	VCON	Brightness control
5	GND	Ground

**Table 10 Pinout Backlight**

## 4.7 JILI Interface

### 4.7.1 Standard JILI Connector

A standard JILI connector can be used alternatively for connection of LCDs.

Both, single and dual channel LCDs, can be connected to the base board via small adaptor boards.

**Specification:**

- References: X16
- Connector: Hirose FH12-40S-0.5SV
- Pinout: "standard JILI" according to JILI specification [4]

### 4.7.2 JILI40 Connector

Any LCD display can be connected via an adaptor board to the JILI40 connector.

Two 24 bit LVDS channels are available on this 40-pin header

**Specification:**

- References: X46
- Connector: Samtec TMM-120-01-LM-D-SM-P
- Pinout: "JILI40" according to JILI specification [4]

## 4.8 TV Out

A TV-OUT connector is implemented for displaying the video signal on a TV set (or the like). The base board supports the following video signals

- Composite Video
- Component Video (YPbPr)
- S-Video

The type of the video signal is defined by the graphics controller on the COM Express module.

### Specification:

- References: X17
- Connector: AMP 5786766-1
- Pinout: Refer to Table 6

Pin	Signal name	Composite	Component	S-Video
1	TV_IRTN_B	Ground	Ground	Ground
2	TV_IRTN_C	Ground	Ground	Ground
3	TV_DACB	not used	Luminance (Y)	Luminance
4	TV_DACC	not used	Chrominance (Pr)	Chrominance
5	TV_DACA	CVBS	Chrominance (Pb)	not used
6	TV_IRTNA	Ground	Ground	Ground
7	RSVD	reserved	reserved	reserved

**Table 11 Pinout TV-Out**

The signals can be adapted to a different interface with a 10-pin header.

### Specification:

- References: X53
- Connector: IDC-M 10pol. THT RM2.54
- Pinout: Refer to Table 7

Pin	Signal	Pin	Signal
1	GND	2	TV_DACA
3	GND	4	TV_DACB
5	GND	6	TV_DACC
7	GND	8	GND
9	GND	10	GND

**Table 12 Pinout TV-Out Pin header**

## 4.9 Audio

An AC'97 codec V2.2 is connected to the AC link of the COM Express module. Footprint and circuit are compatible to following AC'97 codecs:

- VIA VT1612A
- Realtek ALC650

Following LF signals are provided by the AC'97 codec:

- Mono Microphone
- Stereo LineIn
- Stereo LineOut
- Stereo Headphone

Alternatively a VIA VT1708 HDA codec can be connected to the AC link of the COM Express module. The audio interface can be selected with Jumper J0701.

Following LF signals are provided by the HDA codec:

- Stereo LineIn
- Stereo LineOut
- Stereo Microfon
- Mono Center / Mono LFE
- Stereo Surround
- Stereo Side

### 4.9.1 AC'97 codec

#### 4.9.1.1 Mono-Microphone

Bias voltage for capacitor microphones is provided.

#### Specification:

- References: X18
- Connector: Kycon ST-3000Mono-Microphone
- Pinout: Refer to Table 8

Pin	Signal name	Function
1	GND	Ground
2	MIC_BIAS	Bias initial load (ring)
3	MIC	NF signal (tip)

**Table 13 Pinout Microphone**

#### 4.9.1.2 Stereo LineIn

##### Specification:

- References: X19
- Connector: Kycon ST-3000
- Pinout: Refer to Table 9**Table 14**

Pin	Signal name	Function
1	GND	Ground
2	LINEIN_R	NF signal right (ring)
3	LINEIN_L	NF signal left (tip)

**Table 14 Pinout LineIn**

#### 4.9.1.3 Stereo LineOut

##### Specification:

- References: X20
- Connector: Kycon ST-3000
- Pinout: Refer to Table 10

Pin	Signal name	Function
1	GND	Ground
2	LINEOUT_R	NF signal right (ring)
3	LINEOUT_L	NF signal left (tip)

**Table 15 Pinout LineOut**

#### 4.9.1.4 Stereo Headphone

##### Specification:

- References: X21
- Connector: Kycon ST-3000
- Pinout: Refer to Table 11

Pin	Signal name	Function
1	GND	Ground
2	HPOUT_R	NF signal right (ring)
3	HPOUT_L	NF signal left (tip)

**Table 16 Pinout Headphone**

## 4.9.2 HDA codec

### Specification:

- References: X39
- Connector: Foxconn JAS331-H1G2-4F
- Pinout: Refer to Table 12

Con	colour	Function
1	light blue	Line In
2	lime	Line Out
3	pink	Mikrofon
4	orange	Center / LFE
5	black	Surround
6	grey	Side

**Table 17 Pinout LineOut**

## 4.10 IDE Interface

A standard IDE interface is provided according to ATA/ATAPI, with the controller supporting at least Ultra-ATA100 with 100 MB/sec data rate. The transfer mode that can be selected depends on the cable used and which modes are supported by the drives.

Using a ATA100 cable on X22, avoid a master slave combination with X23 or X24.

### 4.10.1 Primary IDE Channel

#### 4.10.1.1.1 40-pin IDE interface

A 40-pin IDC connector is provided at the primary IDE channel for standard IDE drives.

### Specification:

- References: X22
- Connector: FCI 75869-118
- Pinout: Refer to Specification ATA/ATAPI-6 [6, page 400, Table A3]

#### 4.10.1.1.2 44-pin IDE Interface

For connection of 2.5" hard disks, a 44-pin IDC connector is provided at the primary IDE channel.

### Specification:

- References: X23
- Connector: Yamaichi ZP7-44-S-G
- Pinout: Refer to Specification ATA/ATAPI-6 [6, page 412, Table A16]

### 4.10.1.1.3 Compact Flash Interface

A socket for compact flash cards, type I/II, is provided at the primary IDE channel.

The compact flash interface supports True IDE mode according to compact flash specification rev. 3.0.

Inter alia the compact flash specification rev. 3.0 supports the UDMA mode.

#### Specification:

- References: X24
- Connector: Yamaichi CF050P2-003-10-D2
- Pinout: Refer to specification "CF+ & CF specification rev. 3.0" [7, page 24, table 4]

## 4.11 SATA-Interface

Up to four SATA drives can be connected to the SATA interfaces.

Note : Depending on the COM Express module used, not all SATA ports are available.

Every SATA signal connector has its own power supply connector.

SATA Channel	References
SATA 0	X25
SATA 1	X26
SATA 2	X27
SATA 3	X28

**Table 18 Assignment SATA Channel to Connector Reference**

#### Specification SATA signal connector:

- References: X25 - X28
- Connector: Molex 87713 series
- Pinout: Refer to Specification SATA [8, page 46, table 3]

#### Specification Power Supply:

- References: X49 - X52
- Connector: AMP 171825-4
- Pinout: Refer to ATX specification V2.2 [2, "Floppy Drive Power Connector"]

## 4.12 USB Topology

Eight USB ports are provided by the COM Express module.

The exact assignment of each port is defined in the following table:

USB-Port	References	Beschreibung
USB0	X29	External dual connector 1
USB1	X29	External dual connector 1
USB2	X30	External dual connector 2
USB3	X30	External dual connector 2
USB4	X31	External dual connector 3
USB5	X31	External dual connector 3
USB6	X32	External dual connector 4
USB7	X32	External dual connector 4

**Table 19 Assignment USB Ports**

### 4.12.1 USB Power Supply

The power supplies are protected by USB power switches. In addition the input voltages of the USB power switches are protected by resettable fuses.

The USB power switches have the following functions:

- The output current is limited to 500mA per port
- A signal to detect overcurrent is generated for each two ports
- USB0 and USB1 have one common signal to detect overcurrent
- USB2 and USB3 have one common signal to detect overcurrent
- USB4 and USB5 have one common signal to detect overcurrent
- USB6 and USB7 have one common signal to detect overcurrent

#### Specification:

- References: X29 - X32
- Connector: AMP 787617-2 (Dual USB connector type A)
- Pinout: according to USB specification 2.0 [10]

## 4.13 Ethernet

The base board can be connected to a local area network with an Ethernet interface. The COM Express module already provides MDI signals, so that only the transformer on the base board required.

The transformer PULSE H 5004 not only supports 10BaseT and 100BaseTX but also 1Gbit.

### Specification:

- References: X33
- Connector: AMP 2-406549
- Pinout: Refer to IEEE Std. 802.3 [9, section three, page 225]

## 4.14 LPC Slot

An LPC slot is available for insertion of LPC expansion boards.

### Specification:

- References: X34
- Connector: 36-pin header, 2.54mm
- Pinout: Refer to Table 15

Pin	Signal	Pin	Signal
1	VCC5V	2	VCC5V
3	NC	4	VCC3V3
5	VCC3V3	6	NC
7	VCC3V3_SBY	8	GND
9	GND	10	LPC_RST#
11	GND	12	LPC_LAD0
13	LPC_LAD1	14	LPC_LAD2
15	LPC_LAD3	16	LPC_FRAME#
17	GND	18	LPC_DRQ0
19	GND	20	LPC_CLK
21	GND	22	LPC_PWRDWN
23	GND	24	PME#
25	GND	26	LPC_SMI#
27	GND	28	SERIRQ
29	GND	30	PCI_CLKRUN#
31	GND	32	LPC_DRQ1#
33	GND	34	CPU_RST#
35	GND	36	GND

**Table 20 Pinout LPC-Slot**

## 4.15 I/O Connector

An alternative SuperIO controller can be integrated via a 36-pin connector. In this case the onboard chip is not populated and a piggy back board with the SuperIO chip is plugged into the I/O and into the LPC connector.

### Specification:

- References: X45
- Connector: CAB 1002-161-036
- Pinout: Refer to Table 16

Pin	Signal	Pin	Signal
1	SMB_CLK	2	SLP_S3#
3	SMB_DAT	4	SLP_S4#
5	KBDAT	6	SLP_S5#
7	KBCLK	8	EXT_THRM#
9	MSDAT	10	SMBALERT#
11	MSCLK	12	NC
13	NC	14	THRMTRIP#
15	NC	16	BATLOW#
17	NC	18	NC
19	NC	20	NC
21	COM1_DCD#	22	COM2_DCD#
23	COM1_RXD	24	COM2_RXD
25	COM1_TXD	26	COM2_TXD
27	COM1_DTR#	28	COM2_DTR#
29	COM1_DSR#	30	COM2_DSR#
31	COM1_RTS#	32	COM2_RTS#
33	COM1_CTS#	34	COM2_CTS#
35	COM1_RI#	36	COM2_RI#

**Table 21 Pinout I/O-Connector**

## 4.16 GPIO

The COM Express module provides four general purpose outputs and four general purpose inputs.

The GPIs have PullUp resistors and are routed to a dip switch (SW1103). With the dip switch the GPIs can be connected to ground. The assignment GPI – switch – level is printed on the PCB.

If the PullUp resistors are not populated, you can switch LPC\_SMI# or HWM\_SMI# to GPIO, GPI1, GPI2 or GPI3 with jumper JP1101.

The GPOs are connected to LEDs for optically status display.

### Specification:

- References: X35
- Connector: CAB 1002-161-036
- Pinout: Refer to Table 17

Pin	Signal	Pin	Signal
1	GPI0	2	GND
3	GPI1	4	GND
5	GPI2	6	GND
7	GPI3	8	GND
9	GPO0	10	GND
11	GPO1	12	GND
13	GPO2	14	GND
15	GPO3	16	GND

**Table 22 Pinout GPIO connector**

## 4.17 ATX Connector

An ATX connector with additional ATX12V connector is available to power the system.

### Specification ATX connector:

- References: X36
- Connector: Molex 44206-0007
- Pinout: Refer to ATX specification V2.2 [2]

### Specification ATX12V connector:

- References: X37
- Connector: Molex 39-29-9042
- Pinout: Refer to ATX specification V2.2 [2]

## 4.18 SuperIO

The Winbond SuperIO W83627THF is integrated on the base board.

### Interfaces used by the SuperIO

- 2 RS232 interface (function of COM port shared with IrDA interface)
- 1 IrDA interface (function shared with COM port)
- PS/2 interface for keyboard and mouse
- 2 fan interfaces
- Voltage control
- 1 temperature control

### 4.18.1 COM Ports

#### Characteristics of the COM ports:

- RS232 standard
- RS232 transceiver ESD protected +/- 15kV
- EMC improved by using EMI filters in the signal lines

#### Specification:

- References: X38
- Connector: Foxconn DM10151-P71
- Pinout: Refer to Table 18  
(COM1: lower Jack, COM2 upper Jack)

Pin	Signal name	Function
1	DCD#	Data Carrier Detect
2	RXD	Receive Data
3	TXD	Transmit Data
4	DTR#	Data Terminal Ready
5	GND	Ground
6	DSR#	Data Set Ready
7	RTS#	Request To Send
8	CTS#	Clear To Send
9	RI#	Ring Indicator

**Table 23 Pinout COM Ports**

### 4.18.2 IrDA

The connectors of the IrDA interface are designed for commercial IrDA transmitters.

#### Specification:

- References: X40
- Connector: CAB 1001-161-005
- Pinout: Refer to Table 19 **Table 24**

Pin	Signal name	Function
1	+5V	Power supply
2	NC	Not connected
3	IRRX	Received data
4	GND	Ground
5	IRTX	Transmission data

**Table 24 Pinout IrDA**

### 4.18.3 PS/2

There is a dual PS/2 connector for PS/2 keyboards and PS/2 mice. The upper jack only supports PS/2 mice. The pins of the lower jack provide both, signals for PS/2 keyboards and for PS/2 mice. Keyboards can be connected directly, mice can only be operated using an according Y-adapter.

#### Specification:

- References: X41
- Connector: Tyco 84376-1
- Pinout: Refer to Tables 20 and 21

Pin	Signal name	Function
1	MSDAT	Mouse Data
2	NC	not connected
3	GND	Ground
4	+5V	VCC
5	MSCLK	Mouse Clock
6	NC	not connected

**Table 25 Pinout Upper PS/2 Jack**

Pin	Signal name	Function
1	KBDAT	Keyboard Data
2	MSDAT	Mouse Data
3	GND	Ground
4	+5V	VCC
5	KBCLK	Keyboard Clock
6	MSCLK	Mouse Clock

**Table 26 Pinout Lower PS/2 Jack**

#### 4.18.4 Fan interface

Two PWM controlled fan interfaces are integrated on the base board. They are located near the COM Express modul.

Measurement of the tacho signal and control of the rotation speed is done by the SuperIO.

##### Specification:

- References: X42 - X43
- Connector: Molex 22-04-1031

Pinout: Refer to Table 27

Pin	Signal name	Function
1	GND	Ground
2	PWM	PWM signal
3	TACHO	Tacho signal

**Table 27 Pinout Fan Interface**

#### 4.18.5 Intel Fan interface

A PWM controlled intel fan interface is shared with X43. Don't use both at the same time.

Measurement of the tacho signal and control of the rotation speed is done by the SuperIO.

##### Specification:

- References: X48
- Connector: Molex 47053-1000
- Pinout: Refer to Table 23

Pin	Signal name	Function
1	GND	Ground
2	+12V	VCC
3	TACHO	Tacho signal
4	PWM	PWM signal

**Table 28 Pinout Fan Interface**

#### 4.18.6 SuperIO Hardware Monitor

You can check different voltages and temperatures using the hardware monitor that is integrated in the SuperIO.

##### Monitored voltages

- VBAT
- 3.3V
- 12V

- 5V

#### **Measured temperatures**

- Ambient temperature  
The temperature is measured with a thermistor.

## **4.19 SMB Hardware Monitor**

In addition to the SuperIO hardware monitor you can also connect a SMBus hardware monitor. This chip enables you to control different voltages, temperatures and rotation speeds in legacy-free-designs where the SuperIO is not supported.

Hardware monitor:

- Winbond W83L786R

#### **Controlled voltages**

- VBAT
- 3.3V
- 12V
- 5V

#### **Measured temperatures**

- Ambient temperature  
The temperature is measured with a thermistor.

#### **Fan interface**

For evaluation and control of the revolution speeds please refer to chapter 4.18.4.

## **4.20 Serial EEPROM on SMBus**

For testing purposes a serial EEPROM (4kBit) is connected to the SMBus. To avoid address conflicts, the address can be selected with dip switch SW1101.

## **4.21 Serial EEPROM on I2C-Bus**

For testing purposes a serial EEPROM (4kBit) is connected to the I2C bus. To avoid address conflicts, the address can be selected with dip switch SW1102.

## 4.22 OnBoard BIOS-Flash

There is a PLCC32 socket on the mother board, where an additional firmware hub can be inserted. To boot from this firmware hub, the firmware hub on the COM Express module has to be disabled with J0203.

## 4.23 POST-Code Display

For debugging purposes a POST code display is implemented on the base board, thus enabling the display of BIOS outputs on IO-port 80h and/or Port 90h.

In addition, these signals are output on a pin header. For prototyping purposes a logic analyser can be connected here.

The pinout of the output connector X44 corresponds to the pinout of the Hewlett Packard HP-PODs.

### Specification:

- References: X44
- Connector: 20-pin header 2.54mm

Pinout: Refer to Table 29

Pin	HP-POD	Function	Pin	HP-POD	Function
1	+5V	not used	2	CLK2	LPC_CLK
3	CLK1	not used	4	D15	not used
5	D14	not used	6	D13	Test signal 3
7	D12	Test signal 2	8	D11	Test signal 1
9	D10	Test signal 0	10	D9	not used
11	D8	Strobe	12	D7	Data 7
13	D6	Data 6	14	D5	Data 5
15	D4	Data 4	16	D3	Data 3
17	D2	Data 2	18	D1	Data 1
19	D0	Data 0	20	GND	Ground

**Table 29 Pinout POST Display (HP-POD)**

### 4.23.1 Lattice Programming Interface

A connector used to program the PLD to decode the POST codes is implemented. To reprogram the PLD a Lattice programming adapter is required.

### Specification:

- References: X47
- Connector: CAB 714-91-164-31-007 (socket)
- Pinout: Refer to Table 30

Pin	Signal name	Function
1	VCC	Power Supply
2	SDO_TDO	Serial Data Out
3	SDI_TDI	Serial Data In
4	ISPEN#	Programming Enable
5	KEY	Keypin
6	MODE_TMS	Programming Mode
7	GND	Ground
8	SCLK_TCK	Serial Clock

**Table 30 Pinout Lattice Programming Interface**

## 4.24 Battery

The RTC on the COM Express module is buffered with a socketed battery on the base board.

In order to clear the CMOS memory, the battery voltage to the COM Express module can be disconnected via jumper J1101.

**Type of battery:** 2032

**Battery socket:** Renata SMTU2032-1

## 4.25 Beeper

A piezo signal generator is implemented for acoustic signals.

**Type:** Digisound F/DGX05P

## 4.26 Power Button

For switching the system on a Power push button has been implemented.

The PWR\_BTN# signal is low-active and is connected directly to the corresponding pin of the COM Express module.

**Type:** C&K JTP-1230F

## 4.27 Reset Button

There is a push button for resetting the system.

The RESET# signal is low-active and is connected to the SYS\_RESET#- pin of the COM Express module.

**Type:** C&K JTP-1230F

## **4.28 Miscellaneous**

### **4.28.1 Resistors for current measuring**

Resistors are inserted into the power supply lines of the COM Express module, the PCI express graphics slot as well as into every PCI slot and one PCI express x1 slot. These can be used for current measurement.

In addition to there is one jumper to measure the current using an external wire loop and clamp meter.

### **4.28.2 Ground Pins**

There are several ground pins spread over the base board for connection of measurement equipment.

### **4.28.3 Sleep State LED Display**

The MSC CX-MB EVA2 has 3 LEDs to display the SleepStates.

LED1201 displays status S3.

LED1202 displays status S4.

LED1203 displays status S5.

## 4.29 Jumper settings

### 4.29.1 BIOS-Flash Jumper J0203

To boot from the firmware hub in the PLCC32 socket on the mother board, install J0203. The firmware hub on the COM Express module will be automatically disabled.

Function	J0203
COM Express module flash	removed (BIOS disable LED off)
Flash in PLCC32	installed (BIOS disable LED on)

### 4.29.2 PCI I/O voltage Jumper J0306

PCI VCCIO	Pins to close
+3,3 V	2-3
+5,0 V	1-2

If no Jumper is closed, the VCCIO plane is powered by 3V over a diode.

### 4.29.3 Backlight power Jumpers JP0601

Voltage	Pins to close
+12,0 V	5-6
+5,0 V	3-4
+3,3 V	1-2

### 4.29.4 Backlight polarity Jumper J5

Function	Pins to close
LVDS_BKLT_EN	2-3
LVDS_BKLT_EN#	1-2

### 4.29.5 AC'97 / HDA select Jumper J0701

Function	J0701
AC'97 codec	removed
HDA codec	installed

### 4.29.6 Compact Flash Master Jumper J0802

Function	J0802
Master	removed
Slave	installed

### 4.29.7 LAN speed mode Jumper J1003

Function	J1003
10 / 100 Mbit	all removed
Gigabit	1-2 and 3-4 installed

**4.29.8 Battery Jumper J1101**

Function	J1101
Battery on	installed

**4.29.9 Super I/O disable Jumper J6**

Function	J6
Super I/O enabled	1-2
Super I/O disabled	2-3

**4.29.10 SMBus Hardware monitor address Jumper J1303**

SMBus Address	J1303
0101 1110	removed
0101 1100	installed

**4.29.11 ATX Funktion Jumper J1301**

PS_ON# from	close
PM_SLPS3#	1-2
PM_SLPS4#	3-4
PM_SLPS5#	5-6

**4.29.12 No ATX Jumper J1302**

Function	J1302
no ATX	installed

**4.29.13 GPI SMI Jumper JP1101**

COMX_GPI	LPC_SMI#	HWM_SMI#
GPI0	1-2	2-3
GPI1	4-5	5-6
GPI2	7-8	8-9
GPI3	10-11	11-12

**4.29.14 GPI GPO Jumper X35**

COMX_GPIO	GND
GPI0	1-2
GPI1	3-4
GPI2	5-6
GPI3	7-8
GPO0	9-10
GPO1	11-12
GPO2	13-14
GPO3	15-16

**4.29.15 Lane RV Jumper J0504**

Function	J0504
PEG Lane reverse	installed

**DIP-switch settings****4.29.16 LCD EEPROM SW0611**

Switch on	Address
1	A0 high
2	A1 high
3	A2 high
4	-

**4.29.17 SMB EEPROM SW1101**

Switch on	Address
1	A0 high
2	A1 high
3	A2 high
4	-

Do not use address A0 and A4. There can be an address conflict with spd on the memory slot.

**4.29.18 I<sup>2</sup>C EEPROM SW1102**

Switch on	Address
1	A0 high
2	A1 high
3	A2 high
4	-

**4.29.19 GPI-switch SW1103**

COMX_GPO	GND
GPI0	1
GPI1	2
GPI2	3
GPI3	4
