3 Easy Steps

Please refer to the Quick Installation Guide for detailed instructions.

- 1. Install**
Insert the CD in your CD-ROM drive. The Easy Install Wizard will examine your computer settings.
- 2. Connect**
The Easy Install Wizard automatically walks you through connecting the cables from your Router to the computer and modem (cables included).
- 3. Configure**
The software automatically configures the Router to work with your Internet provider.

Share your broadband Internet connection

Here's what it does
Connect your cable/DSL modem to your Belkin Wireless G Router to allow your computers to share your broadband Internet access. The Router also lets you connect music files, printers, and hard drives. You can add up to 32 computers to your wireless network with additional notebook and desktop adapters.

Here's what you need
The Wireless G Router is the central connection point of your wireless network. Position your Belkin Router between your cable or DSL modem and your computer to start sharing your broadband Internet access.

For Desktop Computers
A Wireless G Desktop Network Card or Wireless G USB Network Adapter connects a desktop computer to your Wireless Router to establish a wireless network. Note: You must first have a Wireless Router to establish a wireless network.

For Laptop Computers
A Wireless G Notebook Network Card connects a notebook computer to your Wireless Router to establish a wireless network. Note: You must first have a Wireless Router to establish a wireless network.

NOTE: If you currently have a computer that is directly connected to the modem, you may not need an additional wireless card/adaptor for that computer.

The Wireless G Router implements 802.11g technology that is up to 54% faster than standard 802.11b products. 802.11g technology is ideal for homes and offices that require faster networking speeds to allow for uninterrupted Internet and file sharing. To gain even faster networking speeds, look for Belkin High-Speed Mode 802.11b networks—and up to 35% faster than 802.11g networks.

FASTER than 802.11g is
