### Rack Mount

The GLI 1000 unit can be mounted to the rear of a flat 2U rack panel (also a 1U rack panel for the 2RCA and 2BNC models) or the front of a recessed rack panel (not shown) using four 6-32 x 3/8 screws.
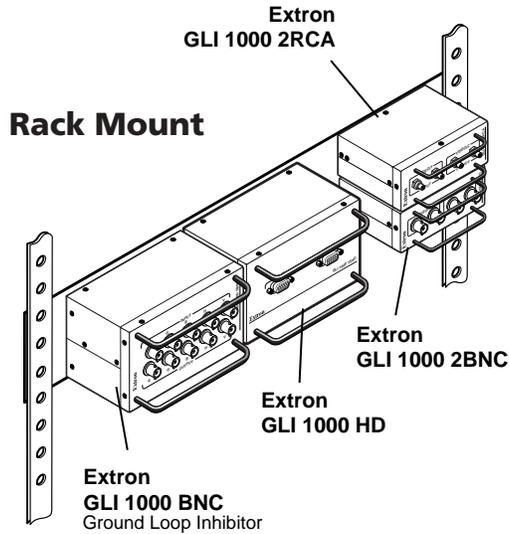

### Projector Mount

Secure the optional mounting bracket to the GLI 1000 using the four #8 machine screws already installed in the side of the GLI. Secure the GLI to the projector mount by inserting the mounting bolt through the slotted hole in the bracket. (See figure on reverse.)

### Surface Mount

Secure both optional mounting brackets to the GLI 1000 using the eight #8 machine screws already installed in the sides of the GLI. Drill four 3/32" pilot holes, 1/4" deep in the mounting surface. Secure the GLI to the surface with four #8 wood screws. (See figure on reverse.)
