

P5090 Telephone Recorder

With LCD Information Center and Caller ID

At home or in the office, a perfect record every time. The Telephone Recorder with LCD Information Center and Caller ID captures every detail of your telephone conversation, recording both sides with crystal clear clarity. A built in LCD panel displays incoming and outgoing telephone numbers, the caller's name, and the time and date of each call. Information is stored on cassette, and is displayed again upon reviewing the tape. The unit begins recording automatically when the phone is in use, or can be manual enabled to start recording silently at any time without "clicks" on the line. Record entire conversations, or program the unit to record only the first portion of each call. Slow speed mode permits over five hours of recording with standard C-120 cassettes. Compatible with single and multi-line phones, the Telephone Recorder with LCD Information Center and Caller ID is equipped with an optional voice-control mode that eliminates silent periods for maximum recording time. Businessmen, journalists, lawyers and other professionals can finally obtain complete records of their phone conversations.

1. This feature requires Caller ID service as provided by telephone company.
2. Requires name and number Caller ID service.

It is the user's responsibility to ensure that conversations are only recorded in accordance with the law of the jurisdiction where the equipment is utilized.
