## **FCC STATEMENT**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference.
- 2) This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

## **CE Mark Warning**

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

# Package Contents

The following items should be found in your package:

- One TD-8817B ADSL2+ Modem Router
- One Power Adapter for TD-8817B ADSL2+ Modem Router
- Quick Installation Guide
- One RJ45 cable
- One USB cable
- Two RJ11 cables
- One ADSL splitter
- One Resource CD , including:
  - This User Guide
  - USB Driver
  - Other Helpful Information

 **Note:**

Make sure that the package contains the above items. If any of the listed items are damaged or missing, please contact your distributor.

# Chapter 1. Introduction

Thank you for choosing the **TD-8817B ADSL2+ Modem Router**.

## 1.1 Product Overview

The device is designed to provide a simple and cost-effective ADSL Internet connection for a private Ethernet network.

TD-8817B connects to an Ethernet LAN or computers via standard Ethernet ports. The ADSL connection is made using ordinary telephone line with standard connectors. Multiple workstations can be networked and connected to the Internet using a single Wide Area Network (WAN) interface and single global IP address. The advanced security enhancements, **IP/MAC Filter**, **Application Filter** and **URL Filter** can help to protect your network from potentially devastating intrusions by malicious agents from the outside of your network.

**Quick Start** of the Web-based Utility is supplied and friendly help messages are provided for the configuration. Network and Router management is done through the Web-based Utility which can be accessed through local Ethernet using any web browser.

### ADSL

TD-8817B supports full-rate ADSL2+ connectivity conforming to the ITU and ANSI specifications. In addition to the basic DMT physical layer functions, the ADSL2+ PHY supports dual latency ADSL2+ framing (fast and interleaved) and the I.432 ATM Physical Layer.

## 1.2 Main Features

- 1 10/100M RJ-45 LAN ports (Auto MDI/MDIX), one RJ11 port, one USB 1.1 port.
- Downstream data rates up to 24Mbps, upstream data rates up to 3.5Mbps (With Annex M enabled).
- Supports long transfers, the max line length can reach to 6.5Km.
- Supports remote configuration and management through SNMP and CWMP.
- Supports PPPoE, it allows connecting the internet on demand and disconnecting from the Internet when idle.
- Quick response semi-conductive surge protection circuit, provides reliable ESD and surge-protect function.
- High speed and asymmetrical data transmit mode, provides safe and exclusive bandwidth.
- Supports All ADSL industrial standards.
- Compatible with all mainstream DSLAM (CO).
- Provides integrated access of internet and route function which face to SOHO user.

- Real-time Configuration and device monitoring.
- Supports Multiple PVC (Permanent Virtual Circuit).
- Built-in DHCP server.
- Built-in firewall, supports IP/MAC filter, Application filter and URL filter.
- Supports Virtual Server, DMZ host and IP Address Mapping.
- Supports Dynamic DNS, UPnP and Static Routing.
- Supports system log and flow Statistics.
- Supports firmware upgrade and Web management.

### **1.3 Conventions**

The Router or device mentioned in this User Guide stands for TD-8817B without any explanations.

Parameters provided in the pictures are just references for setting up the product, which may differ from the actual situation.

## Chapter 2. Hardware Installation

### 2.1 The Front Panel

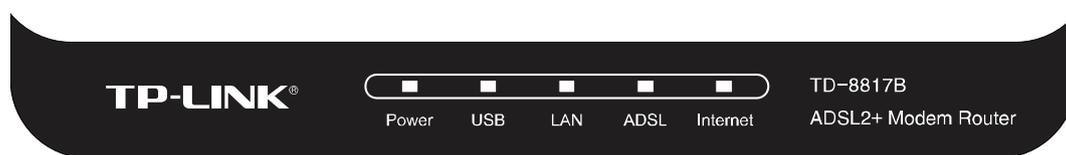

Figure 2-1

The LEDs are located on the front panel, they indicate the device's working status. For details, please refer to LED Explanation.

#### LED Explanation:

LED	Status	Indication
Power	On	Power is on.
	Off	Power is off.
USB	On	There is a successful connection on USB port but no activity.
	Flash	Data is being transferred over the USB connection.
	Off	There is no connection on USB port or the connection is abnormal.
LAN	On	There is a successful connection on LAN port but no activity.
	Flash	Data is being transferred over LAN port.
	Off	There is no connection on LAN port or the connection is abnormal.
ADSL	On	The LINE port is linked up.
	Flash	The ADSL negotiation is in progress.
	Off	The LINE port is linked down.
Internet	On	A successful PPP connection has been built.
	Flash	Data is being transferred over the Internet on PPP mode.
	Off	There is no successful PPP connection or the Router works on Bridge mode.

## 2.2 The Back Panel

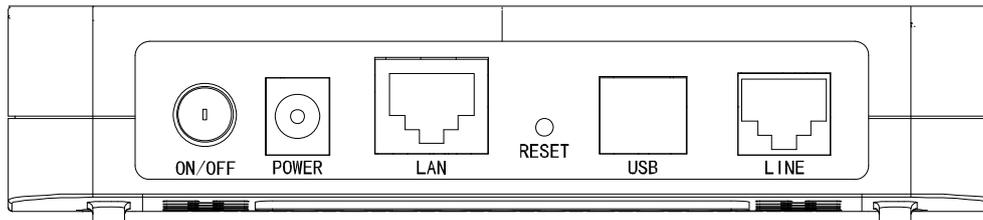

Figure 2-2

- ON/OFF: The switch for the power.
- POWER: The Power plug is where you will connect the power adapter.
- LAN: Through the port, you can connect the Router to your PC or the other Ethernet network devices.
- RESET: There are two ways to reset the Router's factory defaults.
 

**Method one:** With the Router powered on, use a pin to press and hold the Reset button (about 5 seconds) until the SYS LED becomes quick-flash from slow-flash. And then release the button and wait the router to reboot to its factory default settings.

**Method two:** Restore the default setting from “Maintenance-SysRestart” of the Router's Web-based Utility.
- USB: Connect with your computer's USB interface
- LINE: Through the port, you can connect the Router with the telephone.

## 2.3 Installation Environment

- The Product should not be located where it will be exposed to moisture or excessive heat.
- Place the Router in a location where it can be connected to the various devices as well as to a power source.
- Make sure the cables and power cord are placed safely out of the way so they do not create a tripping hazard.
- The Router can be placed on a shelf or desktop.

## 2.4 Hardware installation procedures

The procedure to install the Router can be described in the following steps:

**First Step:** Connect the Modem port of Splitter with the LINE port of the Router by telephone line.

**Second Step:** Connect category 5 cable with RJ45 jacks to Router's LAN port and your computer's NIC. Or connect USB cable to ADSL2+ Router's USB port and your computer's USB interface. ( When you connect your PC to the Router through the USB port, please install the USB driver first. For the detailed operation please refer to “3.2 USB Configuration” in User Guide.)

**Third Step:** Plug one end of the provided Power Adapter into the Power jack on the Router and the other end to a standard electrical outlet.

**Last Step:** Check the line connection to see if everything is ready. Power up finally.

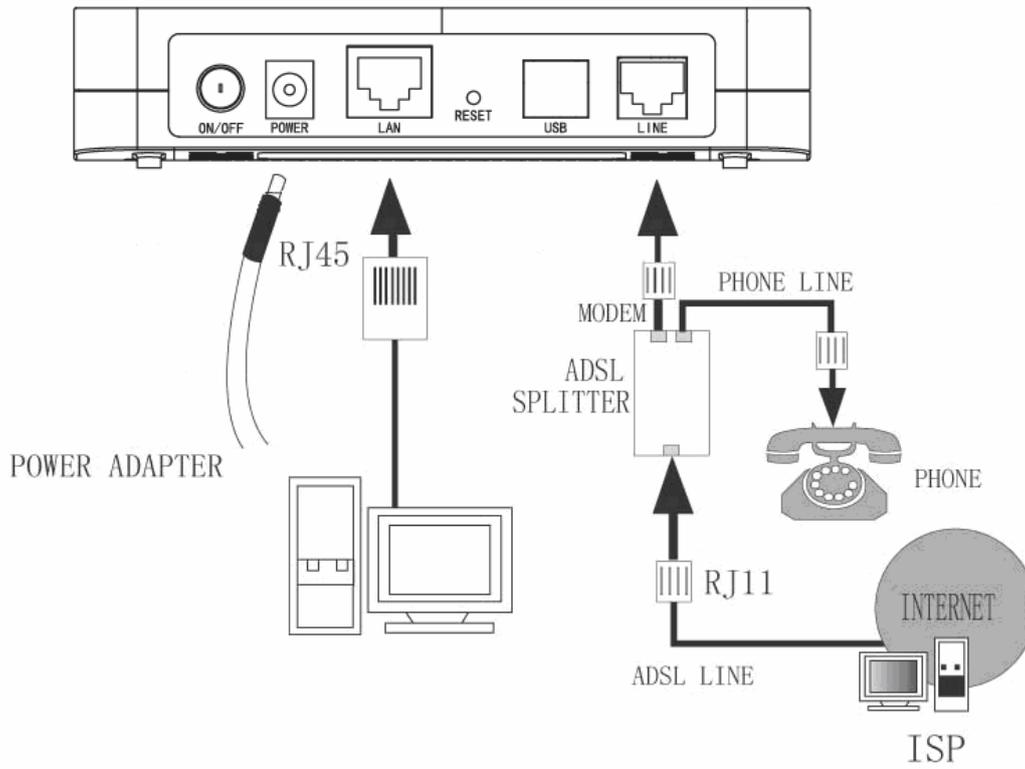

Figure 2-3

## Chapter 3. Quick Installation Guide

### 3.1 Configure PC

After you directly connect your PC to the TD-8817B or connect your adapter to a Hub/Switch which has connected to the Router, you need to configure your PC's IP address. Follow the steps below to configure it.

**Step 1:** Click the **Start** menu on your desktop, right click **My Network Places**, and then select **Properties** (shown in Figure 3-1).

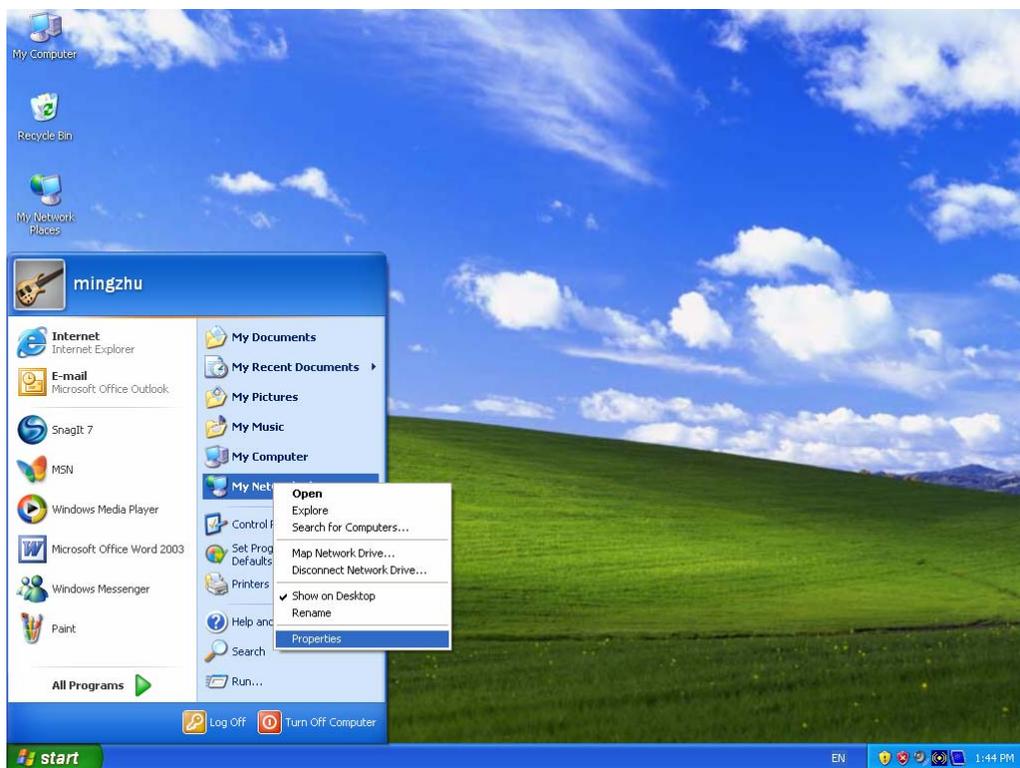

Figure 3-1

**Step 2:** Right click **Local Area Connection (LAN)**, and then select **Properties**.

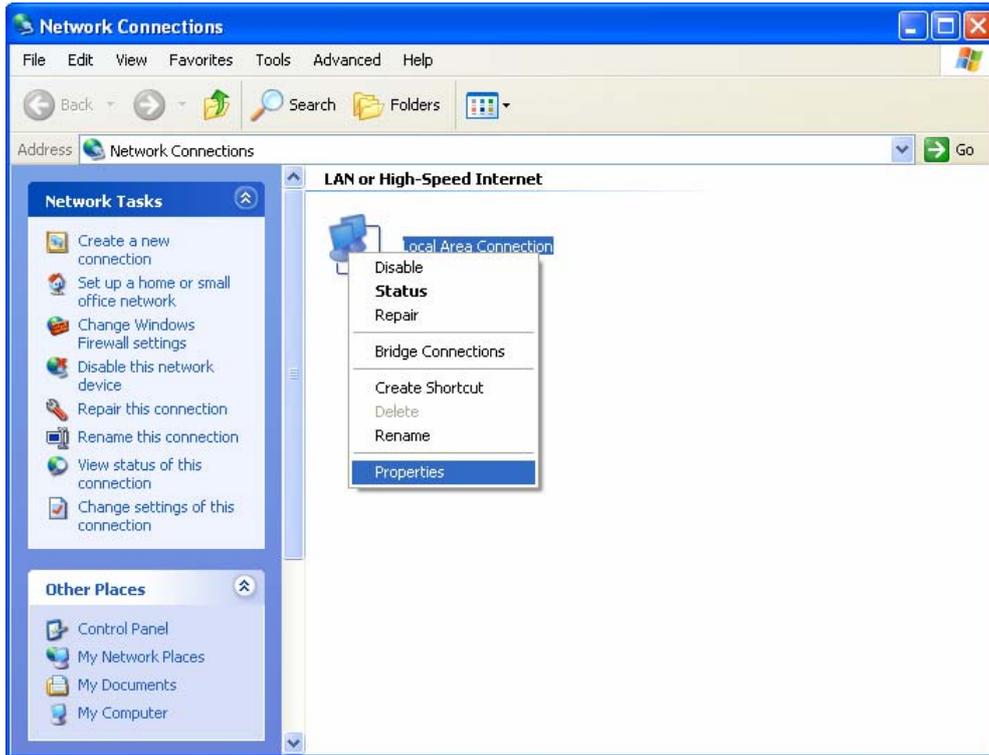

Figure 3-2

**Step 3:** Select **General** tab, highlight Internet Protocol (TCP/IP), and then click the **Properties** button.

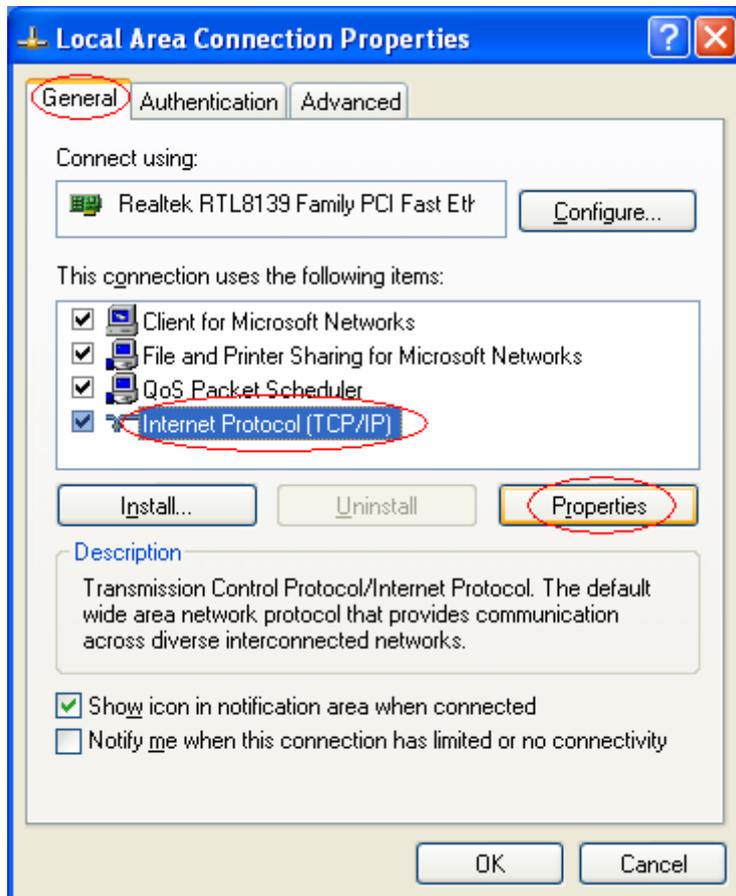

Figure 3-3

**Step 4:** Configure the IP address as Figure 3-4 shows. After that, click **OK**.

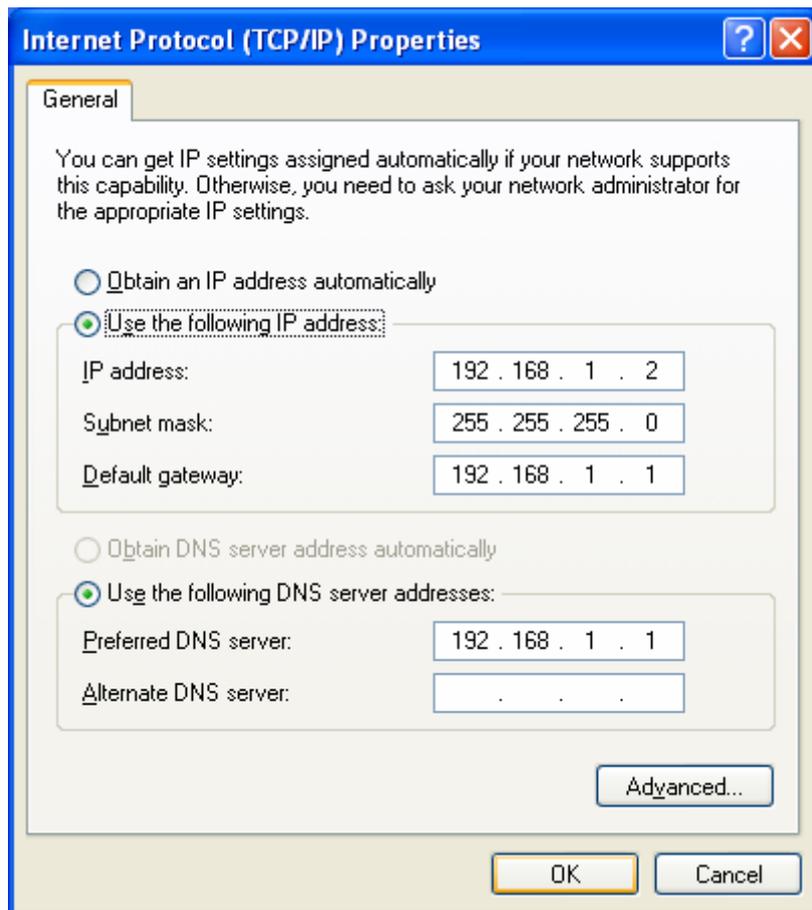

Figure 3-4

**Note:**

You can configure the PC to get an IP address automatically, select “Obtain an IP address automatically” and “Obtain DNS server address automatically” in the screen above.

Now, you can run the Ping command in the command prompt to verify the network connection. Please click the **Start** menu on your desktop, select **run** tab, type **cmd** or **command** in the field and press **Enter**. To continue, please type *ping 192.168.1.1* on the following appeared command prompt screen and then press **Enter**.

If the result displayed is similar to the screen below, the connection between your PC and the Router has been established.

```
Pinging 192.168.1.1 with 32 bytes of data:
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

Figure 3-5

If the result displayed is similar to the screen shown below, it means that your PC has not connected to the Router.

```
Pinging 192.168.1.1 with 32 bytes of data:

Request timed out.
Request timed out.
Request timed out.
Request timed out.

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

Figure 3-6

You can check it following the steps below:

**1) Is the connection between your PC and the Router correct?**

The LEDs of LAN port which you link to the device and the LEDs on your PC's adapter should be lit.

**2) Is the TCP/IP configuration for your PC correct?**

If the Router's IP address is 192.168.1.1, your PC's IP address must be within the range of 192.168.1.2 ~ 192.168.1.254.

## 3.2 USB Configuration

If you use the USB interface, first, you must install the USB's driver to the computer. You can obtain the drivers from the provided CD, or download from our website. (<http://www.tp-link.com>)

### USB Drive installation procedures

**Step 1:** Please connect your PC to the Router through the USB port at first, and then insert the provided CD into your CD-ROM drive. The autorun.exe will automatically run and click **Browse CD** to read the files on the CD. Click the file **TD-8817B>USB Driver** and select the USB driver type according to the operating system of your computer to start installation.

**Step 2:** Soon, Figure 3-7 will display after a moment. Click **Next** to continue.

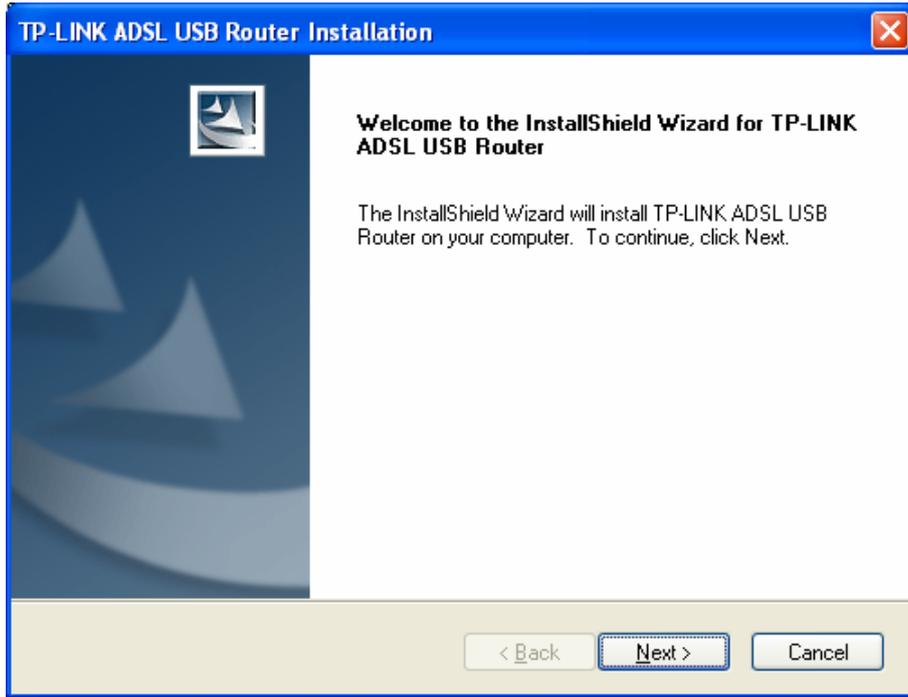

Figure 3-7

**Step 3:** You will see Figure 3-8 as follow, please wait a moment.

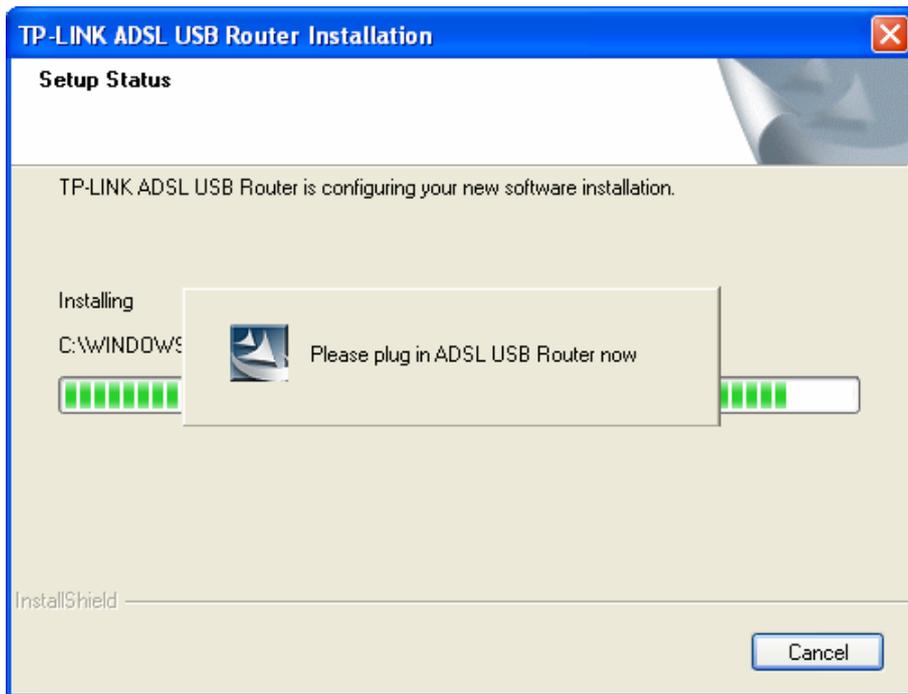

Figure 3-8

**Step 4:** After that, you will see Figure 3-9. Click Finish to complete the installation.

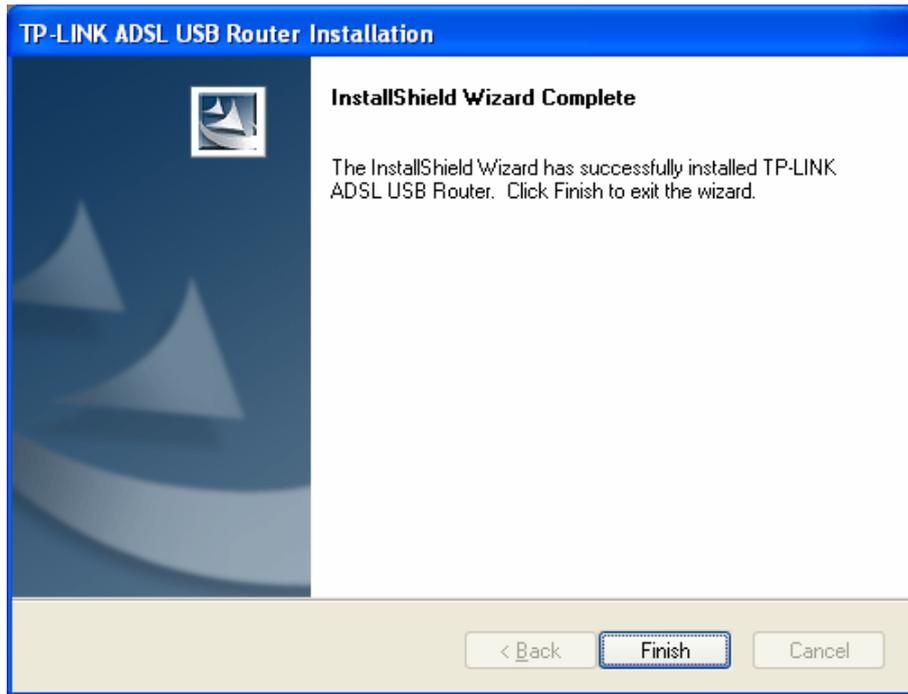

Figure 3-9

 **Note:**

- 1) All of the above settings are under windows XP.
- 2) If you want to pull out the USB device you must disconnect the network of USB first.
- 3) In the Vista operating system, maybe the “Unknown Device” screen will pop up when you insert the USB cable of the Router to a computer, please just unplug the USB cable and try again.

### 3.3 Login

Once your host PC is properly configured, please proceed as follows to use the Web-based Utility: Start your web browser and type the private IP address of the Router in the URL field: **192.168.1.1**.

Address	192.168.1.1
---------	-------------

After that, you will see the screen shown below, enter the default User Name **admin** and the default Password **admin**, and then click **OK** to access to the **Quick Setup** screen. You can follow the steps below to complete the Quick Setup.

Figure 3-10

**Step 1:** Select the **Quick Start** tab, then click **RUN WIZARD**, and you will see Figure 3-11. Click the **NEXT** button.

### Quick Start

The Wizard will guide you through these three quick steps. Begin by clicking on **NEXT**.

Step 1. Choose your time zone

Step 2. Set your Internet connection

Step 3. Save settings of this ADSL Router

Figure 3-11

**Step 2:** Configure the time for the Router, and then click the **NEXT** button.

### Quick Start - Time Zone

Select the appropriate time zone for your location and click **NEXT** to continue.

Figure 3-12

**Step 3:** Select the connection type to connect to the ISP (We select **PPPoE/PPPoA** mode for example here), and then click the **NEXT** button.

### Quick Start - ISP Connection Type

Select the Internet connection type to connect to your ISP. Click **NEXT** to continue.

- Dynamic IP Address Choose this option to obtain a IP address automatically from your ISP.
- Static IP Address Choose this option to set static IP information provided to you by your ISP.
- PPPoE/PPPoA Choose this option if your ISP uses PPPoE/PPPoA. (For most DSL users)
- Bridge Mode Choose this option if your ISP uses Bridge Mode.

BACK NEXT EXIT

Figure 3-13

**Step 4:** Configure the following options provided by your ISP: **Username**, **Password**, **VPI**, **VCI** and **Connection Type**. Then click **NEXT**.

### Quick Start - PPPoE/PPPoA

Enter the PPPoE/PPPoA information provided to you by your ISP. Click **NEXT** to continue.

Username:

Password:

VPI:  (0~255)

VCI:  (1~65535)

Connection Type:  ▼

BACK NEXT EXIT

Figure 3-14

**Step 5:** Click **NEXT** to finish the Quick Start.

### Quick Start Complete !!

The Setup Wizard has completed. Click on **BACK** to modify changes or mistakes. Click **NEXT** to save the current settings.

BACK NEXT EXIT

Figure 3-15

## Chapter 4. Software Configuration

This User Guide recommends using the “Quick Installation Guide” for first-time installation. For advanced users, if you want to know more about this device and make use of its functions adequately, maybe you will get help from this chapter to configure the advanced settings through the Web-based Utility.

After your successful login, you can configure and manage the device. There are main menus on the top of the Web-based Utility, submenus will be available after you click one of the main menus. On the center of the Web-based Utility, there are the detailed configurations or status information. To apply any settings you have altered on the page, please click the **SAVE** button.

### 4.1 Status

Choose “**Status**”, you can see the next submenus: **Device Info**, **System Log** and **Statistics**. Click any of them, and you will be able to configure the corresponding function.

Figure 4-1

#### 4.1.1 Device Info

Choose “**Status**→**Device Info**” menu, and you will be able to view the device information, including LAN, WAN and ADSL. The information will vary depending on the settings of the Router configured on the Interface Setup screen.

The screenshot shows the 'Status' page of the TD-8817B ADSL2+ Modem Router. The top navigation bar includes 'Quick Start', 'Interface Setup', 'Advanced Setup', 'Access Management', 'Maintenance', 'Status', and 'Help'. Below this, there are sub-menus for 'Device Info', 'System Log', and 'Statistics'. The 'Device Info' section is expanded, showing the following information:

- Device Information:** Firmware Version : 6.0.0 Build 101203 Rel.43565, MAC Address : 00:1d:0f:12:34:78
- LAN:** IP Address : 192.168.1.1, Subnet Mask : 255.255.255.0, DHCP Server : Enabled
- WAN:** A table listing PVCs with columns for PVC, VPI/VCI, IP Address, Subnet, GateWay, DNS Server, Encapsulation, and Status.
- ADSL:** ADSL Firmware Version : FwVer:3.13.3.61\_TC3086 HwVer:T14.F7\_6.0, Line State : Down, Modulation : N/A, Annex Mode : N/A. Below this is a table for Downstream and Upstream statistics.

PVC	VPI/VCI	IP Address	Subnet	GateWay	DNS Server	Encapsulation	Status
PVC0	1/32	N/A	N/A	N/A	N/A	Bridge	Down
PVC1	0/33	N/A	N/A	N/A	N/A	Bridge	Down
PVC2	0/35	N/A	N/A	N/A	N/A	Bridge	Down
PVC3	0/100	N/A	N/A	N/A	N/A	Bridge	Down
PVC4	8/35	N/A	N/A	N/A	N/A	Bridge	Down
PVC5	8/48	N/A	N/A	N/A	N/A	Bridge	Down
PVC6	0/38	N/A	N/A	N/A	N/A	Bridge	Down

	Downstream	Upstream
SNR Margin :	N/A	N/A db
Line Attenuation :	N/A	N/A db
Data Rate :	N/A	N/A kbps
Max Rate :	N/A	N/A kbps
POWER :	N/A	N/A dbm
CRC :	N/A	N/A

Figure 4-2

### 4.1.2 System Log

Choose “Status→System Log” menu, and you will be able to query the logs of the Router.

The screenshot displays the router's web management interface. The top navigation bar includes 'Quick Start', 'Interface Setup', 'Advanced Setup', 'Access Management', 'Maintenance', 'Status', and 'Help'. The 'Status' menu is active, and 'System Log' is selected and highlighted with a red circle. Below the navigation, the 'System Log' section is visible, containing a scrollable text area with the following log entries:

```

1/1/2000 0:9:15> Last errorlog repeat 4 Times
1/1/2000 0:9:18> No DNS server available
1/1/2000 0:9:18> Last errorlog repeat 10 Times
1/1/2000 0:9:18> adjTimeTask fail: no server available
1/1/2000 0:9:18> adjtime task pause 60 seconds
1/1/2000 0:9:18> No DNS server available
1/1/2000 0:9:18> Last errorlog repeat 10 Times
1/1/2000 0:9:18> adjTimeTask fail: no server available
1/1/2000 0:9:18> adjtime task pause 60 seconds
1/1/2000 0:9:18> No DNS server available
1/1/2000 0:9:18> Last errorlog repeat 10 Times
1/1/2000 0:9:18> adjTimeTask fail: no server available
1/1/2000 0:9:18> adjtime task pause 1 day
1/1/2000 0:9:29> netMakeChannDial: err=-3001
rn_p=804c8db0
1/1/2000 0:9:49> netMakeChannDial: err=-3001
rn_p=804c8db0
1/1/2000 0:9:51> netMakeChannDial: err=-3001
rn_p=804c8db0
1/1/2000 0:10:2> Last errorlog repeat 1 Times
1/1/2000 0:10:4> netMakeChannDial: err=-3001
rn_p=804c8db0

```

At the bottom of the log area, there are two buttons: 'CLEAR LOG' and 'SAVE LOG'.

Figure 4-3

The Router can keep logs of all traffic. You can query the logs to find what happened to the Router.

Click the **CLEAR LOG** button to clear the logs.

Click the **SAVE LOG** button to save the logs.

### 4.1.3 Statistics

Choose “**Status**→**Statistics**” menu, and you will be able to view the network traffic over Ethernet, and ADSL.

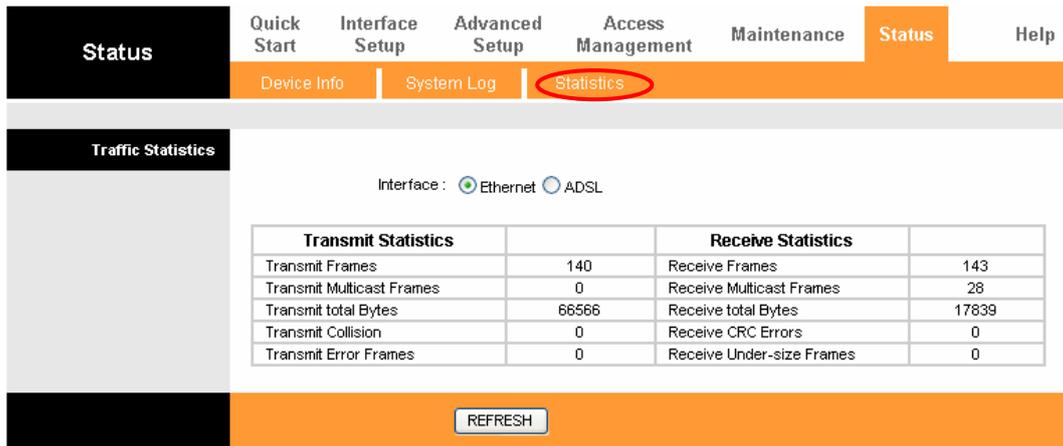

Figure 4-4

- **Interface:** You can select **Ethernet** and **ADSL** to view the corresponding network traffic over different ports.
- Select **Ethernet**, and you will see the statistics table as below.

Interface:  Ethernet  ADSL

Transmit Statistics		Receive Statistics	
Transmit Frames	140	Receive Frames	143
Transmit Multicast Frames	0	Receive Multicast Frames	28
Transmit total Bytes	66566	Receive total Bytes	17839
Transmit Collision	0	Receive CRC Errors	0
Transmit Error Frames	0	Receive Under-size Frames	0

**Statistics Table:**

<b>Transmit Statistics</b>	<b>Transmit Frames</b>	The frames transmitted over the Ethernet port.
	<b>Transmit Multicast Frames</b>	The multicast frames transmitted over the Ethernet port.
	<b>Transmit total Bytes</b>	The total bytes transmitted over the Ethernet port.
	<b>Transmit Collision</b>	The collision occurred over the Ethernet port when data is being transmitted.
	<b>Transmit Error Frames</b>	The error frames over the Ethernet port when data is being transmitted.
<b>Receive Statistics</b>	<b>Receive Frames</b>	The frames received over the Ethernet port.
	<b>Receive Multicast Frames</b>	The multicast frames received over the Ethernet port.
	<b>Receive total Bytes</b>	The total bytes received over the Ethernet port.
	<b>Receive CRC Errors</b>	The CRC errors occurred over the Ethernet port when data is being received.
	<b>Receive Under-size Frames</b>	The Under-size frames received over the Ethernet port.

➤ Select **ADSL**, and you will see the statistics table as below.

Interface:  Ethernet  ADSL

Transmit Statistics		Receive Statistics	
Transmit total PDUs	0	Receive total PDUs	0
Transmit total Error Counts	0	Receive total Error Counts	0

**Statistics Table:**

<b>Transmit Statistics</b>	<b>Transmit total PDUs</b>	The total PDUs transmitted over the ADSL port.
	<b>Transmit total Error Counts</b>	The total errors occurred over the ADSL port when data is being transmitted.
<b>Receive Statistics</b>	<b>Receive total PDUs</b>	The total PDUs transmitted over the ADSL port.
	<b>Receive total Error Counts</b>	The total errors occurred over the ADSL port when data is being received.

## 4.2 Quick Start

Please refer to ["3.3: Login"](#).

## 4.3 Interface Setup

Choose **"Interface Setup"**, you can see the next submenus: **Internet** and **LAN**.

Figure 4-5

Click any of them, and you will be able to configure the corresponding function.

### 4.3.1 Internet

Choose **"Interface Setup→Internet"** menu, you can configure the parameters for WAN ports in the next screen (shown in Figure 4-6).

Interface	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Internet	LAN					
<b>ATM VC</b>	Virtual Circuit: PVC3 <input type="button" value="PVCs Summary"/> Status: <input checked="" type="radio"/> Activated <input type="radio"/> Deactivated VPI: 0 (range: 0~255) VCI: 100 (range: 1~65535)						
<b>QoS</b>	ATM QoS: UBR PCR: 0 cells/second SCR: 0 cells/second MBS: 0 cells						
<b>Encapsulation</b>	ISP: <input type="radio"/> Dynamic IP Address <input type="radio"/> Static IP Address <input checked="" type="radio"/> PPPoA/PPPoE <input type="radio"/> Bridge Mode						
<b>PPPoE/PPPoA</b>	Servicename: servicename Username: username Password: ***** Encapsulation: PPPoE LLC Bridge Interface: <input type="radio"/> Activated <input checked="" type="radio"/> Deactivated						
<b>Connection Setting</b>	Connection: <input checked="" type="radio"/> Always On (Recommended) <input type="radio"/> Connect On-Demand (Close if idle for 15 minutes) <input type="radio"/> Connect Manually TCP MSS Option: TCP MSS(0:default) 0 bytes

<input type="button" value="SAVE"/> <input type="button" value="DELETE"/>							

Figure 4-6

- **ATM VC:** ATM settings are used to connect to your ISP. Your ISP provides VPI (Virtual Path Identifier), VCI (Virtual Channel Identifier) settings to you. In this Device, you can totally setup 8 VCs on different encapsulations, if you apply 8 different virtual circuits from your ISP. You need to activate the VC to take effect. For PVCs management, you can use ATM QoS to setup each PVC traffic line's priority.
  - **Virtual Circuit:** Select the VC number you want to setup, PVC0~PVC7.
  - **Status:** If you want to use a designed VC, you should activate it.

- **VPI:** Identifies the virtual path between endpoints in an ATM network. The valid range is from 0 to 255. Please input the value provided by your ISP.
  - **VCI:** Identifies the virtual channel endpoints in an ATM network. The valid range is from 32 to 65535 (1 to 31 is reserved for well-known protocols). Please input the value provided by your ISP.
  - **PVCs Summary:** Click the button, you can view the summary information about the PVCs.
  - **QoS:** Select the Quality of Service types for this Virtual Circuit, including CBR (Constant Bit Rate), UBR (Unspecified Bit Rate) and VBR (Variable Bit Rate). These QoS types are all controlled by the parameters specified below, including PCR (Peak Cell Rate), SCR (Sustained Cell Rate) and MBS (Maximum Burst Size), please configure them according your needs.
- **Encapsulation:** There are four connection types: Dynamic IP Address, Static IP Address, PPPoA/PPPoE and Bridge Mode. Please choose the designed type that you want to use. After that, you should follow the configuration below to proceed.

### 1. Dynamic IP Address

Select this option if your ISP provides you an IP address automatically. This option is typically used for Cable services. Please enter the Dynamic IP information accordingly.

The screenshot shows a configuration window for Dynamic IP Address. At the top, under 'ISP', 'Dynamic IP Address' is selected with a radio button. Below it are 'Static IP Address', 'PPPoA/PPPoE', and 'Bridge Mode'. A horizontal line separates this from the main configuration area. 'Encapsulation' is a dropdown menu set to '1483 Bridged IP LLC'. 'Bridge Interface' has 'Activated' and 'Deactivated' radio buttons, with 'Deactivated' selected. 'NAT' is a dropdown menu set to 'Enable'. 'Default Route' has 'Yes' and 'No' radio buttons, with 'Yes' selected. 'TCP MTU Option' is 'TCP MTU(default:1500)' followed by a text box containing '1500' and the word 'bytes'. 'Dynamic Route' is a dropdown menu set to 'RIP2-B' and 'Direction' is a dropdown menu set to 'Both'. 'Multicast' is a dropdown menu set to 'Disabled'. 'MAC Spoofing' has 'Enabled' and 'Disabled' radio buttons, with 'Disabled' selected. Below this is a text box containing the MAC address '00:00:00:00:00:00'.

Figure 4-7

- **Encapsulation:** Select the encapsulation mode for the Dynamic IP Address, you can leave it default.
- **Bridge Interface:** Activate the option, the Router can also work in Bridge mode.
- **NAT:** Select this option to Enable/Disable the NAT (Network Address Translation) function for this VC. The NAT function can be activated or deactivated per PVC basis.
- **Default Route:** If enable this function, the current PVC will be considered as the default gateway to internet from this device.
- **TCP MTU Option:** Enter the TCP MTU as your desire.

- **Dynamic Route:** Select this option to specify the RIP (Routing Information protocol) version for WAN interface, including **RIP1**, **RIP2-B** and **RIP2-M**. RIP2-B and RIP2-M are both sent in RIP2 format, the difference is that RIP2-M using Multicast, while RIP2-B using Broadcast format.
  - **Direction:** Select this option to specify the RIP direction. **None** is for disabling the RIP function. **Both** means the ADSL Router will periodically send routing information and accept routing information, and then incorporate them into routing table. **IN only** means the ADLS router will only accept but will not send RIP packet. **OUT only** means the ADLS router will only send but will not accept RIP packet.
- **Multicast:** Select IGMP version, or disable the function. IGMP (Internet Group Multicast Protocol) is a session-layer protocol used to establish membership in a multicast group. The ADSL ATU-R supports both IGMP version 1 (**IGMP v1**) and **IGMP v2**. Select “Disabled” to disable it.

**2. Static IP Address**

Select this option if your ISP provides static IP information to you. You should set static IP address, IP subnet mask, and gateway address in the screen below (shown in Figure 4-8).

ISP :  Dynamic IP Address  
 Static IP Address  
 PPPoA/PPPoE  
 Bridge Mode

---

Encapsulation : 1483 Bridged IP LLC

Static IP Address : 0.0.0.0

IP Subnet Mask : 0.0.0.0

Gateway : 0.0.0.0

Bridge Interface :  Activated  Deactivated

NAT : Enable

Default Route :  Yes  No

TCP MTU Option : TCP MTU(default:1500) 1500 bytes

Dynamic Route : RIP2-B      Direction : Both

Multicast : Disabled

MAC Spoofing :  Enabled  Disabled  
 00:00:00:00:00:00

Figure 4-8

**Note:**

Each IP address entered in the fields must be in the appropriate IP form, which is four IP octets separated by a dot (x.x.x.x), such as 192.168.1.100. The Router will not accept the IP address if it is not in this format.

### 3. PPPoA/PPPoE

Select this option if your ISP requires you to use a PPPoE connection. This option is typically used for DSL services. Select Dynamic PPPoE to obtain an IP address automatically for your PPPoE connection. Select Static PPPoE to use a static IP address for your PPPoE connection. Please enter the information accordingly.

The screenshot shows a configuration window for PPPoA/PPPoE. It is divided into several sections:

- ISP Selection:** Radio buttons for Dynamic IP Address, Static IP Address, **PPPoA/PPPoE** (selected), and Bridge Mode.
- Service Information:** Text boxes for Servicename (servicename), Username (username), and Password (masked with dots). A dropdown menu for Encapsulation is set to PPPoE LLC. Bridge Interface is set to Deactivated.
- Connection Mode:** Radio buttons for Always On (Recommended) (selected), Connect On-Demand (Close if idle for 0 minutes), and Connect Manually. A TCP MSS Option is set to 0 bytes.
- IP Addressing:** Radio buttons for Static and **Dynamic** (selected). Text boxes for Static IP Address, IP Subnet Mask, and Gateway are all set to 0.0.0.0. NAT is set to Enable. Default Route is set to Yes. TCP MTU Option is set to 1480 bytes. Dynamic Route is set to RIP1 and Direction is set to Both. Multicast is set to Disabled. MAC Spoofing is set to Disabled with a text box containing 00:00:00:00:00:00.

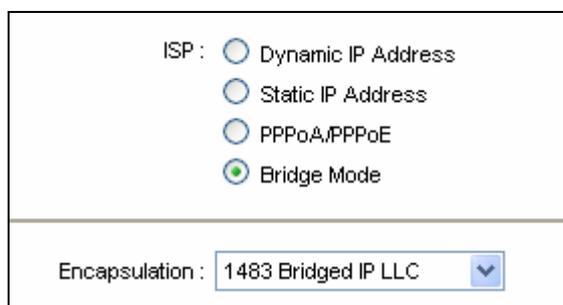

Figure 4-9

- **Service name:** Specify a name for the PPPoE/PPPoA connection for recognition.
- **Username:** Enter your username for your PPPoE/PPPoA connection to identify and verify your account to the ISP.
- **Password:** Enter your password for your PPPoE/PPPoA connection.
- **Encapsulation:** For both PPPoE/PPPoA connection, you need to specify the type of Multiplexing, either LLC or VC Mux.
- **Bridge Interface:** Activate the option, the Router can also work in Bridge mode.

- **Connection:** For PPPoE/PPPoA connection, you can select **Always on** or **Connect on-Demand** or **Connect Manually**. Connect on demand is dependent on the traffic. If there is no traffic (or **Idle** for a pre-specified period of time), the connection will tear down automatically. And once there is traffic send or receive, the connection will be automatically on.
- **Static/Dynamic IP Address:** For PPPoE/PPPoA connection, you need to specify the public IP address for this ADSL Router. The IP address can be either dynamically (via DHCP) or given IP address provided by your ISP. For Static IP, you need to specify the IP address, Subnet Mask and Gateway IP address.
- **Default Route:** You should select **Yes** to configure the PVC as the default gateway to internet from this device.
- **MAC Spoofing:** MAC Spoofing feature allows you to change the assigned MAC address of the ADSL Router to a different one, which may allow the bypassing of access control lists on servers either hiding a computer on a network or allowing it to impersonate another computer. You can select **Enable** and specify a MAC Address for the Router here, or keep the default setting as **Disable**.

#### 4. Bridge Mode

If you select this type of connection, the modem can be configured to act as a bridging device between your LAN and your ISP. Bridges are devices that enable two or more networks to communicate as if they are two segments of the same physical LAN.

The screenshot shows a configuration window for the ISP. It contains four radio button options under the label 'ISP':

- Dynamic IP Address
- Static IP Address
- PPPoA/PPPoE
- Bridge Mode

Below these options is a section for 'Encapsulation' with a dropdown menu currently set to '1483 Bridged IP LLC'.

Figure 4-10

#### Note:

After you finish the Internet configuration, please click **SAVE** to make the settings take effect.

#### 4.3.2 LAN

Choose “**Interface Setup**→**LAN**” menu, and you will see the LAN screen (shown in Figure 4-11). Please configure the parameters for LAN ports according to the descriptions below.

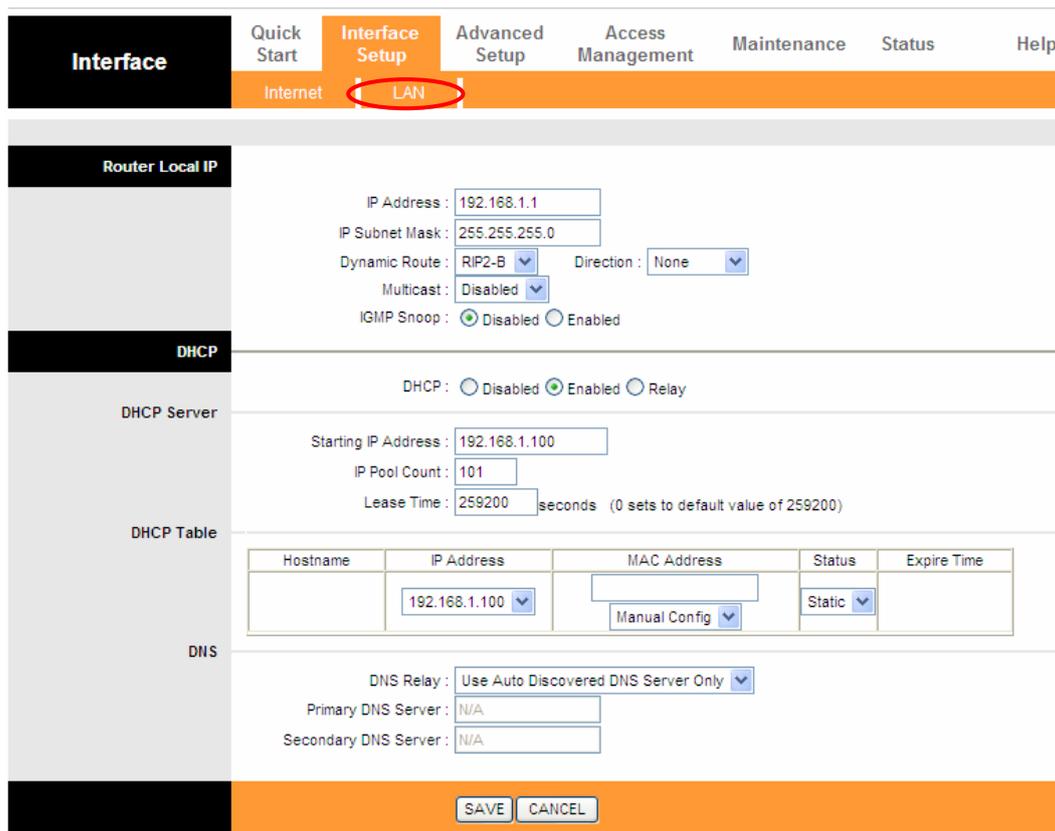

Figure 4-11

➤ **Router Local IP:** These are the IP settings of the LAN interface for the device. These settings may be referred to as Private settings. You may change the LAN IP address if needed. The LAN IP address is private to your internal network and cannot be seen on the Internet.

- **IP Address:** Enter the Router’s local IP Address, then you can access to the Web-based Utility via the IP Address, the default value is 192.168.1.1.
- **IP Subnet Mask:** Enter the Router’s Subnet Mask, the default value is 255.255.255.0.
- **Dynamic Route:** Select this option to specify the RIP (Routing Information protocol) version for LAN interface, including **RIP1**, **RIP2-B** and **RIP2-M**. RIP2-B and RIP2-M are both sent in RIP2 format, the difference is that RIP2-M using Multicast, while RIP2-B using Broadcast format.
- **Direction:** Select this option to specify the RIP direction. **None** is for disabling the RIP function. **Both** means the ADSL Router will periodically send routing information and accept routing information, and then incorporate them into routing table. **IN only** means the ADLS router will only accept but will not send RIP packet. **OUT only** means the ADLS router will only send but will not accept RIP packet.
- **Multicast:** Select IGMP version, or disable the function. IGMP (Internet Group Multicast Protocol) is a session-layer protocol used to establish membership in a multicast group. The ADSL ATU-R supports both IGMP version 1 (**IGMP v1**) and **IGMP v2**. Select “Disabled” to disable it.
- **IGMP Snoop:** Enable the IGMP Snoop function if you need.

- **DHCP Server:** Select **Enabled**, then you will see the screen below (shown in Figure 4-12). The Router will work as a DHCP Server, it becomes the default gateway for DHCP client connected to it. DHCP stands for Dynamic Host Control Protocol. The DHCP Server gives out IP addresses when a device is booting up and request an IP address to be logged on to the network. That device must be set as a DHCP client to obtain the IP address automatically. By default, the DHCP Server is enabled. The DHCP address pool contains the range of the IP address that will automatically be assigned to the clients on the network.

Figure 4-12

- **Starting IP Address:** Enter the starting IP address for the DHCP server's IP assignment. Because the default IP address for the Router is 192.168.1.1, the default Start IP Address is **192.168.1.100**, and the Start IP Address must be 192.168.1.100 or greater, but smaller than 192.168.1.254.
- **IP Pool Count:** The max user pool size.
- **Lease Time:** The length of time for the IP lease. After the dynamic IP address has expired, the user will be automatically assigned a new dynamic IP address. The default is **259200** seconds.
- **DNS Relay:** If you want to disable this feature, you just need to set both Primary and secondary DNS IP to 0.0.0.0. If you want to use DNS relay, you can setup DNS server IP to 192.168.1.1 on their Computer. If not, the device will perform as no DNS relay.
- **Primary DNS Server:** Type in your preferred DNS server.
- **Secondary DNS Server:** Type in your preferred DNS server.
- **Current Pool Summary:** Click the button, you can view the IP addresses that the DHCP Server gives out.

**Note:**

If **Use Auto Discovered DNS Server Only** is selected in DNS Relay, this router will accept the first received DNS assignment from one of the PPPoA, PPPoE or MER/DHCP enabled PVC(s) during the connection establishment. If **Use User Discovered DNS Server Only** is selected in DNS Relay, it is necessary for you to enter the primary and optional secondary DNS server IP addresses. After type in the address, click **SAVE** button to save it and invoke it.

- **DHCP Relay:** Select **Relay**, then you will see the next screen (shown in Figure 4-13), the Router will work as a DHCP Relay. A DHCP relay is a computer that forwards DHCP data between computers that request IP addresses and the DHCP server that assigns the addresses. Each of the device's interfaces can be configured as a DHCP relay. If it is enabled, the DHCP requests from local PCs will forward to the DHCP server runs on WAN side. To have this function working properly, please run on router mode only, disable the DHCP server on the LAN port, and make sure the routing table has the correct routing entry.

Figure 4-13

- **DHCP Server IP for Relay Agent:** Enter the DHCP server IP Address runs on WAN side.

**Note:**

If you select **Disabled**, the DHCP function will not take effect.

## 4.4 Advanced Setup

Choose “**Advanced Setup**”, you can see the next submenus:

Figure 4-14

Click any of them, and you will be able to configure the corresponding function.

### 4.4.1 Firewall

Choose “**Advanced Setup→Firewall**” menu, and you will see the next screen (shown in Figure 4-15).

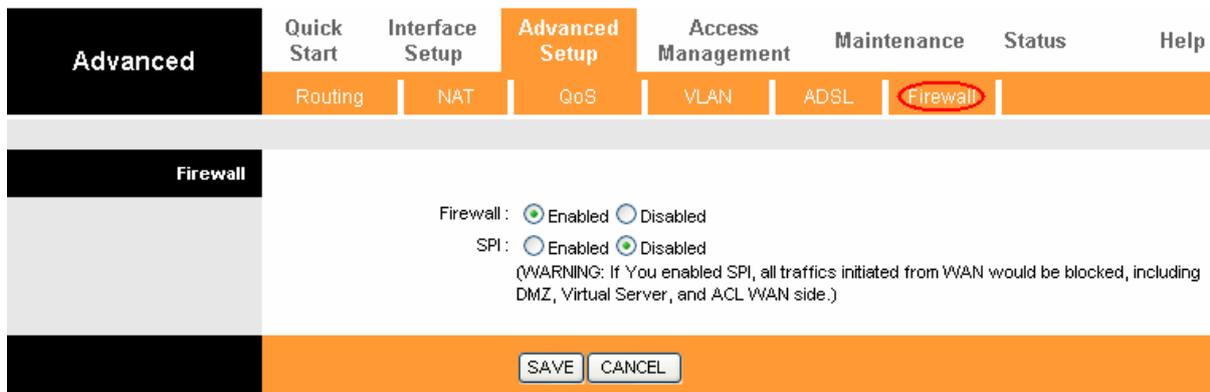

Figure 4-15

- **Firewall:** Select this option can automatically detect and block Denial of Service (DoS) attacks, such as Ping of Death, SYN Flood, Port Scan and Land Attack.
- **SPI:** If you enable SPI, all traffics initiated from WAN would be blocked, including DMZ, Virtual Server, and ACL WAN side.

#### 4.4.2 Routing

Choose “**Advanced Setup**→**Routing**” menu, and you will see the routing information in the next screen (shown in Figure 4-16).

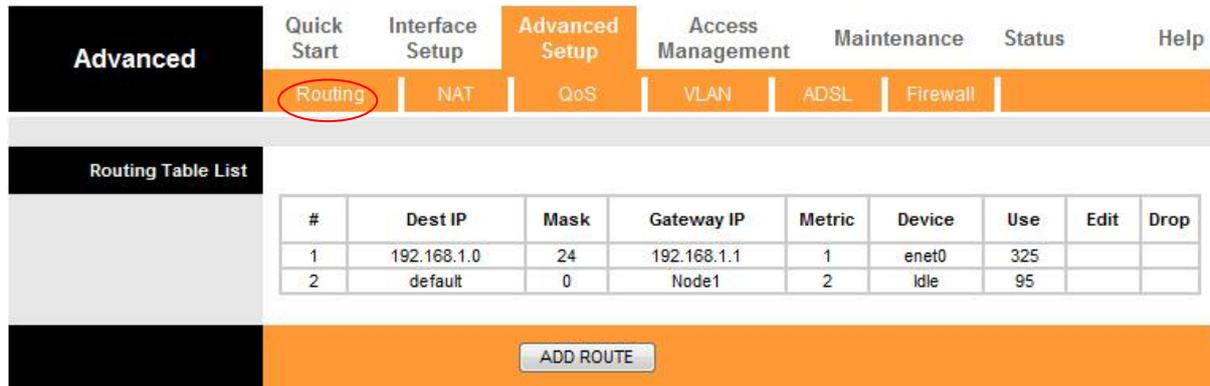

Figure 4-16

Click **ADD ROUTE** button to add a new route in the next screen (shown in Figure 4-17).

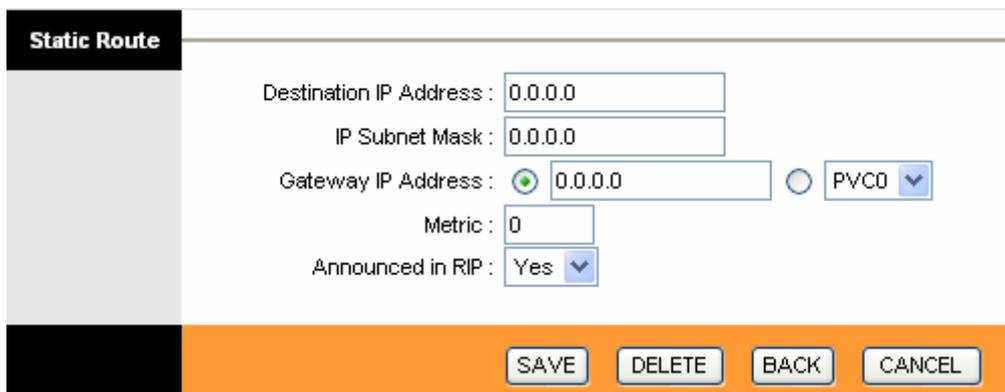

Figure 4-17

- **Destination IP Address:** This parameter specifies the IP network address of the final destination.
- **IP Subnet Mask:** Enter the subnet mask for this destination.
- **Gateway IP Address:** Enter the IP address of the gateway. The gateway is an immediate neighbor of your ADSL Router that will forward the packet to the destination. On the LAN, the gateway must be a router on the same segment as your Router; over Internet (WAN), the gateway must be the IP address of one of the remote nodes.
- **Metric:** Metric represents the "cost" of transmission for routing purposes. IP Routing uses hop count as the measurement of cost, with a minimum of 1 for directly connected networks. Enter a number that approximates the cost for this link. The number need not to be precise, but it must between 1 and 15. In practice, 2 or 3 is usually a good number.

- **Announced in RIP:** This parameter determines if the ADSL router will include the route to this remote node in its RIP broadcasts. If set to Yes, the route to this remote node will be propagated to other hosts through RIP broadcasts. If No, this route is kept private and is not included in RIP broadcasts.

### 4.4.3 NAT

Choose “**Advanced Setup**→**NAT**” menu, you can setup the NAT (Network Address Translation) function for the Router (shown in Figure 4-18).

Figure 4-18

- **Virtual Circuit:** Enter Virtual Circuit Index that you plan to setup for the NAT function.
- **NAT Status:** This field shows the current status of the NAT function for the current VC. You can go to the previous screen (shown in Figure 4-6) to activate the function.
- **Number of IPs;** This field is to specify how many IPs are provided by your ISP for current VC. It can be single IP or multiple IPs. We select Multiple to explain.

#### 👉 Note:

For VCs with single IP, they share the same DMZ and Virtual servers; for VCs with multiple IPs, each VC can set DMZ and Virtual servers. Furthermore, for VCs with multiple IPs, they can define the Address Mapping rules; for VCs with single IP, since they have only one IP, there is no need to individually define the Address Mapping rule.

#### 4.4.3.1. DMZ

Choose “**Advanced Setup**→**NAT**→**DMZ**” in Figure 4-18, you can configure the DMZ host in the next screen. A DMZ (demilitarized zone) is a host between a private local network and the outside public network. It prevents outside users from getting direct access to a server that has company data. Users of the public network outside the company can access to the DMZ host.

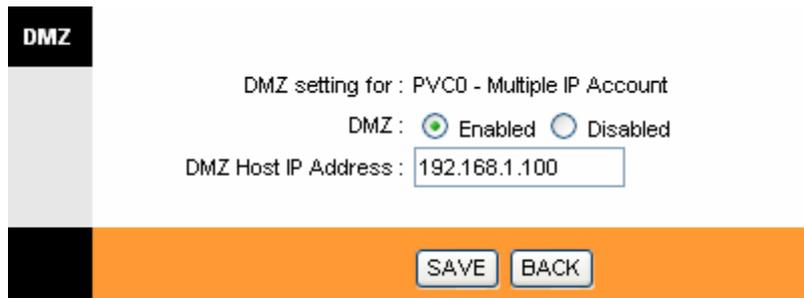

Figure 4-19

- **DMZ Host IP Address:** Enter the specified IP Address for DMZ host on the LAN side.

#### 4.4.3.2. Virtual Server

Choose “**Advanced Setup**→**NAT**→**Virtual Server**” in Figure 4-18, you can configure the Virtual Server in the next screen.

The Virtual Server is the server or server(s) behind NAT (on the LAN), for example, Web server or FTP server, that you can make visible to the outside world even though NAT makes your whole inside network appear as a single machine to the outside world.

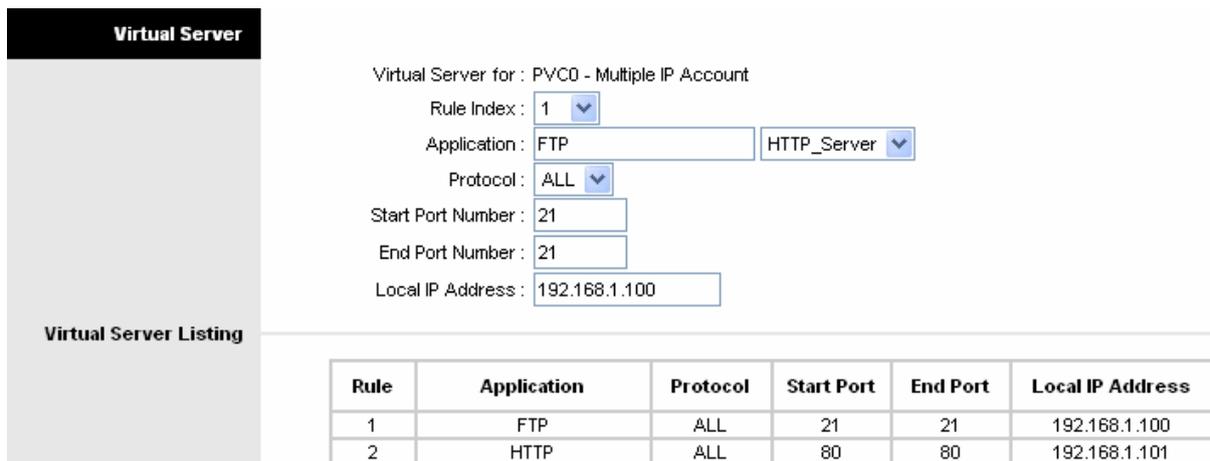

Figure 4-20

- **Rule Index:** The Virtual server rule index for this VC. You can specify 10 rules in maximum. All the VCs with single IP will use the same Virtual Server rules.
- **Start & End port number:** Enter the specific Start and End Port number you want to forward. If it is one port only, you can enter the End port number the same as Start port number. For example, you want to set the FTP Virtual server, you can set the start and end port number to 21.
- **Local IP Address:** Enter the IP Address for the Virtual Server in LAN side.
- **Virtual Server Listing:** This displays the information about the Virtual Servers you establish.

#### To add a virtual server entry:

**Step 1:** Select the “Virtual Circuit” and select “Number of IPs”. (shown in Figure 4-18).

**Note:**

For VCs with single IP, select **Single**; For VCs with multiple IPs, select **Multiple** for the option.

**Step 2:** Select the Rule index for the rule as shown in Figure 4-20.

**Step 3:** Select the application you want from drop-down list, then the protocol and port number will be added to the corresponding field automatically, you only need to configure the IP address for the virtual server; If the application list does not contain the service that you want, please configure the Port number, IP Address and Protocol manually.

**Step 4:** After that, click **SAVE** to make the entry take effect.

**Other operation for the entries is as follow:**

Enter the index of assigned entry, click the **DELETE** button to delete the entry.

Click the **BACK** button to return to the previous screen.

Click the **CANCEL** button to cancel the configuration which is made just now.

**4.4.3.3. IP Address Mapping**

Choose “**Advanced Setup**→**NAT**”, select **Multiple** in **Number of IPs**. Click **IP Address Mapping**, then you can configure the Address Mapping Rule in Figure 4-22. The IP Address Mapping is for those VCs that configured with multiple IPs. The IP Address Mapping rule is per-VC based (only for Multiple IPs’ VCs).

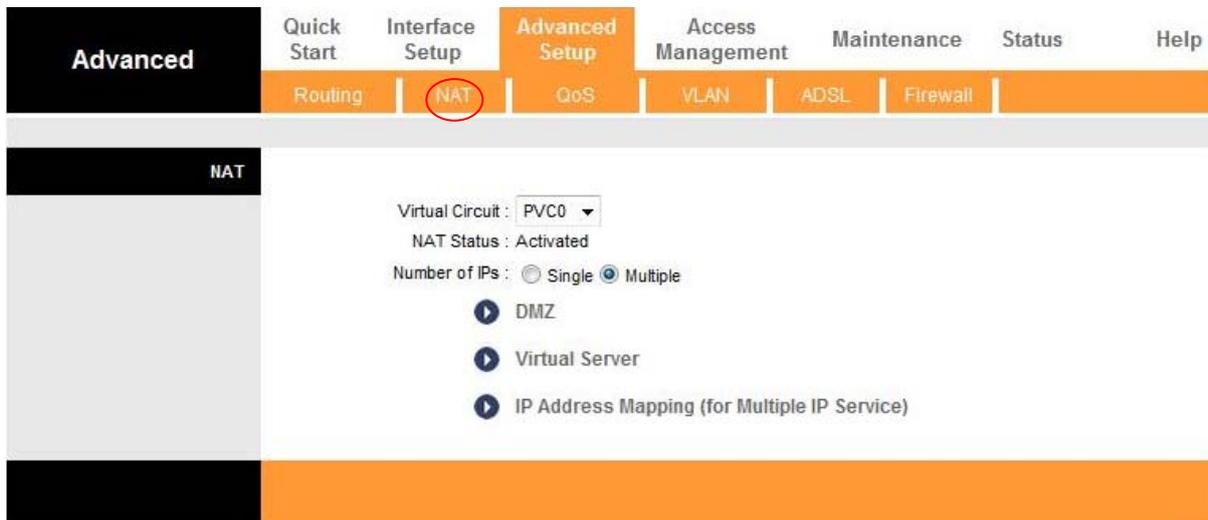

Figure 4-21

IP Address Mapping

---

Address Mapping List

Address Mapping Rule : PVC0

Rule Index : 1

Rule Type : Many-to-Many Overload

Local Start IP : 0.0.0.0 (for all local IPs, enter 0.0.0.0 for Start IP)

Local End IP : 255.255.255.255 (for all local IPs, enter 255.255.255.255 for End IP)

Public Start IP : 61.141.228.32

Public End IP : 61.141.228.254

Rule	Type	Local Start IP	Local End IP	Public Start IP	Public End IP
1	M-M Ov	0.0.0.0	255.255.255.255	61.141.228.32	61.141.228.254

Figure 4-22

- **Rule Index:** Select the Address Mapping Rule index for this VC. You can specify 8 rules in maximum.
- **Rule Type:** There are four types, one-to-one, Many-to-One, Many-to-Many Overload and Many-to-Many No-overload.
- **Local Start & End IP:** Enter the local IP Address you plan to mapped to. Local Start IP is the starting local IP address and Local End IP is the ending local IP address. If the rule is for all local IPs, then the Start IP is 0.0.0.0 and the End IP is 255.255.255.255.
- **Public Start & End IP:** Enter the public IP Address you want to do NAT. Public Start IP is the starting public IP address and Public End IP is the ending public IP address. If you have a dynamic IP, enter 0.0.0.0 as the Public Start IP.
- **Address Mapping List:** This displays the information about the Mapping addresses.

**To add a mapping rule:**

**Step 1:** Select the “Virtual Circuit” and Multiple for the “Number of IPs”. Then select the tab **IP Address Mapping** (shown in Figure 4-21).

**Note:**

**IP Address Mapping** is only available for VCs with Multiple IPs.

**Step 2:** Select the Rule index for the rule as shown in Figure 4-22.

**Step 3:** Select the rule type you want from the drop-down list.

**Step 4:** Enter the local and public IP addresses in the corresponding fields.

**Step 5:** After that, click **SAVE** to make the entry take effect.

**Other operation for the entries is as follow:**

Enter the index of assigned entry, click the **DELETE** button to delete the entry.

Click the **BACK** button to return to the previous screen.

Click the **CANCEL** button to cancel the configuration which is made just now.

**4.4.4 QoS**

Choose “**Advanced Setup→QoS**”, you can configure the QoS in the next screen. QoS helps to prioritize data as it enters your router. By attaching special identification marks or headers to

incoming packets, QoS determines which queue the packets enter, based priority. This is useful when there are certain types of data you want to give higher priority, such as voice data packets give higher priority than Web data packets. This option will provide better service of selected network traffic over various technologies.

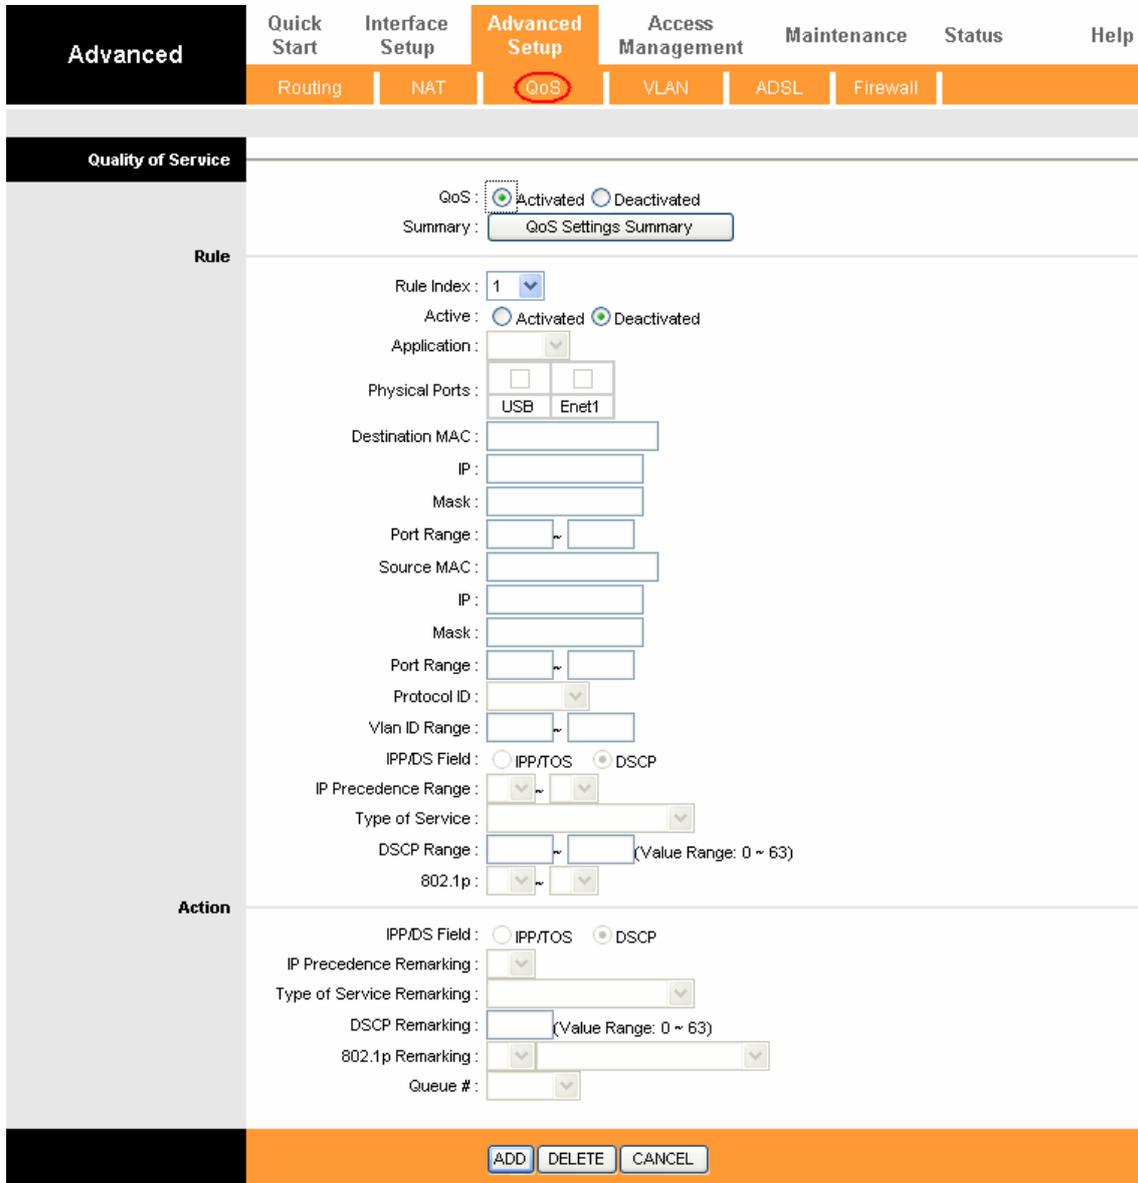

Figure 4-23

- **QoS:** Select this option to Activate/Deactivate the IP QoS on different types (IP ToS and DiffServ).
- **Summary:** Click the button to view the configurations of QoS.
- **Rule:** Configure the rules for QoS. If the traffic complies with the rule, then the Router will take the corresponding action to deal with it.
  - **Rule Index:** Select the index for the rule you want to configure.
  - **Active:** Activate the rule. The rule can take effect only when it is activated.
  - **Application:** Select the application that the rule aimed at.
  - **Physical Ports:** Select the port whose traffic flow are controlled by the rule.

- **Destination MAC & IP & Mask & Port Range:** Enter the IP information about the Destination host for the rule.
- **Source MAC & IP & Mask & Port Range:** Enter the IP information about the Source host for the rule.
- **Protocol ID:** Select one among TCP/UDP, TCP, UDP or ICMP protocols for the application.
- **Vlan ID Range:** Enter the Vlan range, then the rule will be effective to the selected Vlans.
- **IPP/DS Field:** Select the type of the action to assign the priority.

When you select IPP/TOS, you can assign the priority via IP information. IP QoS function is intended to deliver guaranteed as well as differentiated Internet services by giving network resource and usage control to the Network operator.

- **IP Precedence Range:** Enter the IP precedence range that the Router takes to differentiate the traffic.
- **Type of Service:** Select the type of service that the Router takes to deal with the traffic.
- **802.1p:** Select the priority range for the rule.

When you select DSCP, you can assign the priority via DHCP (the header of IP group). It maps the IP group into corresponding service class.

- **DSCP Range:** Enter the DSCP range to differentiate the traffic.
- **802.1p:** Select the priority range for the rule.

➤ **Action:** Configure the action that the Router takes to deal with the traffic which accord with the rule.

- **IPP/DS Field:** Select the type for the action.
- **IP Precedence Remarking:** Select the number to remark the priority for IP precedence.
- **Type of Service Remarking:** Select the type to remark the service.
- **DSCP Remarking:** Enter the number to remark the DSCP priority.
- **802.1p Remarking:** Select the type to remark the 802.1p priority.
- **Queue:** Select the priority type for the action.

#### 4.4.5 VLAN

Choose “**Advanced Setup→VLAN**”, you can activate the VLAN function in the next screen.

Virtual LAN (VLAN) is a group of devices on one or more LANs that are configured so that they can communicate as if they were attached to the same LAN, when in fact they are located on a number of different LAN segments. Because VLANs are based on logical instead of physical connections, it is very flexible for user/host management, bandwidth allocation and resource optimization. There are two types of VLAN as follows:

**Port-Based VLAN:** Each physical switch port is configured with an access list specifying membership in a set of VLANs.

**ATM VLAN:** Using LAN Emulation (LANE) protocol to map Ethernet packets into ATM cells and deliver them to their destination by converting an Ethernet MAC address into an ATM address.

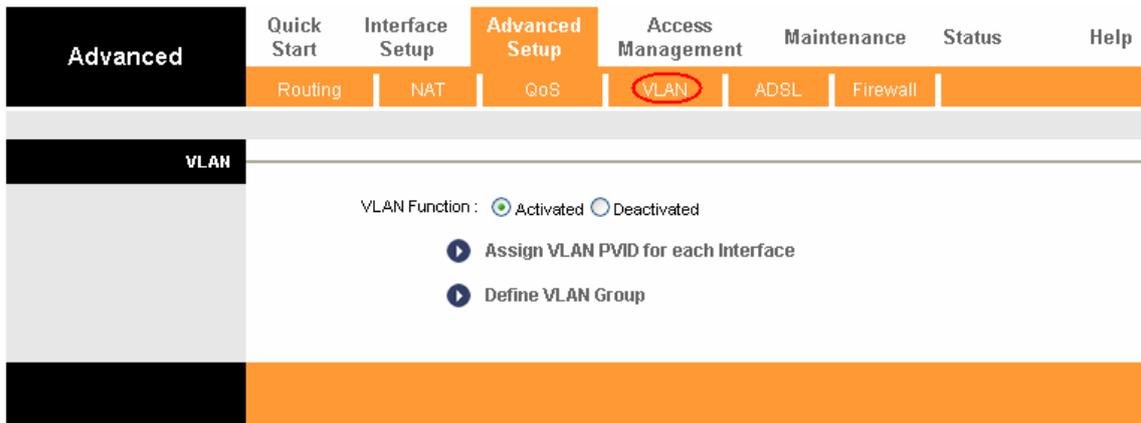

Figure 4-24

### 1. Assign VLAN PVID for each Interface

Click **Assign VLAN PVID for each Interface** in Figure 4-24, you can assign the PVID for each interface in the next screen (shown in Figure 4-25).

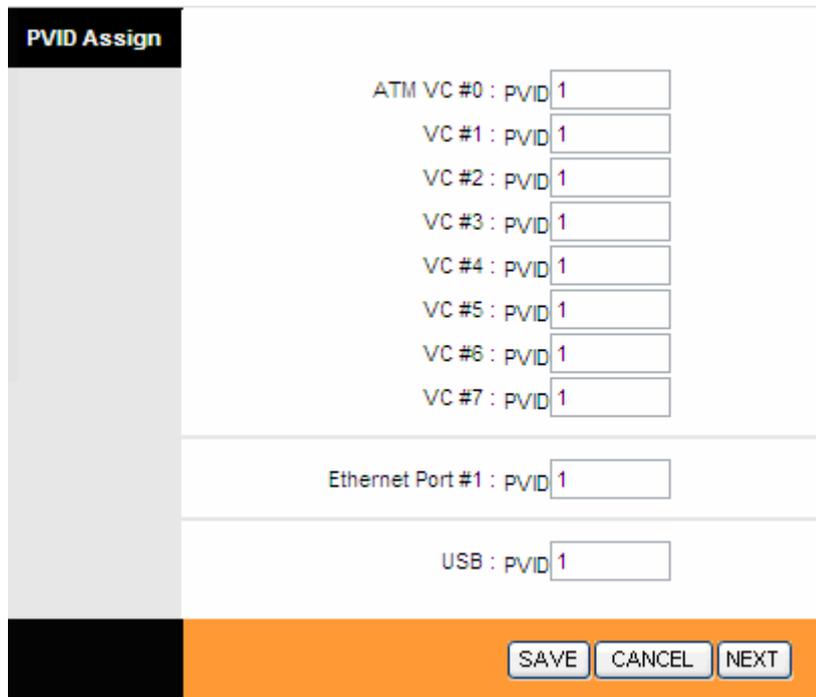

Figure 4-25

- **PVID:** Each physical port has a default VID called PVID (Port VID). PVID is assigned to untagged frames or priority tagged frames (frames with null (0) VID) received on this port.

### 2. Define VLAN Group

Click **Define VLAN Group** in Figure 4-24, you can define VLAN groups in the next screen (shown in Figure 4-26).

VLAN Group Setting

VLAN Index:

Active:  Yes  No

VLAN ID:  (Decimal)

Tagged:

ATM VCs:

Port #	<input checked="" type="checkbox"/>							
0	1	2	3	4	5	6	7	

Tagged:

Ethernet:

Port #	<input checked="" type="checkbox"/>
1	

USB:

Port #	<input checked="" type="checkbox"/>

**VLAN Group Summary**

Group	Active	ID	VLAN Group Ports	VLAN Tagged Ports
1	Yes	1	e1,u,p0,p1,p2,p3,p4,p5,p6,p7	

p:pvc, e:ethernet, u:usb

Figure 4-26

- **VLAN Index:** Select the VLAN index for this VC. You can specify 8 groups in maximum.
- **VLAN ID:** This indicates the VLAN group.
- **ATM VCs:** Select the ATM VCs as members of VLAN, and if you leave the Tagged blank, the tag in frames will be deleted when transmitted from the VC.
- **Ethernet:** Select the Ethernet port as a member of VLAN, and if you leave the Tagged blank, the tag in frames will be deleted when transmitted from the port.
- **USB:** Select the USB port as a member of VLAN, and if you leave the Tagged blank, the tag in frames will be deleted when transmitted from the port.
- **VLAN Group Summary:** This displays the information about the VLAN Groups.

#### 4.4.6 ADSL

Choose “**Advanced Setup**→**ADSL**”, you can select the ADSL Type and ADSL Mode in the next screen. The ADSL feature can be selected when you meet the physical connection problem. Please check the proper settings with your Internet service provider.

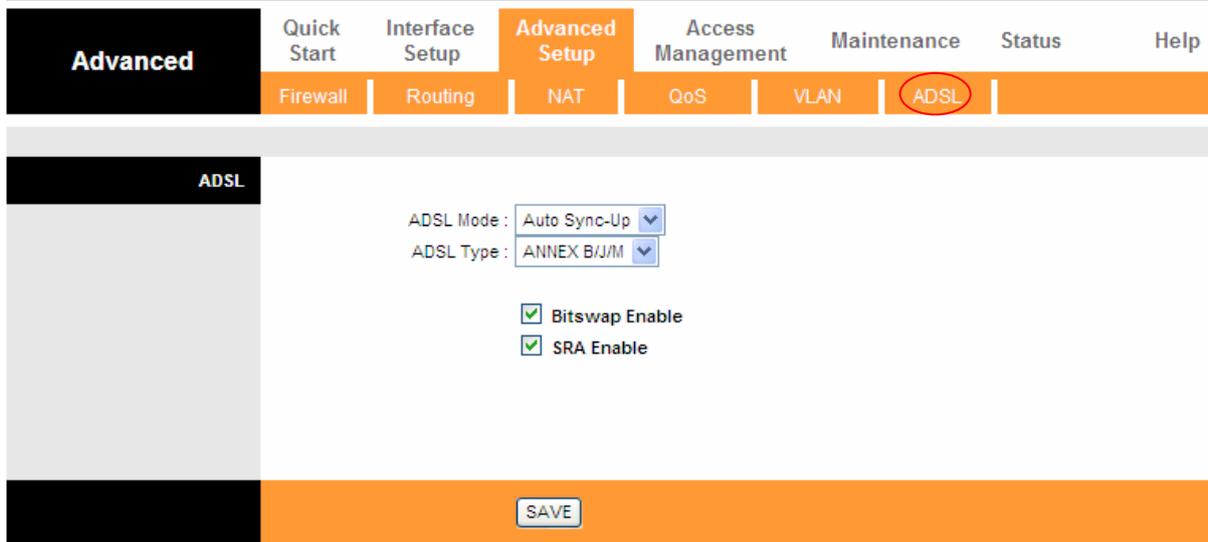

Figure 4-27

- **ADSL Mode:** Select the ADSL operation mode which your ADSL connection uses.
- **ADSL Type:** Select the ADSL operation type which your ADSL connection uses.

## 4.5 Access Management

Choose “**Access Management**”, you can see the next submenus:

Figure 4-28

Click any of them, and you will be able to configure the corresponding function.

### 4.5.1 ACL

Choose “**Access Management**→**ACL**”, you can see the next screen (shown in Figure 4-29). You can specify the client to access the ADSL Router once setting his IP as a Secure IP Address through selected applications.

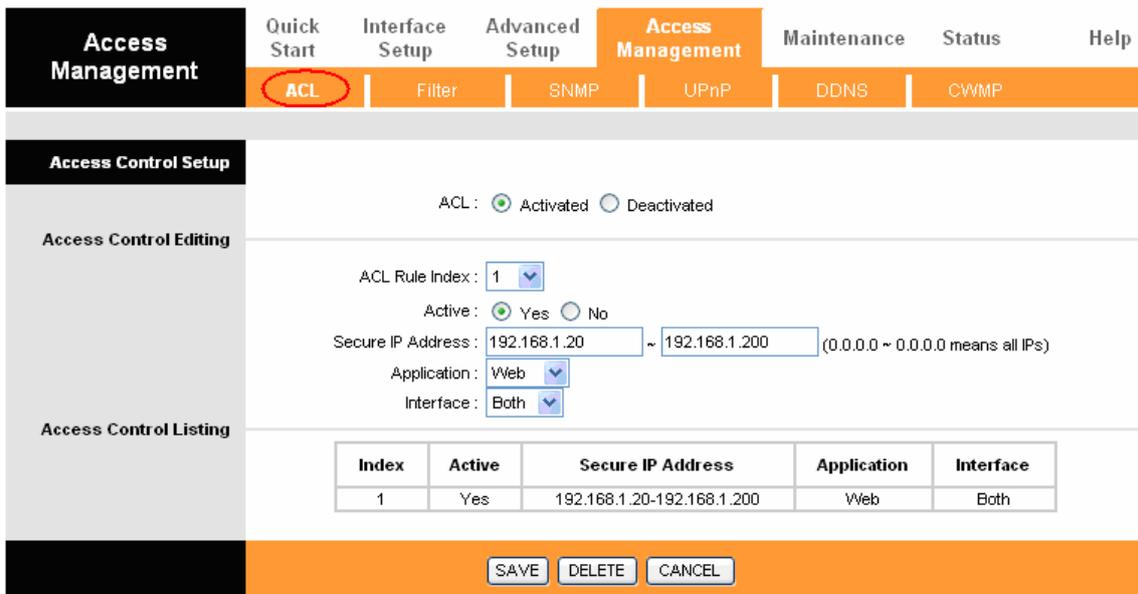

Figure 4-29

- **ACL:** If **Activated**, the IP addresses which are contained in the Access Control List can access to the Router. If **Deactivated**, all IP addresses can access to the Router.
- **ACL Rule Index:** Select the ACL rule index for the entry.
- **Active:** Enable the ACL rule.
- **Secure IP Address:** Select the IP addresses which are permitted to access to the Router remotely. With the default IP 0.0.0.0, any client would be allowed to remotely access the ADSL Router.
- **Application:** Select the application for the ACL rule, and then you can access the Router through it.
- **Interface:** Select the interface for access: LAN, WAN or Both.
- **Access Control of Listing:** This displays the information about the ACL Rules.

## 4.5.2 Filter

Choose “**Access Management**→**Filter**”, you can see the Filter screen (the default is IP/MAC Filter screen shown in Figure 4-30). The filtering feature includes IP/MAC Filter, Application Filter, URL Filter. The feature makes it possible for administrators to control user's access to the Internet, protect the networks.

### 4.5.2.1. IP Filter

Select **IP/Mac Filter** as the Filter type, and select **IP** as the Rule type (shown in Figure 4-30), then you can configure the filter rules based on IP address. The filtering includes **Outgoing** and **Incoming**, the detailed descriptions are provided below.

**Filter**

**Filter Type**

Filter Type Selection: IP / MAC Filter

**IP / MAC Filter Set Editing**

IP / MAC Filter Set Index: 1  
 Interface: PVC0  
 Direction: Both

**IP / MAC Filter Rule Editing**

IP / MAC Filter Rule Index: 1  
 Rule Type: IP  
 Active:  Yes  No

Source IP Address: 192.168.1.7 (0.0.0.0 means Don't care)  
 Subnet Mask: 255.255.255.255  
 Port Number: 0 (0 means Don't care)

Destination IP Address: 0.0.0.0 (0.0.0.0 means Don't care)  
 Subnet Mask: 0.0.0.0  
 Port Number: 25 (0 means Don't care)

Protocol: TCP  
 Rule Unmatched: Next

**IP / MAC Filter Listing**

IP / MAC Filter Set Index		Interface		Direction			
1		PVC0		Both			
#	Active	Src Address/Mask	Dest IP/Mask	Src Port	Dest Port	Protocol	Unmatched
1	Yes	192.168.1.7/ 255.255.255.255	0.0.0.0/ 0.0.0.0	0	25	TCP	Next
2	Yes	192.168.1.7/ 255.255.255.255	0.0.0.0/ 0.0.0.0	0	110	TCP	Next
3	Yes	192.168.1.8/ 255.255.255.255	202.96.134.12/ 255.255.255.255	0	0	TCP	Forward
4	-	-	-	-	-	-	-
5	-	-	-	-	-	-	-
6	-	-	-	-	-	-	-

SAVE DELETE CANCEL

Figure 4-30

- **Filter Type Selection:** Select the filter type for the configuration below.
- **IP/MAC Filter Set Index:** Select the Set index for the IP Filter entry. This index can match with six IP / MAC Filter Rule Indexes.
- **Interface:** Select the interface for the entry.

**Note:**

If select PVC0~PVC7 as a interface, the filter will match the IP traffic of WAN port with specified IPs (Source IP Address and Destination IP Address), If select LAN as a interface, the filter will match the IP traffic of LAN port with specified IPs.

- **Direction:** Select the direction for this IP Filter rule. There are three filtering directions: Both, Incoming, Outgoing.

**Note:**

Incoming means that IP traffic which is coming into the router, and the Outgoing means that IP traffic which is going out the router.

- **IP/MAC Filter Rule Index:** Select the Rule index for the IP Filter entry.

**Note:**

You should set the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** together to appoint the address (shown in the Filter List) for the IP Filter rule. For example, (1, 2), it means the rule will be shown in the row 2 IP/MAC Filter Set Index 1.

- **Rule Type:** For IP Filter, please select IP here.
- **Active:** Select “Yes” to make the rule to take effect.
- **Source IP Address:** Enter the source IP address for the rule. You can enter 0.0.0.0; it means that all IP addresses are controlled by the rule.
- **Subnet Mask:** Enter the Subnet Mask for the rule.
- **Port Number:** Enter the Port Number for the rule. You can enter 0, it means that all ports are controlled by the rule.
- **Destination IP Address:** Enter the destination IP address for the rule. You can enter 0.0.0.0, it means that all IP addresses are controlled by the rule. The set of **Subnet Mask** and **Port Number** are same as Source IP Address.
- **Protocol:** Select the protocol: **TCP**, **UDP** or **ICMP** for the filter rule.
- **Rule Unmatched:** If the current rule can not match, and you select **Forward**, the router will skip the rule and transmit directly. If you select **Next**, the router will find the next filter rule (show in Filter list) to match.
- **IP/MAC Filter Listing:** This displays the information about the IP Filter rules.

**To add an IP Address filtering entry:**

**For example:** If you desire to block E-mail received and sent by the IP address 192.168.1.7 on your local network; And wish to make the PCs with IP address 192.168.1.8 unable to visit the website of IP address 202.96.134.12, while other PCs have no limit. You can configure the rules as follows. Presume the rules are both aimed at the interface PVC0, and their indexes are (1, 1), (1, 2) and (1, 3).

**Step 1:** Select the “IP/MAC Filter” as the Filter Type Selection (show in Figure 4-30).

Filter Type Selection : IP / MAC Filter

Select the “IP” as the Rule Type on the Filter screen, then you can configure the specific rule for the example.

Rule Type : IP

**Step 2:** Select the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** for the rule, then select the Interface “PVC0”, and select the Direction “Both” for the first rule.

IP / MAC Filter Set Index : 1

Interface : PVC0

Direction : Both

---

IP / MAC Filter Rule Index : 1

Rule Type : IP

Active :  Yes  No

**Note:**

If you want to make the rule take effect, please select **Yes** to activate the rule.

**Step 3:** Enter the “Source IP Address”, “Destination IP Address”, “Subnet Mask” and “Port Number” in the corresponding field.

Source IP Address : 192.168.1.7 (0.0.0.0 means Don't care)

Subnet Mask : 255.255.255.255

Port Number : 0 (0 means Don't care)

---

Destination IP Address : 0.0.0.0 (0.0.0.0 means Don't care)

Subnet Mask : 0.0.0.0

Port Number : 25 (0 means Don't care)

---

Protocol : TCP

Rule Unmatched : Next

**Step 4:** Select the Protocol as “TCP” and select the Unmatched rule as “Next”.

**Step 5:** Finally, click the **SAVE** to save the entry.

**Step 6:** Go to Step 2 to configure the next two rules: Block E-mail received by the IP address 192.168.1.7 on your local network; Make the PC with IP address 192.168.1.8 unable to visit the website of IP address 202.96.134.12.

**Note:**

After you complete the IP filter rules for the example, the Filter list will show as follows. You can enter the **IP / MAC Filter Set Index** to view the information about the rule.

#	Active	Src Address/Mask	Dest IP/Mask	Src Port	Dest Port	Protocol	Unmatched
1	Yes	192.168.1.7/ 255.255.255.255	0.0.0.0/ 0.0.0.0	0	25	TCP	Next
2	Yes	192.168.1.7/ 255.255.255.255	0.0.0.0/ 0.0.0.0	0	110	TCP	Next
3	Yes	192.168.1.8/ 255.255.255.255	202.96.134.12/ 255.255.255.255	0	0	TCP	Forward

**Other operation for the entries as shown in Figure 4-30:**

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to view or modify the entry.

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

4.5.2.2. MAC Filter

Select **IP/Mac Filter** as the Filter type, and select **MAC** as the Rule type (shown in Figure 4-31), then you can configure the filter rules based on MAC address.

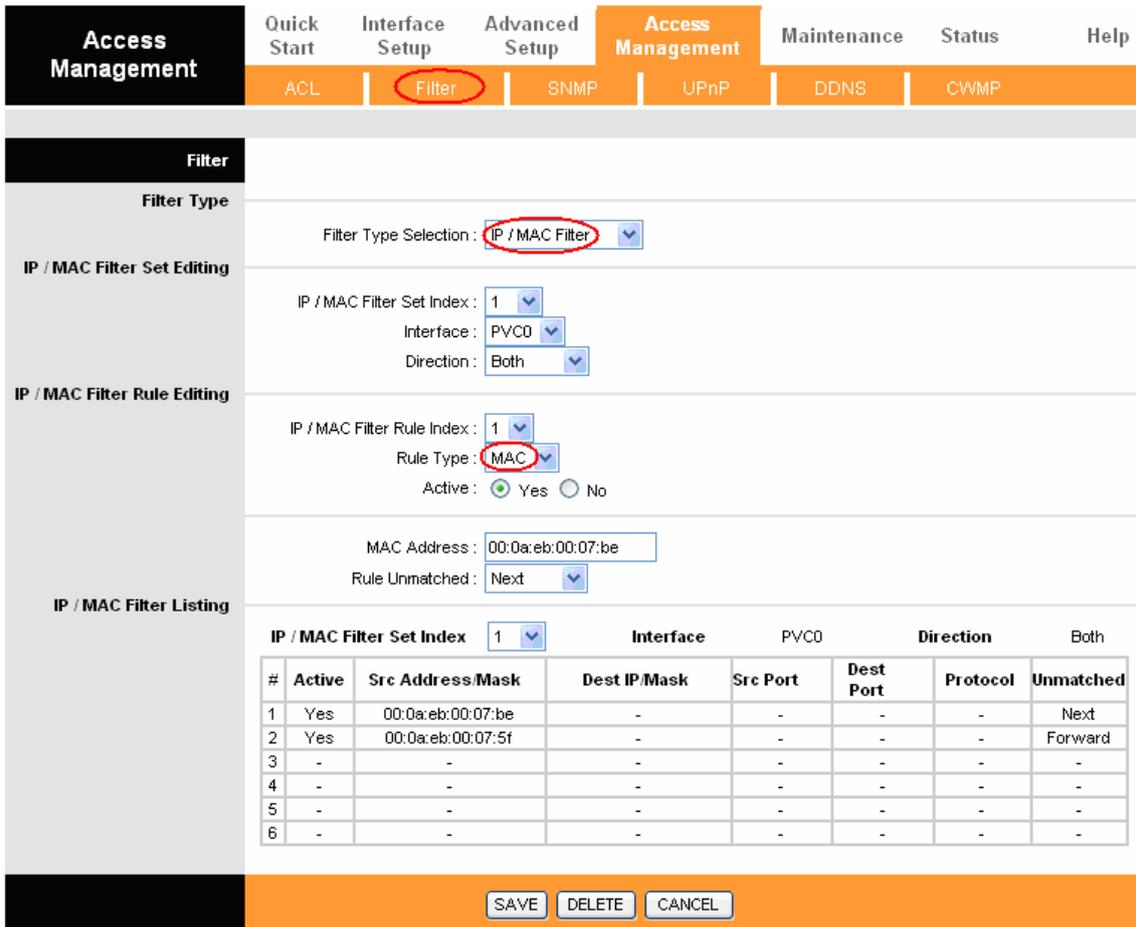

Figure 4-31

- **Rule Type:** Select MAC for the MAC Filter rule.
- **Active:** Select “Yes” to make the rule to take effect.
- **MAC Address:** Enter the MAC address for the rule.
- **Rule Unmatched:** If the current rule can not match, and you select **Forward**, the router will skip the rule and transmit directly. If you select **Next**, the router will find the next filter rule (show in Filter list) to match.
- **IP/MAC Filter Listing:** This displays the information about the MAC Filter rules.

**To add a MAC Address filtering entry:**

**For example:** If you want to block the PCs with MAC addresses 00-0A-EB-00-07-BE and 00-0A-EB-00-07-5F to access the Internet, you can configure as follows. Presume the rules are both aimed at the interface PVC0, and their indexes are (1, 1) and (1, 2).

**Step 1:** Select the “IP/MAC Filter” as the Filter Type Selection:

Select the “MAC” as the Rule Type on the Filter screen (show in Figure 4-31).

Rule Type :

, Then you can configure the specific rule for the example.

**Step 2:** Select the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** for the rule, then select the Interface “PVC0”, and select the Direction “Outgoing” for the first rule.

IP / MAC Filter Set Index :	<input type="text" value="1"/>
Interface :	<input type="text" value="PVC0"/>
Direction :	<input type="text" value="Outgoing"/>
IP / MAC Filter Rule Index :	<input type="text" value="1"/>
Rule Type :	<input type="text" value="MAC"/>
Active :	<input checked="" type="radio"/> Yes <input type="radio"/> No

**Note:**

If you want to make the rule take effect, please select **Yes** to active the rule.

**Step 3:** Enter the “MAC Address” and select the Unmatched rule as “Next”.

MAC Address :	<input type="text" value="00:0A:EB:00:07:BE"/>
Rule Unmatched :	<input type="text" value="Next"/>

**Step 4:** Finally, click the **SAVE** to save the entry.

**Step 5:** Go to Step 2 to configure the next rule: Block the PC with MAC address 00-0A-EB-00-07-5F to access the Internet.

**Note:**

After you complete the MAC filter rules for the example, the Filter list will show as follows. You can enter the **IP / MAC Filter Set Index** to view the information about the rule.

#	Active	Src Address/Mask	Dest IP/Mask	Src Port	Dest Port	Protocol	Unmatched
1	Yes	00:0a:eb:00:07:be	-	-	-	-	Next
2	Yes	00:0a:eb:00:07:5f	-	-	-	-	Forward

**Other operation for the entries as shown in Figure 4-28:**

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to view or modify the entry.

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

**4.5.2.3. Application Filter**

Select **Application Filter** as the Filter type (shown in Figure 4-32), then you can configure the filter rules based on application.

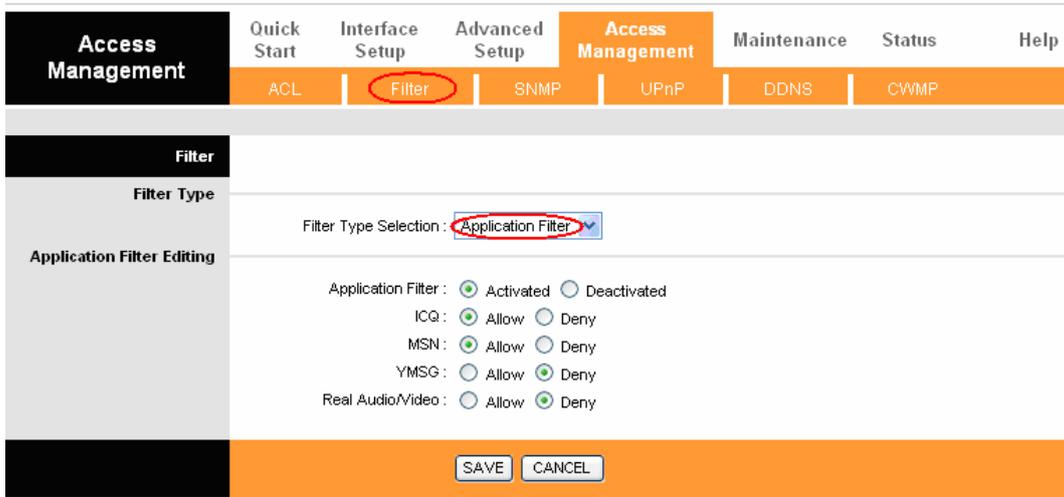

Figure 4-32

- **Filter Type Selection:** Select the Application Filter for the next configuration.
- **Application Filter:** Activate or deactivate the function.
- **ICQ & MSN & YMSG & Real Audio/Video:** Select **Allow** or **Deny** for these applications. If you select Allow, the Router will accept the application; if you select Deny, the Router will forbid the application.

#### 4.5.2.4. URL Filter

Select **URL Filter** as the Filter type (shown in Figure 4-33), then you can configure the filter rules based on URL.

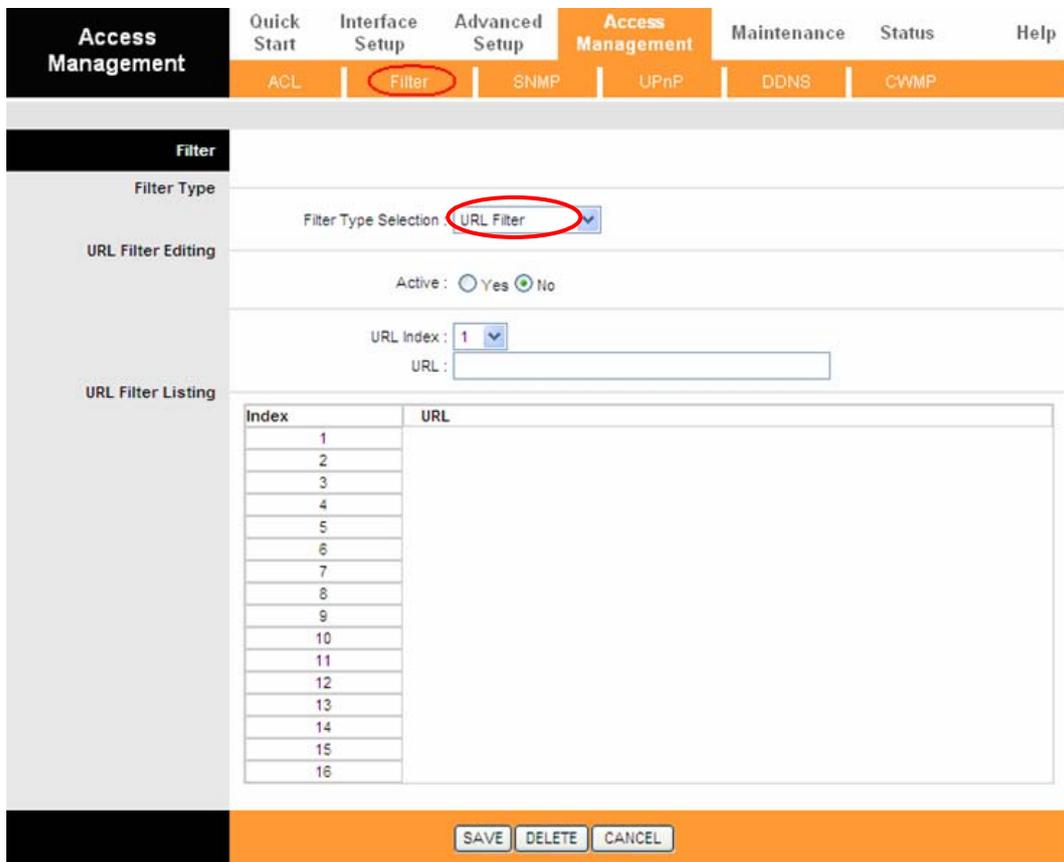

Figure 4-33

- **Filter Type Selection:** Select the URL Filter for the next configuration.
- **Active:** Select “Yes” to make the rule to take effect.
- **URL Index:** Select the index for the URL Filter entry.
- **URL:** Enter the URL for this URL Filter.
- **URL Filter Listing:** This displays the information about the URL Filter rules.

To add a URL filter entry:

**For example:** If you want to forbid the user to access the website: [www.yahoo.com](http://www.yahoo.com). Presume its index is “1”.

**Step 1:** Select the “URL Filter” as the Filter Type Selection (show in Figure 4-33).

**Step 2:** Select the Index for the rule, and then enter the website in the URL field.

**Step 3:** Finally, Select Yes to activate the rule, and then click the **SAVE** to save the entry.

**Other operation for the entries as shown in Figure 4-30:**

Select the **URL Index** to view or modify the entry.

Select the **URL Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

### 4.5.3 SNMP

Choose “**Access Management**→**SNMP**”, you can see the SNMP screen. The Simple Network Management Protocol (SNMP) is used for exchanging information between network devices.

Figure 4-34

- **Get Community:** Set the password for the incoming Get and Get next requests from the management station.
- **Set Community:** Set the password for incoming Set requests from the management station.

### 4.5.4 UPnP

Choose “**Access Management**→**UPnP**”, you can configure the UPnP in the screen (shown in Figure 4-35).

UPnP (Universal Plug and Play) is a distributed, open networking standard that uses TCP/IP for simple peer-to-peer network connectivity between devices. An UPnP device can dynamically join a network, obtain an IP address, convey its capabilities and learn about other devices on the network. In turn, a device can leave a network smoothly and automatically when it is no longer in

use. UPnP broadcasts are only allowed on the LAN.

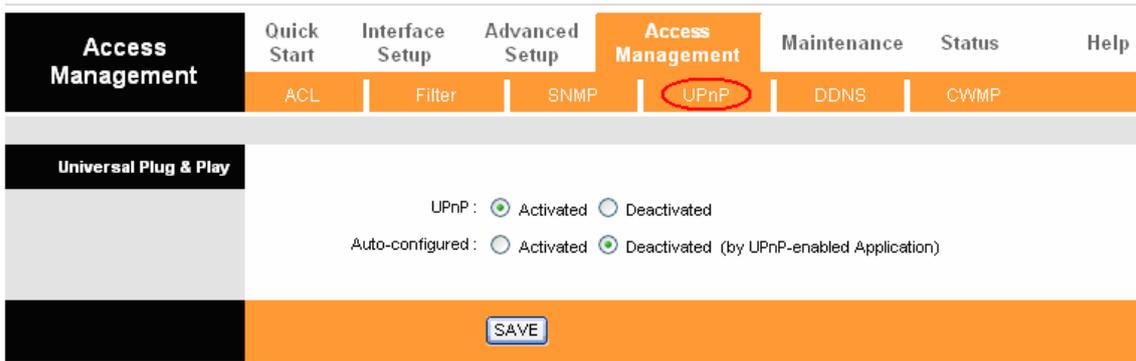

Figure 4-35

- **UPnP:** Activate or Deactivate the UPnP function. Only when the function is activated, can the UPnP take effect.
- **Auto-Configure:** If you activate the function, then the UPnP network devices can automatically configure network addressing, announce their presence in the network to other UPnP devices and enable exchange of simple product and service descriptions.

#### 4.5.5 DDNS

Choose “**Access Management**→**DDNS**”, you can configure the DDNS function in the screen (shown in Figure 4-36).

The router offers a Dynamic Domain Name System (**DDNS**) feature. The feature lets you use a static host name with a dynamic IP address. User should type the host name, user name and password assigned to your ADSL Router by your Dynamic DNS provider. User also can decide to turn on DYNDNS Wildcard or not.

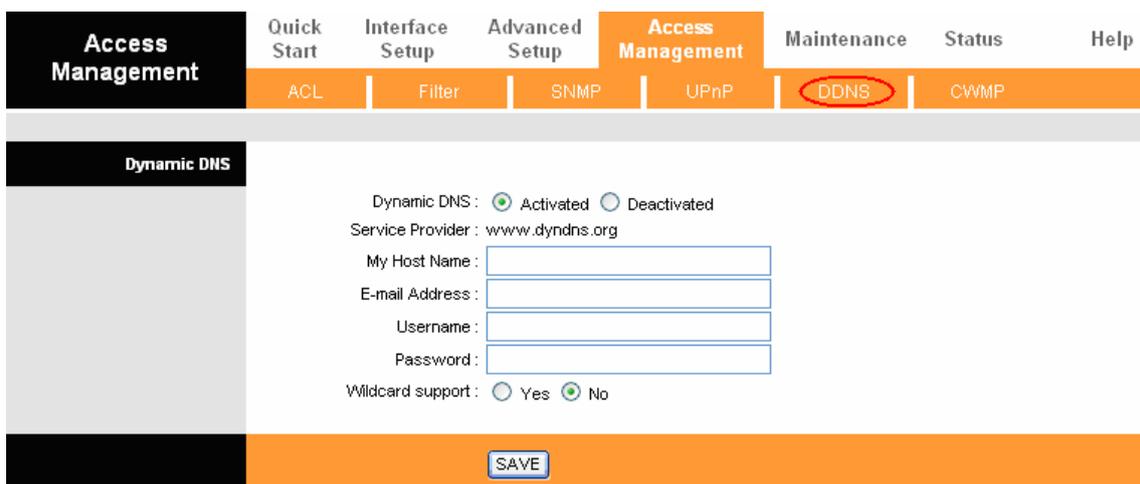

Figure 4-36

- **Dynamic DNS:** Activate the DDNS function or not.
- **Service Provider:** This field displays the service provider of DDNS.
- **My Host Name:** Enter your host name here.
- **E-mail Address:** Enter your E-mail address here.
- **Username & Password:** Type the “User Name” and “Password” for your DDNS account.

- **Wildcard support:** Select the option to use Wildcard function

### 4.5.6 CWMP

Choose “**Access Management**→**CWMP**”, you can configure the CWMP function in the screen (shown in Figure 4-37).

The router offers CWMP feature. The function supports TR-069 protocol which collects information, diagnoses the devices and configures the devices automatically via ACS (Auto-Configuration Server).

Figure 4-37

- **CWMP:** Select activate the CWMP function.
- **URL:** Enter the website of ACS which is provided by your ISP.
- **User Name/Password:** Enter the User Name and password to login the ACS server.
- **Path:** Enter the path that connects to the ACS server.
- **Port:** Enter the port that connects to the ACS server.
- **User Name/Password:** Enter the User Name and Password that provided the ACS server to login the router.
- **Periodic Inform:** Activate or deactivate the function. If Activated, the information will be informed to ACS server periodically.
- **Interval:** Enter the interval time here.

## 4.6 Maintenance

Choose “**Maintenance**”, you can see the next submenus:

Figure 4-38

Click any of them, and you will be able to configure the corresponding function.

### 4.6.1 Administration

Choose “**Maintenance→Administration**”, you can set new password for admin in the screen (shown in Figure 4-39).

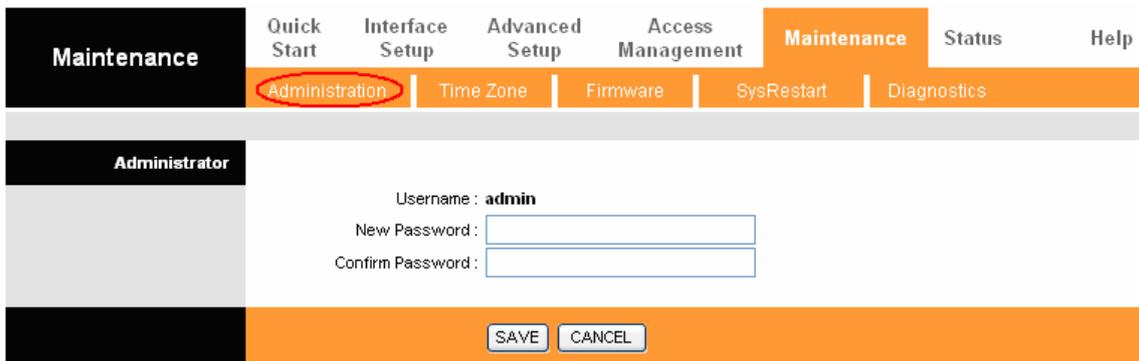

Figure 4-39

**Note:**

- 1) There is only one account that can access Web-Management interface. The default account is "admin", and the password is "admin". Admin has read/write access privilege.
- 2) When you change the password, you should enter the new password twice, and then click **SAVE** to make the new password take effect.

### 4.6.2 Time Zone

Choose “**Maintenance→Time Zone**”, you can configure the system time in the screen (shown in Figure 4-39).

The system time is the time used by the device for scheduling services. There are three methods to configure the time. You can manually set the time or connect to a NTP (Network Time Protocol) server. If a NTP server is set, you will only need to set the time zone. If you manually set the time, you may also set Daylight Saving dates and the system time will automatically adjust on those dates.

#### 1. NTP Server automatically

Select **NTP Server automatically** as the Synchronize time, you only need to set the time zone.

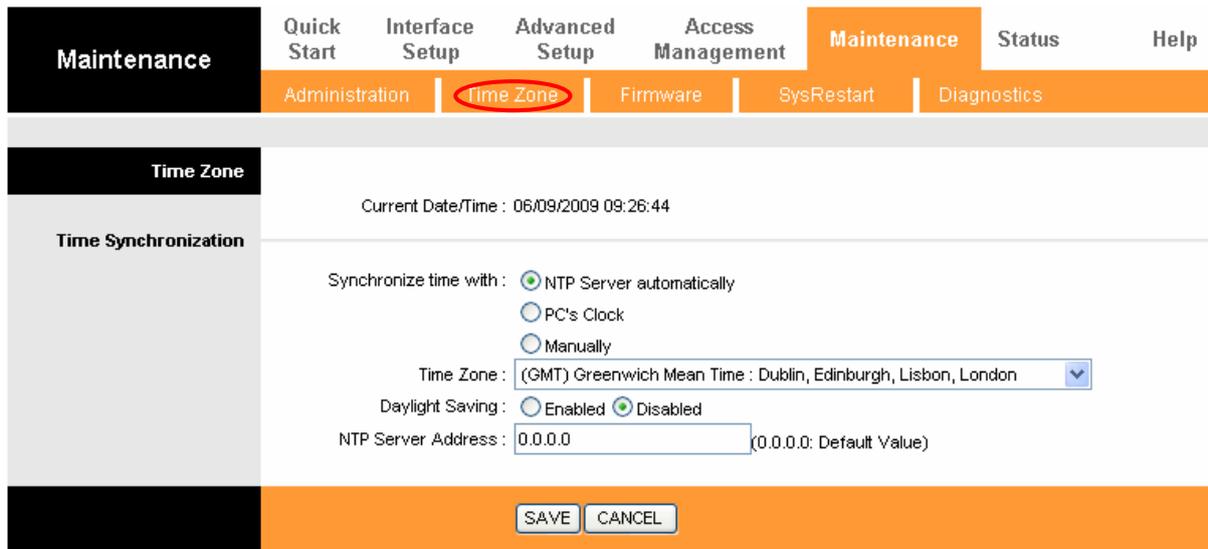

Figure 4-40

**Note:**

The ADSL Router built-in some NTP Servers, when the Router connects to the Internet, the Router will get the system time automatically from the NTP Server. You can also configure the NTP Server address manually, and then the Router will get the time from the specific Server firstly.

**2. PC's Clock**

Select **PC's Clock** as the Synchronize time, you don't need to set any items.

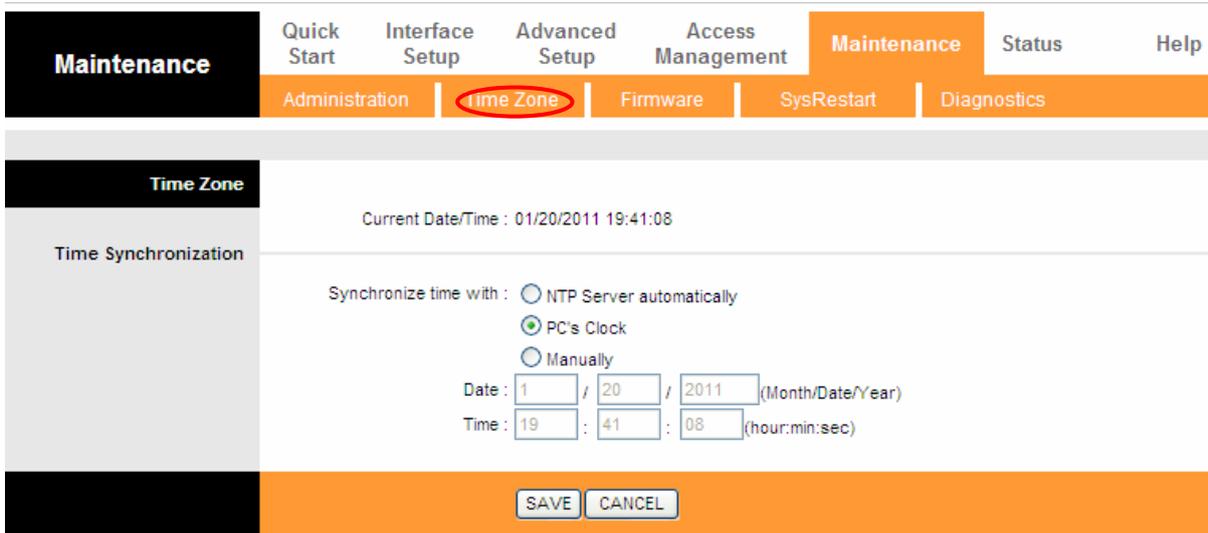

Figure 4-41

**3. Manually**

Select **Manually** as the Synchronize time, you need to set the date and time corresponding to the current time.

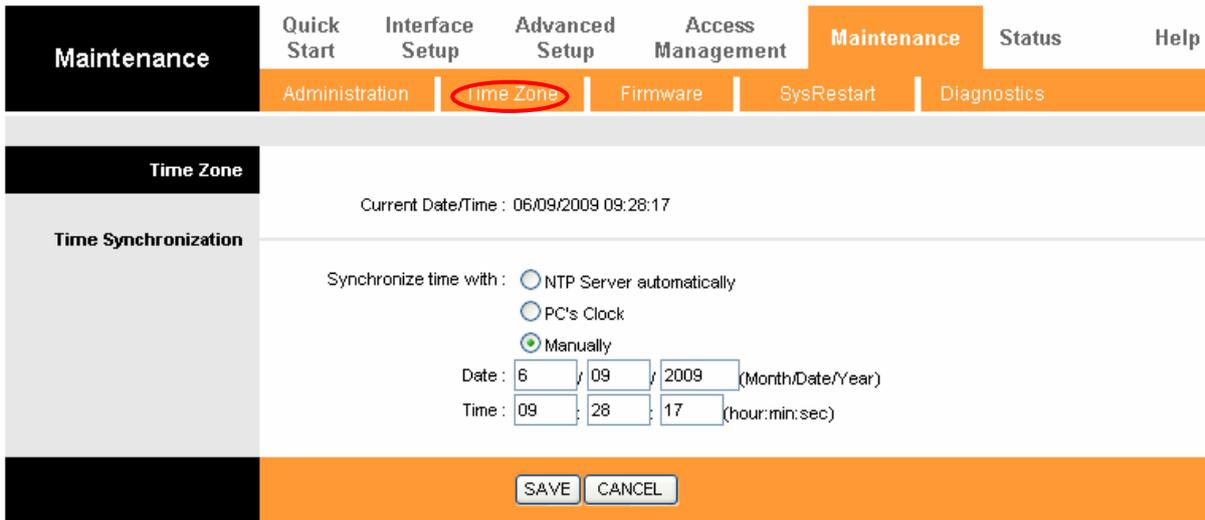

Figure 4-42

### 4.6.3 Firmware

Choose “**Maintenance**→**Firmware**”, you can upgrade the firmware of the Router in the screen (shown in Figure 4-43). Make sure the firmware or romfile you want to use is on the local hard drive of the computer. Click **Browse** to find the local hard drive and locate the firmware or romfile to be used for upgrade.

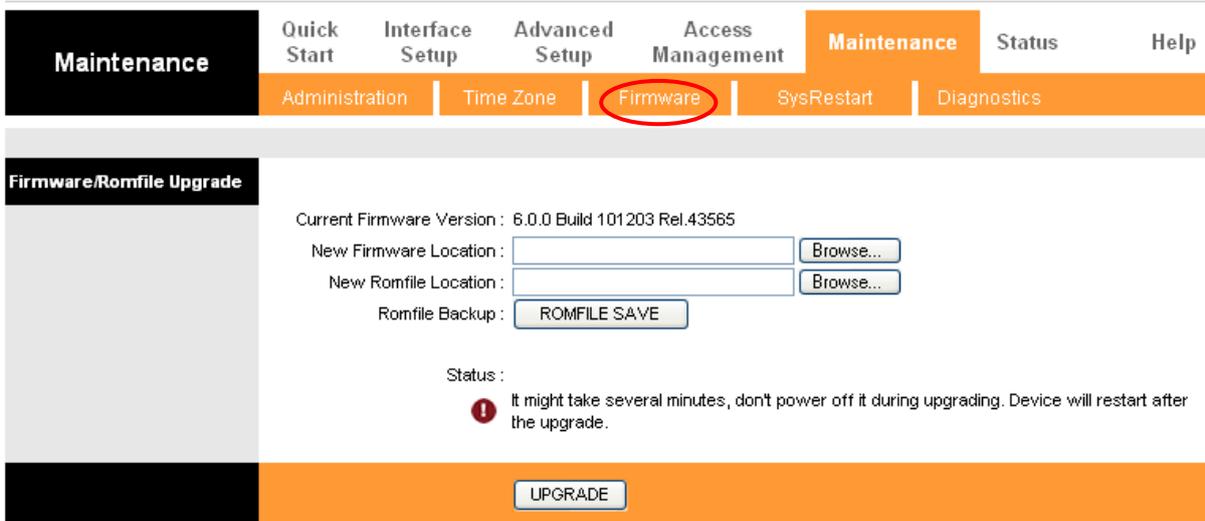

Figure 4-43

To upgrade the router's firmware, follow these instructions below:

- Step 1:** Download a more recent firmware upgrade file from the TP-LINK website ([www.tp-link.com](http://www.tp-link.com)).
- Step 2:** Type the path and file name of the update file into the “New Firmware Location” field. Or click the **Browse** button to locate the update file.
- Step 3:** Click the **UPGRADE** button.

**Note:**

- 1) New firmware versions are posted at [www.tp-link.com](http://www.tp-link.com) and can be downloaded for free. If the router is not experiencing difficulties, there is no need to download a more recent firmware version, unless the version has a new feature that you want to use.
- 2) When you upgrade the router's firmware, you may lose its current configurations, so please back up the router's current settings before you upgrade its firmware.
- 3) Do not turn off the router or press the Reset button while the firmware is being upgraded.
- 4) The router will reboot after the upgrading has been finished.

**To back up the Router's current settings:**

**Step 1:** Click the **ROMFILE SAVE** button (shown in Figure 4-43), click **Save** button in the next screen (shown in Figure 4-44) to proceed.

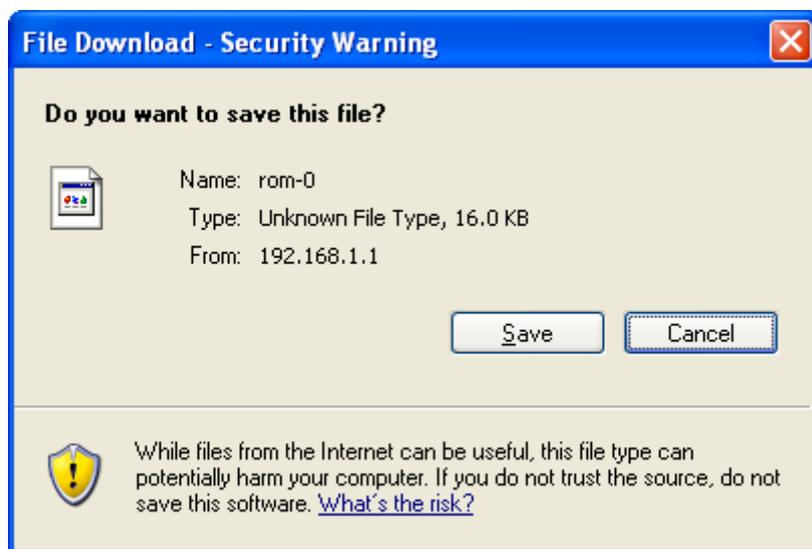

Figure 4-44

**Step 2:** Save the file as the appointed file (shown in Figure 4-45).

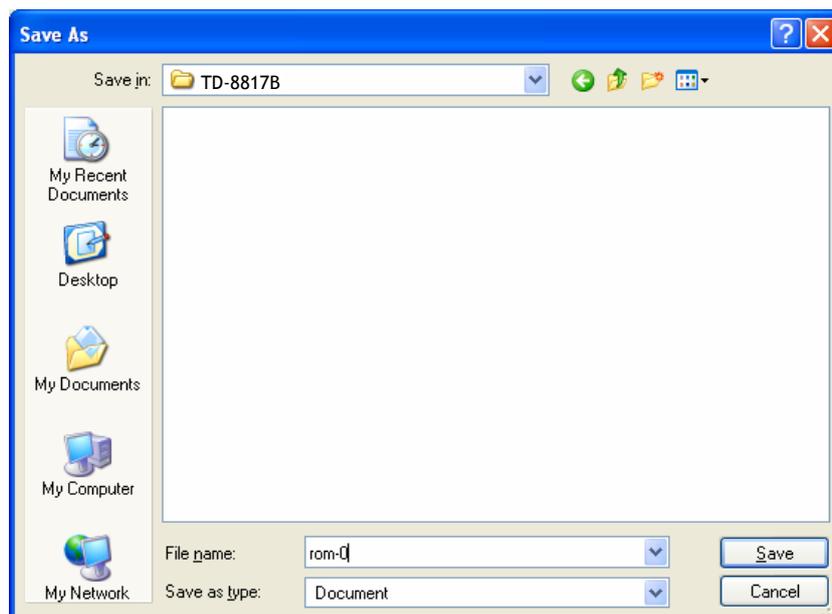

Figure 4-45

To restore the Router’s settings:

**Step 1:** Click the **Browse** button to locate the update file for the device, or enter the exact path in “New Romfile Location” field.

**Step 2:** Click the **UPGRADE** button to complete.

### 4.6.4 SysRestart

Choose “**Maintenance**→**SysRestart**”, you can select to restart the device with current settings or restore to factory default settings in the screen (shown in Figure 4-46).

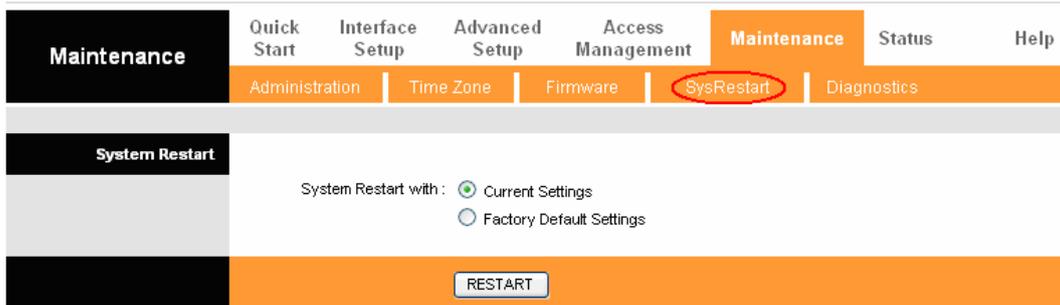

Figure 4-46

### 4.6.5 Diagnostic

Choose “**Maintenance**→**Diagnostic**”, you can view the test results for the connectivity of the physical layer and protocol layer for both LAN and WAN sides in the screen (shown in Figure 4-47).

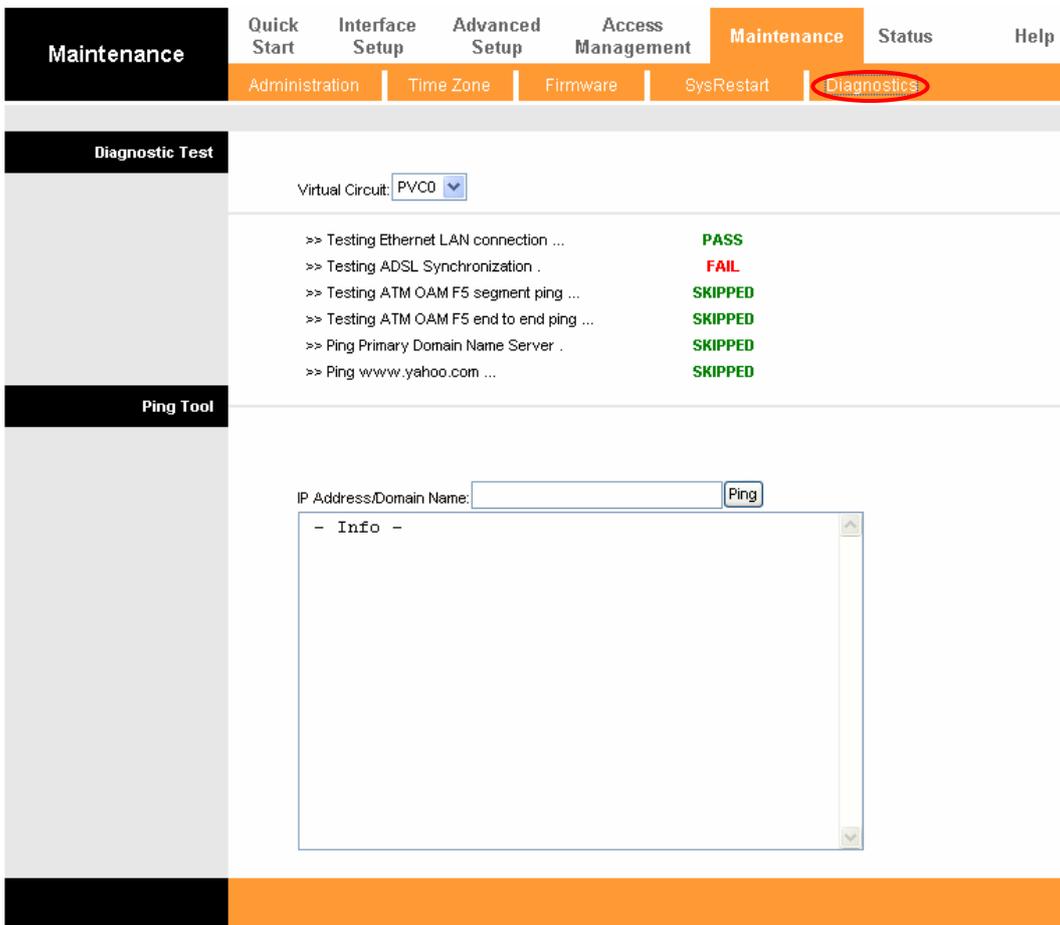

Figure 4-47

## 4.7 Help

Choose “Help”, you can view the help information for configuration of any function.

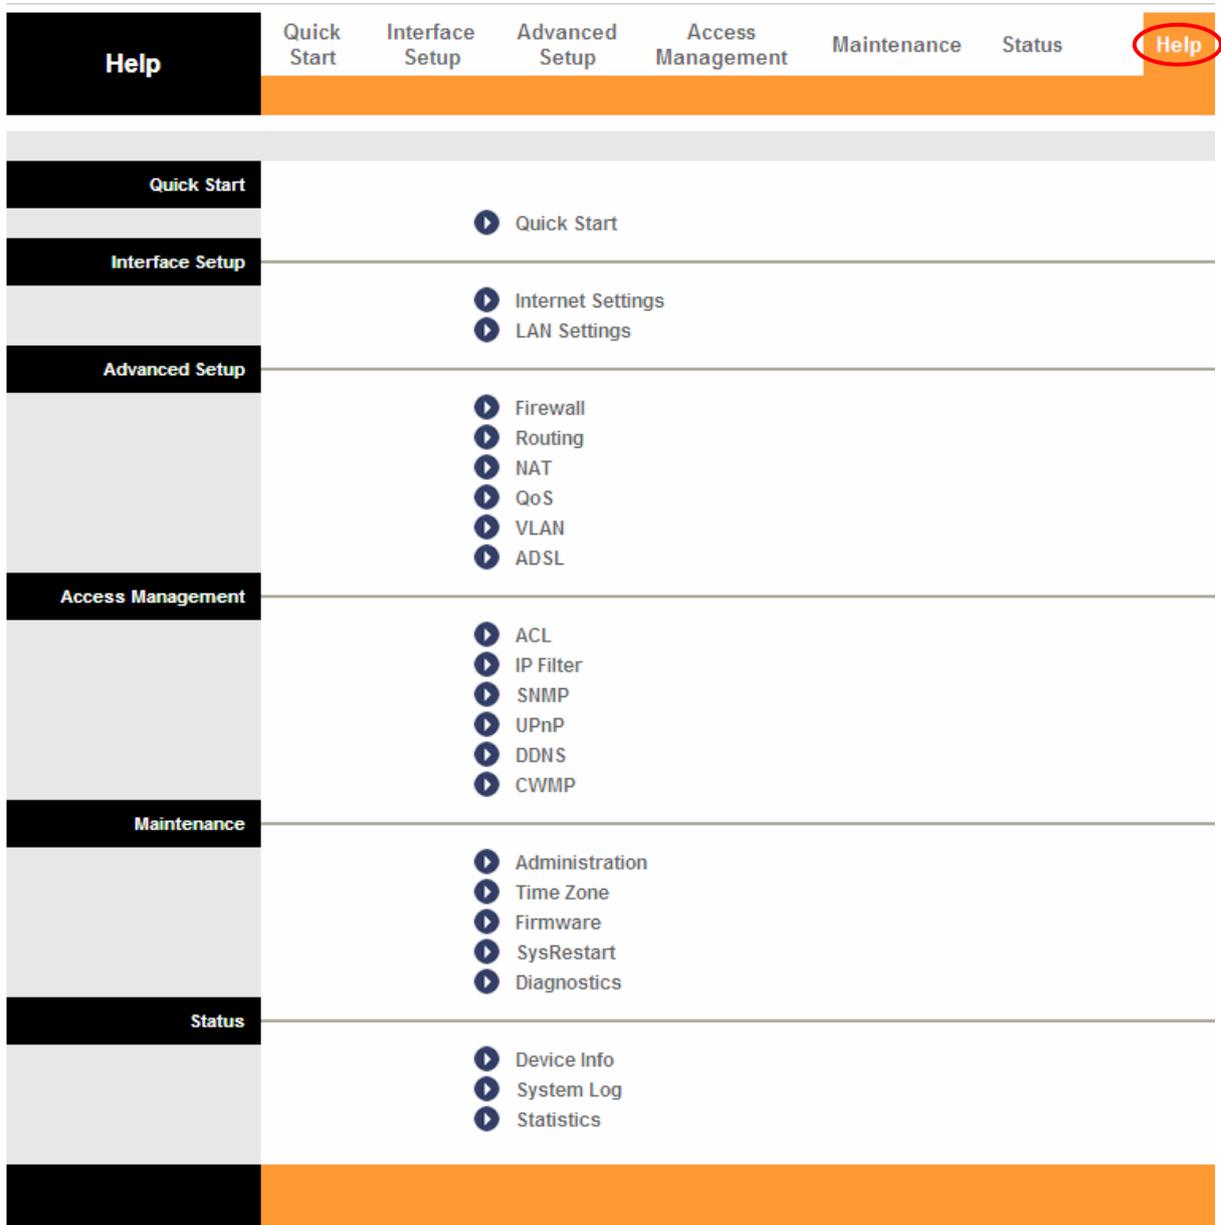

Figure 4-48

**Note:**

Click the tab, and you will be able to get the corresponding information.

## Appendix A: Specification

General	
Standards and Protocols	ANSI T1.413, ITU G.992.1, ITU G.992.2, ITU G.992.3, ITU G.992.5 IEEE 802.3, IEEE 802.3u, TCP/IP, PPPoA , PPPoE, SNTP, HTTP, DHCP, ICMP, NAT,CWMP
Safety & Emission	FCC, CE
Ports	1 10/100M Auto-Negotiation RJ45 port (Auto MDI/MDIX) 1 RJ11 port 1 USB 1.1 port
LEDs	Power, USB, LAN, ADSL Internet
Network Medium	10Base-T: UTP category 3, 4, 5 cable 100Base-TX: UTP category-5 USB: USB cable Max line length: 6.5Km
Data Rates	Downstream: Up to 24Mbps Upstream: Up to 3.5Mbps (With Annex M enabled)
System Requirement	Internet Explorer 5.0 or later, Netscape Navigator 6.0 or later Windows 9x/ME/2000/XP/Vista/7
Physical and Environment	
Working Temperature	0°C ~ 40°C
Working Humidity	10% ~ 90% RH (non-condensing)
Storage Temperature	-40°C ~ 70°C
Storage Humidity	5% ~ 90% RH (non-condensing)
