

IKELITE VIDEO CASE

SUPPLEMENTAL INSTRUCTIONS FOR

#6038.19 Sony DCR-HC90

This supplemental set of instructions describes additional features specific to your housing model. Prior to testing the system in the water, please read this supplement along with the general instruction manual to become familiar with its features and functions.

Ikelite Video Cases are slightly negative in salt water for stability. This housing has been water pressure tested at the factory and has a working depth of 60m (200').

HOUSING CONTROLS

- Power On/Off / Mode
- Start/Stop
- Power Zoom
- Photo
- Flash
- Back Light / Display info/ Easy Operation
- Wide Select

MAIN O-RING #0109

O-rings last several years if properly maintained. Control seals should not need to be replaced as long as the control shafts are kept clean and lightly lubricated.

PREPARATION

PACKAGED WITH HOUSING

- External UR/Pro Color Filter
- Silicone Lubricant

External Color Filter

COLOR FILTER

The installation and usage of the external UR/Pro color filter is described in the general instruction manual.

OPTIONAL WIDE ANGLE LENS

The lens port on the front of the housing accepts the optional wide-angle lenses offered by Epoque (DCL-20), Inon (UWL-100 Type-2) and the discontinued Sea&Sea (58070). These waterproof lenses secure to the outside of the lens port, and are not marketed by Ikelite.

Should you elect to use the optional Epoque, Inon or Sea&Sea lens, carefully thread the waterproof lens on the front of the lens port. The lens threads are very fine; **DO NOT** cross thread. It should screw on very easily. If it is difficult to turn, you are cross threading.

There is another optional wide-angle lens, which secures directly to the front of the camera lens, inside the housing. It is the optional Xo.6 conversion wide-angle lens VCL-0630S by Sony. Although this lens is now discontinued by Sony, you still may be able to locate this lens from a supplier of Sony products. Note that you **MUST** also replace the original lens port on the housing with the required Ikelite extended lens port #9306.32 in order to use the optional Sony wide-angle lens inside the housing.

SUPER-EYE VIEWFINDER

See exactly what the camera sees underwater using the camera's electronic viewfinder in conjunction with the Ikelite Super-Eye, which is permanently mounted in the eyeport on the clear back plate. The Super-Eye extends the viewfinder image to provide enhanced viewing underwater.

LCD MONITOR

The camera's LCD monitor can be viewed thru the side of the housing. Open the LCD monitor on the camera, rotate 180°, and then press it back against the side of the camera so that the LCD monitor is visible.

To view the image on the LCD monitor from the rear of the housing, Ikelite offers optional External Mirror #9290.94, which adheres to the outside of the housing. Then the LCD image can be viewed from the rear.

BATTERY AND TAPE

Install a fully charged Sony battery in the camera:

Sony NP-FA50, Sony NP-FA70

Make sure you have loaded an appropriate digital cassette tape in the camera.

FINAL PREPARATION

Remove the lens cap and cord from the camera. Otherwise, they may interfere with the housing seal.

The camera's auto focus feature is utilized underwater. For best results, move in close to your subject and use the wide-angle range to shoot thru as little water as possible. Full range zoom range is accessible underwater. Chart shows recommended initial settings underwater.

CAMERA	SETTING
Power On/Off	- Camera (On)
Zoom Lever	- Wide Angle Setting
Focus	- Auto Mode
Exposure	- Auto Mode
External Flash	- Off

INSTALLATION

CAMERA TRAY

Note the placement of the camera tray underneath the guides, and note the two white-color locks on the inside wall of the housing that secure the tray in place. Gently push up on the white tray locks to release the camera tray, and slide the tray out of the housing.

Place the camera between the stabilizing pins on the tray. Secure camera with the tripod mounting bolt. The camera should fit easily on the tray and should be parallel with the sides of the tray.

INSERTING THE CAMERA

Pull the housing controls out to provide clearance for the camera. Slowly slide the camera tray (with camera mounted) back into the housing.

DO NOT force this installation; if the controls are out of the way and everything is lined up properly, the camera and tray will fit easily inside. Make certain that the tray is completely in the housing, and make sure that both white tray locks have locked the camera tray in place.

HOUSING CONTROLS

Slide the housing controls back in place making sure they properly align with the camera functions.

Operate each control to see how it works with the camera. Some controls such as start/stop will be used frequently. Other controls may seldom be utilized. Refer to your camera owner's manual for the proper function of each camera control. Look thru the back to be sure that you can see into the viewfinder.

When using the housing controls, especially the start/stop, **DO NOT** use excessive force because you could damage the camera.

CAUTION

Remove the lens cap and cord from the camera. Otherwise, the cord may interfere with the housing seal. If the housing controls are not properly positioned, they could interfere with the housing seal.
