Panasonic ideas for life

Panasonic ideas for life

At Panasonic, we're committed to better understanding the way people live, work and play. We never stop trying to increase our knowledge of the ways in which technology can improve people's lives. The insights we gain from these efforts make it possible to continually transform ideas into products that make our customer's lives simpler, more enjoyable, more productive and more secure.

Ideas like our 3CCD camcorders, which handle color the same way as our professional broadcast cameras, for rich vivid images. And our new HD camcorders, which capture precious moments in the stunning brilliance of High Definition video, with the remarkable convenience of recording on an attached hard drive or a SD memory card. At Panasonic you'll find smart ideas for every room, every need, everyday, and everyone.

Panasonic ideas for life

Capture All the Beauty in Every Scene. The Panasonic

HD Camcorder HIGH DEFINITION

For Scenes You'll Want to Enjoy Forever AVCHD

SD9

World's smallest and lightest*1 HD model
Record high-definition images onto a convenient SD card

10x Optical Zoom

3CCD, O.I.S., LEICA DICOMAR, PURE COLOR ENGINE, DD DOLBY DIGITAL 5.1 CREATOR, 2.7" Wide Viewing Angle LCD, 0.6 sec Quick Start, Easy Copying and Playback with the BN1, PRE-REC., FACE GREEN

1920x1080p FULL HD

*1 For 3CCD camcorders complying with AVCHD standards, as of January 6, 2008.

HS9

Hybrid HD model with 60GB hard disk holds up to 23 hours*2 of recording
Record high-definition images onto an SD card or hard disk

10x Optical Zoom

3CCD, O.I.S., LEICA DICOMAR, PURE COLOR ENGINE, DD DOLBY DIGITAL 5.1 CREATOR, 2.7" Wide Viewing Angle LCD, 0.6 sec Quick Start, Easy Copying and Playback with the BN1, PRE-REC., FACE GREEN

FULL HD
1920x1080p
*Progressive 1080/24p

The remarkable clarity and detail of full-HD progressive* images give you the gift of beautiful memories you'll enjoy forever

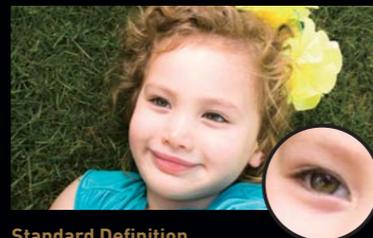

The most precious scenes in life – those you want to enjoy again and again – deserve the beauty only a full-HD camcorder can provide. Whether it's a glorious sunset that lights up the sky, a bunch of balloons that fill the air with dancing color, or a perfect moment reflected in your little girl's face, you want a camcorder that captures all the beauty in clear, vivid detail. With their full-HD 1920 x 1080 progressive images, Panasonic HD camcorders give you the beauty of today's most advanced technology. Whether you choose an SD card model or hard disk drive model, you can count on beautiful memories that will remain fresh forever. *Progressive scanning refers to the 1080/24p (24 pictures per second) recording format.

High Definition – A Future of Beautiful Memories

High Definition vs. Standard Definition: What's the Difference?

HD images contain 6 times as much information as standard images. HDTV has 1,080 horizontal scan lines, SDTV has 480. That translates into much higher resolution and much finer detail. With HD images on an HDTV, pictures are so clear and sharp that you can see textures. The shift in the industry from SDTV to HDTV is well under way. For shooting once-in-a-lifetime scenes that you want to capture in full beauty and enjoy forever, an HD camcorder is the best choice.

Standard Definition

High Definition

Each strand of hair and individual eyelash is captured in clear, distinct detail.

AVCHD

• AVCHD is a new standard for recording HD signals onto memory cards, DVD discs, and hard disks. It uses the H.264 standard to achieve more than twice the compression of conventional MPEG2 and MPEG4 standards. • AVCHD motion images recorded onto an SD Memory Card or a DVD disc cannot be played from a device that does not support the AVCHD standard. • Do not insert a disc containing AVCHD-recorded images into a device that does not support the AVCHD standard. The disc cannot be played on such a device, and it may not be possible to remove the disc once inserted.

*In HG (high image quality) mode. 1920 x 1080 full-HD recording with a Panasonic home-use camcorder refers to recording with 1,920 pixels in the horizontal direction and 1,080 pixels in the vertical direction.

Simply Breathtaking: Full-HD 1920 x 1080 Progressive* Images

Why Is the Image Quality So Much Better?

Panasonic full-HD camcorders record horizontal pixels at an HD resolution of up to 1,920 pixels, which results in a total of around 2,070,000 pixels. Panasonic full-HD camcorders use progressive scanning, which provides twice as much data per picture as conventional interlace scanning. This means you get images with exceptional resolution and detail. The 1080/24p format used by Panasonic full-HD camcorders lets you capture scenes with a rich, film-like quality. Add it up and you can see why Panasonic full-HD camcorders, with their full-HD 1920 x 1080 progressive* recording, take visual expression a leap ahead. <See page 10 for details.>

Progressive Scanning

Reproduces all of the image data in a single picture. Patterns in fabric are crisp and clear, with no color bleeding.

Interlace Scanning

Only half of the image data is reproduced in each picture. Fabric patterns run together, and flickering appears.

*Progressive scanning refers to the 1080/24p (24 pictures per second) recording format.

Film-like beauty: Captures more data to deliver richer images

Digital Cinema Mode

SD9 HS9

FULL HD 1920x1080p

Set the SD9 or HS9 to Digital Cinema mode and shoot in the 1920 x 1080 progressive 1080/24p format (24 pictures per second). Progressive scanning captures clear, vibrant

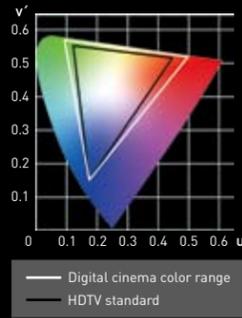

images with intricate detail. You also get faithful images with an appealing film-like quality.

Images are rich and luxuriant, just like at the movies.

Digital Cinema Color*

This mode automatically switches the camcorder to the Digital Cinema Color range, which approaches the digital cinema color range used in Hollywood digital movie production. Colors recorded in this mode look more vivid than those recorded using the conventional Panasonic standard. For example, the subtle reds and shades of gold of flowers, and the greens of leafy trees are remarkably true to life.

*When using a TV that is compatible with x.v.Color, images that are recorded in Digital Cinema Color mode will have a wider color range than conventional images. *The color range varies depending on the TV.

Superb color reproduction – faithful, natural colors with delicate nuances

3CCD Camera System

SD9 HS9 SX5

Most professional broadcasting cameras use the 3CCD camera system, with its superior color reproduction. In a 1CCD system, all of the incoming light information is processed by the same CCD. The more advanced 3CCD system uses three distinct CCDs for processing, so there is absolutely no light loss. The 3CCD camera system draws out the full potential of full-HD image quality.

1CCD The skin tone and vegetables don't look natural, they look artificial.

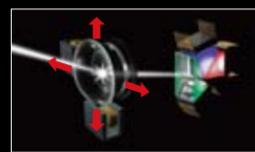

3CCD The skin tone and vegetables have natural color and look real.

Precise hand-shake compensation: Helps prevent blurry images caused by unsteady hands as you shoot

Advanced O.I.S. (Optical Image Stabilization)

SD9 HS9 SX5

Panasonic's Advanced O.I.S. suppresses the effects of hand shake as you shoot. The system uses gyrosensors to detect hand shake, then shifts a lens and adjusts the optical axis to compensate. This all happens a remarkable 4,000 times per second. And because the system is optical, no image quality is lost. Thanks to Advanced O.I.S., the images you capture look incredibly clear, sharp and beautiful on a big TV screen.

O.I.S. Lens

The lens moves up/down or left/right and bends the incoming light to correct hand shake.

Without

Both the smiling faces and the background are crisp and razor-sharp. Even on a big screen, the images are virtually blur-free.

A superb optical system that captures even delicate, subtle nuances

Leica Dicomar Lens

SD9 HS9 SX5

The HD camcorders boast a Leica Dicomar lens. Developed specifically for full-HD digital camcorders, this lens system is made using a multi-coating process that prevents light reflection and glare, which can make colors bleed and images appear washed out. It also prevents rings of light, or "ghosts." *Leica is a registered trademark of Leica Microsystems IR GmbH, and Dicomar is a registered trademark of Leica Camera AG.

Washed-out image due to strong light

Multi-coated lens: clear image with no color bleeding

NEW

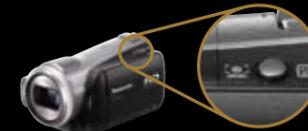

World's first face detection function for recording moving pictures with a video camera
Faces are beautiful - Even in backlit or dark places

SD9 HS9

Face Detection

It's difficult to shoot scenes with deep shadows or large differences between light and dark areas. The subject often looks too dark, and faces can be hard to see. Panasonic solves this problem with Face Detection, a function that automatically adjusts the exposure according to the ambient brightness, so faces are bright and easy to see. When the camcorder detects a face in the scene, a square frame appears around it in the LCD monitor and the exposure is adjusted to correct the brightness level. The skin tone is also smoothed. Face Detection can detect up to five faces at once. With Face Detection - offered for the first time for recording moving pictures with a video camera - Panasonic makes it easy to capture beautiful faces and clear backgrounds even in dim or backlit scenes.

The backlit faces are hard to make out.

Faces are bright and sharp.

NEW

Magnificent shots every time - when shooting, when viewing

SD9 HS9

Intelligent Shooting Guide / Selection Playback

When Shooting Intelligent Shooting Guide

This convenient function helps you choose the best shooting settings. It displays a text message in the LCD monitor, telling you which settings are best for the current conditions.

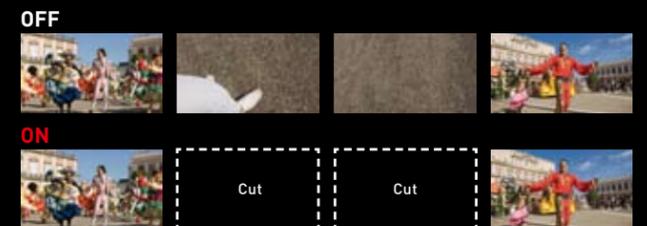

Fast Pan/Tilt: CAMERA PANNING IS TOO FAST	Hand Swing: USE O.I.S.
Backlighting: USE INTELLIGENT CONTRAST	Cancel Backlighting: CANCEL INTELLIGENT CONTRAST
Low Light: USE LOW LIGHT MODE	Cancel Low Light: CANCEL LOW LIGHT MODE

It is so dark, the subject looks dull and unattractive. A message is displayed telling you to use Low Light mode. When set to Low Light mode, the shot is beautiful.

In Playback Intelligent Shooting Selection Playback

Poor or inadvertent shots (such as shots of the ground or overly dark scenes) are skipped, and all normal scenes are played.

Examples of detectable shooting mistakes:

- Dark scenes •Fast panning/tilting •Hand swinging •Low light
- Ground shooting •Poorly focused shots

Images are recorded even before you begin shooting

SD9 HS9 SX5

Pre-Rec Function

PRE-REC. This clever function records three seconds of images even before you actually begin shooting. The images are held temporarily in the camcorder's internal memory, before recording onto the SDHC/SD Memory Card or hard disk begins. This helps ensure that you won't miss the start of a moment you want to record, such as when an event begins all of a sudden. *SX5: Effective in card recording mode.

Starts backing up in the internal memory *The camera must be aimed at the subject in advance.

Easy time setting - Both on the road and at home

SD9 HS9

World Timer

With the SD9 and HS9, setting the time is as easy as selecting a city from the displayed map. The World Timer function lets you set the time for two cities, home and destination. You don't have to figure out the time difference at your destination, and it's easy when you get home.

No more missed shooting opportunities!

SD9 HS9

0.6 sec Quick Start

In Quick Start mode*, the SD9 and HS9 are ready to record 0.6 second after the LCD is opened. You're always ready to capture the moment, even when the unexpected occurs. *This mode can be selected from the menu.

Power turns on automatically when you open the LCD!

Capturing voices over a wide area for a more lifelike sound

5.1-Channel Surround Sound System & Zoom Mic

SD9 HS9

5 Microphones and 5.1-Channel Surround Sound

Panasonic HD camcorders are equipped with five electret condenser microphones. The center mic helps capture the sound source and distance accurately, so you get a more 3-dimensional effect than you get with conventional systems, which capture all sounds from the front. You get a realistic sound space that's a perfect match with the true-to-life HD images.

*Manufactured under license from Dolby Laboratories. "Dolby" and the double-D symbol are registered trademarks of Dolby Laboratories.

Zoom Mode

In Zoom mode the microphones are linked to the lens action. When you zoom in on a subject, the microphones focus on the sound in that same direction.

Focus Mode

In this mode the microphones focus on sounds coming from right in front of you, even when the lens is not zooming.

Wide Mode

Zoom Mode

The sound zooms together with the image.

Focus Mode

The sound zooms even when the image doesn't.

Capture those spur-of-the-moment scenes

24 Frames/Second High-Speed Burst Shooting

SD9 HS9

Both the SD9 and HS9 feature high-speed burst shooting at a fast 24 frames per second. In three seconds, you can shoot up to 72 still shots. High-speed burst shooting is especially useful for shooting fast-moving objects or capturing spontaneous moments, such as in sports events and car races. Or use it to analyze your golf swing or tennis stroke.

The detail is so fine, you can even check the club head angle as it strikes the ball.

Prevents wash-out to provide more natural contrast

Intelligent Contrast Control

SD9 HS9 SX5

By detecting the intensity of the ambient light and adjusting the exposure accordingly, Intelligent Contrast Control prevents blown highlights and blocked shadows. This helps render natural-looking, highly nuanced images with proper contrast. Even when you're shooting directly toward the light source – a very challenging situation in photography – Intelligent Contrast Control lets you capture clear images with enhanced depth.

Without Intelligent Contrast Control

The man facing the sun is fine, but the woman under the parasol is in a shadow – you can't see anything there.

With Intelligent Contrast Control

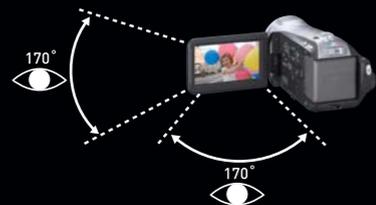

The contrast looks natural. The woman under the parasol has been brightened without making the background appear washed out.

The LCD is easy to see from any angle

Wide Viewing Angle

SD9 HS9 SX5

With 300,000 dots and exceptional detail, the new LCD is among the best in the industry. The viewing angle is 170° both vertically and horizontally, so everyone can gather around and easily see the images you just shot. The wide viewing angle is also a big help when you're taking high-angle or low-angle shots.

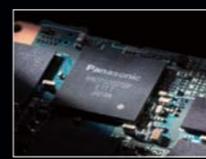

High-speed processing: An imaging engine that handles the vast amount of data in full-HD images

HD Advanced Pure Color Engine

SD9 HS9 SX5

Panasonic took the advanced imaging circuitry used in our professional equipment and adapted it for home use. The result is the HD Advanced Pure Color Engine – a high-speed processing unit that not only handles huge volumes of data, but also suppresses noise to deliver exceptionally smooth images.

HD Advanced Pure Color Engine

Record Beautiful Full-HD Video onto an SD Memory Card and DVD Disc

View Images in Beautiful Full-HD, and Archive Your Recordings Easily

Viewing SD9/HS9/SX5*1

Connect to an HDTV via an HDMI mini Cable – For Breathtaking HD

Just connect your video camera to an HDTV and you're ready for high-definition viewing. If your TV is HDMI*2 compatible, a single HDMI mini cable is all you need. When using a video component cable, you need a separate audio cable. *1 SX5 has an HDMI terminal, so you need an HDMI cable. *2 HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC.

Viewing SD9/HS9

View Recordings by Simply Inserting the SD Card into an SD Card Slot

Simply take the SDHC/SD Memory Card from your HD camcorder and slip it into the card slot on your Panasonic VIEFA PZ850 series or Blu-ray Disc Player BD30, and you're ready to view full-HD images recorded in the AVCHD format. *With other SD card slot-equipped VIEFA models, you can view JPEG format still images.

Viewing SX5

View Your Recordings on a Blu-ray Disc Player

Simply slip the DVD disc into the Blu-ray Disc player. There are no cables to connect. It's that easy. *The disc must be finalized prior to playback.

Connect your SD9, HS9 or SX5 to a VIEFA TV or compatible Blu-ray Disc player via an HDMI cable, and you can control both units in synchronized operation with a single remote control. This kind of simple, easy operation makes it even more fun to view your recordings. *With VIEFA Link, a control signal sent through the HDMI cable allows linked operation of a VIEFA TV, compatible DIGA recorder, and the SD9, HS9 or SX5. Please note that this function applies only to equipment that is compatible with VIEFA Link, and that VIEFA Link does not let you control every function of all connected equipment.

Archiving and Viewing SD9/HS9

Use a DVD Burner to Create and Play Back a DVD

Archiving The SD9's USB Host function lets you connect directly to a DVD burner via a USB cable. You can then copy recordings from the SD Memory Card to a DVD disc, maintaining their original full-HD format, by simply pressing a button.

Viewing To view the disc you just burned, simply connect the SD9 or HS9 to an HDTV via an HDMI mini cable.

*The 12-cm DVD discs that you create with a DVD burner can be played on a Blu-ray Disc player.

Editing and Archiving SD9/HS9/SX5

Archive Recordings by Selecting the Format with a PC and Burning Them onto a DVD

The software included with the HD camcorder lets you burn full-HD recordings from an SD Memory Card onto a DVD disc, using your PC. You can make a copy either in the original high-definition AVCHD format, or in the standard-definition DVD-Video format. Choose the one that matches your playback equipment.

Easy Editing Gives You More Ways to Enjoy Video HD Writer 2.5E SD9/HS9

The SD9 and HS9 also come with software that makes it easy to edit your recordings using a PC. When editing, mistaken photos such as shots of the ground or shots with hand-shake can be automatically cut* to speed up the process. After editing, you can copy the results to a DVD disc in either the AVCHD or the MPEG2 format. Choose the one that best suits your playback equipment or how you intend to use your recordings. This easy-to-use software gives you more creative ways to enjoy the recordings you make. * HD Writer 2.5E is able to read the shooting information detected by the Intelligent Shooting Guide/Selection Playback function.

Quick & Easy!

The software guides you through the simple steps. You'll find editing easy to do, even if it's your first time.

*This is a guideline that includes time for operations such as starting and stopping the recording, turning the power on and off, and zooming. *The actual time is shorter.

*We recommend using SD Memory Cards and SDHC Memory cards conforming to class 2 or higher of the SD Speed Class Rating or the following SD Memory Cards made by Panasonic for motion-image recording. *Please confirm the latest information about SD/SDHC Memory Cards that can be used for motion-image recording, on the following website. http://panasonic.co.jp/pavc/global/cs/e_cam [This website is in English only.]

Get Ready for Video Action Even in Seawater The Tough, Active SD Card Camcorder SW20

SD Camcorder Card

Bring the Fun of Shooting Video Everywhere You Go

SDR-SW20

Optical Zoom	Maximum Recording Time (Continuous Recording Time)	Battery Life (Continuous Recording Time)	MPEG 2
10x	16GB SD 13h 20min*	1h 10min	MPEG 2

*SD/SDHC Memory Card is not included. * In LP mode

SDR-S7

Optical Zoom	Maximum Recording Time (Continuous Recording Time)	Battery Life (Continuous Recording Time)	MPEG 2
10x	16GB SD 13h 20min*	1h 10min	MPEG 2

*SD/SDHC Memory Card is not included. * In LP mode

The Smart, Compact SD Card Camcorder S7

Built tough so you can shoot in places never before possible

SW20 Triple Proofing

*Waterproof and dustproof characteristics have been evaluated by TUV Rheinland.

Waterproof up to 5 feet*

Take the SW20 underwater as deep as 5 feet and get some great video shots in the pool or ocean. Swim along with tropical fish, capture shots of a beautiful coral reef, or get action footage of a friend snorkeling. Waterproofing also means you can shoot in the rain or snow with no worries. *IEC60529 IPX8

Shockproof up to 4 feet*

The SW20 is designed to resist damage even if dropped from a height of up to 4 feet. We fortified the outer body casing, making it thicker to improve rigidity and strength. Inside, we provided an intermediate resin chassis to cushion and protect the main circuit board and lens.

*The S10P1 is also shockproof to 4 feet. *MIL-STD-810F METHOD 516.5 SHOCK

Dustproof*

A dustproof design keeps the SW20 safe even if handled with dirty hands or used in a place with swirling dust. The SW20 is protected against sand too, so you can take it to the beach or sports field with no worries. And it's waterproof, so if the body gets dirty you can simply wash it off with water. *IEC60529 IP5X

Fun to carry around every day!

Compact Size and Cool Styling

SW20 S7

Small enough to slip in a pocket or bag. Cool enough to take everywhere you go. This is one stylish camcorder you'll never want to be without.

Dimensions (W x H x D)	Weight
S7: 1.6 x 2.3 x 4.0 inches SW20: 1.33 x 2.50 x 4.54 inches	S7: 0.36 lb SW20: 0.49 lb

No more missed shooting opportunities!

0.6 sec Quick Start

SW20 S7

The SD camcorder starts up to record quickly. In Quick Start mode*, the SW20 and S7 begin recording in just 0.6 second from the time the LCD is opened. This lets you catch those sudden shooting opportunities.

*This mode can be selected from the menu.

Capture even complex motion with precision

MPEG2 Engine

SW20 S7 S10P1

Panasonic's MPEG2 engine is a wide-range, high-precision engine that produces smooth, beautiful moving pictures. Because it precisely records the differences in each frame, it can render fast, complex motions with exceptional precision. The MPEG2 engine also uses the Variable Bit Rate system that Panasonic adopted for the high-end DIGA DVD recorder. Giving LP (long play mode) recordings nearly twice the resolution captured with previous Panasonic MPEG2 recording video cameras, this lets the SD camcorder record clear, smoothly flowing pictures.

Conventional

Model with MPEG2 engine

Images are recorded even before you begin shooting Pre-Rec Function

PRE-REC. This clever function records three seconds of images even before you actually begin shooting. The images are held temporarily in the camcorder's internal memory, before recording onto the SDHC/SD Memory Card begins. This helps ensure that you won't miss the start of a moment you want to record, such as when an event begins all of a sudden.

Without Pre-Rec. The starting scene is missing.

With Pre-Rec. Starts backing up in the internal memory

*The camera must be aimed at the subject in advance.

Easy time setting - Both on the road and at home World Timer

With the SW20 and S7, setting the time is as easy as selecting a city from the displayed map. The World Timer function lets you set the time for two cities, home and destination. You don't have to figure out the time difference at your destination, and it's easy when you get home.

Home

Select the time zone from the map. Set New York time for home.

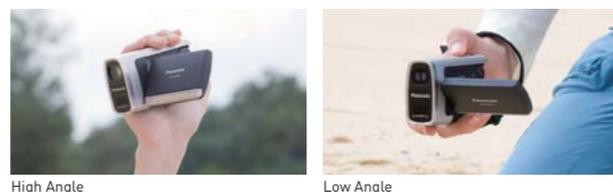

Destination

Select the time zone from the map. Set London time for destination.

The times for the two registered locations can be switched with the press of a button.

Easy shooting at high or low angles Sub Rec Button

You can freely adjust the angle of the LCD monitor for comfortable viewing no matter how you're holding the camera. The Sub Rec button on the side makes it easy to shoot when you're holding the camera low. The buttons are laid out simply and logically for easy one-hand operation.

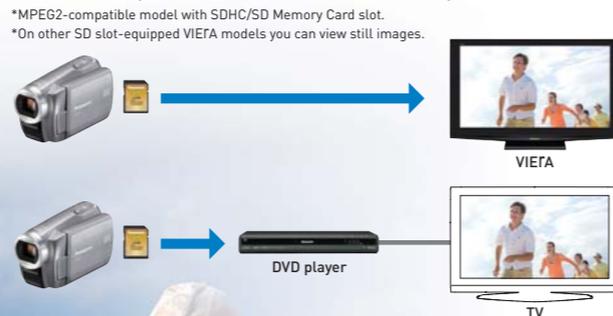

Easy archiving with a DVD burner Easy Copying to a DVD Disc

The SD camcorder has a USB port (host function) that lets you connect directly to a DVD burner. Copying a recording from an SD card to a DVD disc is easy as selecting from the menu.

For TVs or DVD players with an SD card slot View Recordings Easily - No Cable to Connect

Just take the SDHC/SD card from your SD camcorder and slip it into your Panasonic VIEFA TV* or DIGA DVD player*, and you're ready to view the beautiful video you shot. There are no cables to worry about.

Anyone can enjoy easy, versatile video editing! MotionSD STUDIO 1.3E/1.2E

1 Transfer Data Transfer the motion images to your PC

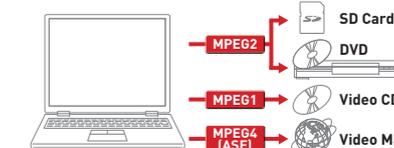

You can transfer the motion-image data from the SDHC/SD Memory Card right to your PC.

2 Edit Quick and easy

It's easy to put scenes in a different order and delete the ones you don't want. This software also includes a wide variety of video effects.

3 Save the Results Choose how you want to save it

You can burn your video production onto a DVD disc. Or you can convert it to MPEG4 and attach it to e-mail or post it on a Website. *Requires CD writing software.

Take it on the road. Hard disk offers extended recording time

50x Zoom and Advanced O.I.S. (Optical Image Stabilization)

HDD Camcorder Hard Disk Drive

Enjoy Longer Non-Stop Shooting Fun

SDR-H60

60GB HDD / 54 h Rec.

2.7" WIDE LCD

Optical Zoom	Maximum Recording Time	Battery Life (Continuous Recording Time)
50x	54 h*1	14 h 30 min*2

*1 In LP mode *2 When using the separately purchased VW-VBG6 battery pack and VW-VH04 battery pack holder kit, and recording onto an SDHC/SD Memory card.

SDR-H40

40GB HDD / 36 h Rec.

2.7" WIDE LCD

Optical Zoom	Maximum Recording Time	Battery Life (Continuous Recording Time)
42x	36 h*1	14 h 30 min*2

*1 In LP mode *2 When using the separately purchased VW-VBG6 battery pack and VW-VH04 battery pack holder kit, and recording onto an SDHC/SD Memory card.

60GB*1 hard disk holds up to 54 hours

Holding as much data as 43 DVD discs, the internal hard disk lets you record continuously for up to 54 hours*2 without changing a disc, tape or other recording media.

*1 A 60GB hard disk utilizes a portion of the storage space for formatting and other purposes. Usable capacity will be less. 1 GB means 1,000,000,000 bytes. *2 In LP mode

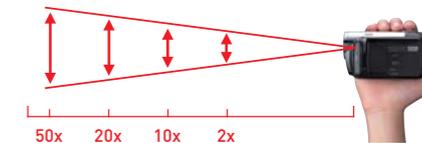

Anti-Shock Shield: Helps protect recorded video data from damage due to jolts and impact

- The Drop Detect function senses if the camera is falling and moves the head away from the hard disk.
- The Floating Structure protects the hard disk should the camera fall or be dropped.
- The Buffer Memory automatically backs up data, while the camera is falling.

If you have a powerful zoom, you need optical image stabilization

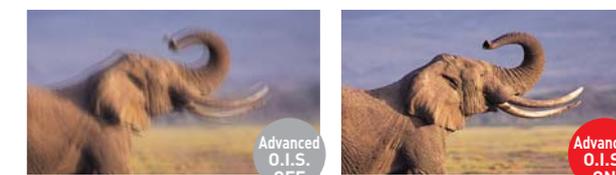

Advanced O.I.S. and 50x Optical Zoom

This 50x zoom lens has the power you need to take dramatic closeups or get remarkable shots of even distant subjects. But with long-distance zoom shots, even a tiny bit of hand shake has a huge effect on picture quality. That's where image stabilization comes in. Panasonic's Advanced O.I.S. (Optical Image Stabilization) shifts a corrective lens as you shoot to eliminate the effects of hand shake, so you get clear, sharp, blur-free shots even at high zoom levels. It's an essential feature for getting the most out of this incredible zoom lens. *H40: 42x optical zoom

Advanced O.I.S. (Optical Image Stabilization)

Panasonic's Advanced O.I.S. is a new image stabilizing function that achieves around eight times higher precision than our previous system. The system uses gyro-sensors to detect hand-shake, then shifts a lens and adjusts its optical axis to compensate. Advanced O.I.S. enables finer, more effective hand-shake compensation.

Easy archiving with a DVD burner

One-Touch DVD Copying

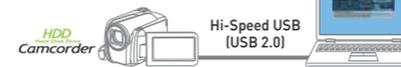

The HDD camcorder's USB Host function lets you connect directly to a DVD burner via a USB cable. You can then copy recordings from the hard disk to a DVD disc by simply pressing a button.

Anyone can enjoy easy, versatile editing!

Multi-Format Recording

(DVD-RAM, DVD-RW, DVD-R DL, DVD-R)

You can choose whichever type of disc works best with your DVD player or recorder.

Easy Shooting, Easy Viewing

1 Quick, easy operation.

The DVD camcorder automatically finds a blank section on the disc for recording. The index screen makes it easy to search for a particular scene. You can view, delete and edit quickly and easily.

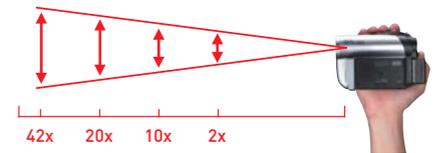

2 Easy, direct networking.

When you finish shooting, just take the disc from your DVD camcorder and slip it right into your DVD player or recorder. There's no need to connect any cables and you can start viewing right away.

If you have a powerful zoom, you need optical image stabilization

Advanced O.I.S. and 42x Optical Zoom

This 42x zoom lens has the power you need to take dramatic closeups or get remarkable shots of even distant subjects. But with long-distance zoom shots, even a tiny bit of hand shake has a huge effect on picture quality. That's where image stabilization comes in. Panasonic's Advanced O.I.S. (Optical Image Stabilization) shifts a corrective lens as you shoot to eliminate the effects of hand shake, so you get clear, sharp, blur-free shots even at high zoom levels. It's an essential feature for getting the most out of this incredible zoom lens.

Advanced O.I.S. (Optical Image Stabilization)

Panasonic's Advanced O.I.S. is a new image stabilizing function that achieves around eight times higher precision than our previous system. The system uses gyro-sensors to detect hand-shake, then shifts a lens and adjusts its optical axis to compensate. Advanced O.I.S. enables finer, more effective hand-shake compensation.

Using your familiar DVD player makes it so easy

View Your Recordings on a DVD Player

Simply slip the DVD disc into the DVD player. There are no cables to connect. It's that easy. *The disc must be finalized prior to playback.

Anyone can enjoy easy, versatile editing!

If you have a powerful zoom, you need optical image stabilization

Advanced O.I.S. and 42x Optical Zoom

This 42x zoom lens has the power you need to take dramatic closeups or get remarkable shots of even distant subjects. But with long-distance zoom shots, even a tiny bit of hand shake has a huge effect on picture quality. That's where image stabilization comes in. Panasonic's Advanced O.I.S. (Optical Image Stabilization) shifts a corrective lens as you shoot to eliminate the effects of hand shake, so you get clear, sharp, blur-free shots even at high zoom levels. It's an essential feature for getting the most out of this incredible zoom lens.

Triple beauty — remarkable color, detail and gradation

GS320

3CCD Camera System

Most professional broadcasting cameras use the 3CCD camera system, with its superb color reproduction. The advanced 3CCD camera system uses three distinct CCDs for processing, so there is absolutely no light loss. You can see the results in beautifully rendered images with vivid color, fine detail, and rich gradation.

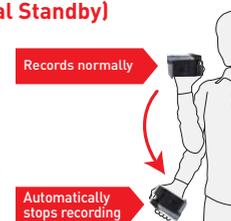

Helps prevent wasted shots

GS320

AGS (Auto Ground-Directional Standby)

The O.I.S. linear motor system can detect when the camera is in an unusual shooting position — when you've inadvertently left it on in recording mode. In these cases, the camera automatically stops recording, saving both battery power and disc space.

*This mode can be selected from the menu.

Exceptional Leica-certified image quality

GS320

Leica Dicomar Lens

The GS320 boasts a Leica Dicomar lens. Developed specifically for digital video cameras and featuring original optical technology from Leica, this advanced lens captures clear, crisp, finely nuanced images with outstanding detail and contrast. Also, the lens was manufactured using a multi-coating process that reduces flare and ghosts. *Leica is a registered trademark of Leica Microsystems IR GmbH, and Dicomar is a registered trademark of Leica Camera AG.

For shooting even in dim lighting

GS90

LED Video Light

When illumination is insufficient, turn on the built-in LED video light to take crisp, colorful movies. The LED (light emitting diode) has low power consumption, long service life, and the safety of a low operating temperature.

Anyone can enjoy easy, versatile editing!

GS320

Quick Movie Magic 1.0E & MotionDV STUDIO 5.6E LE for DV

1 Transfer Data

Transfer the motion images to your PC

A USB cable lets you connect your camera to your PC, making it easy to transfer the motion images.

2 Edit

Quick and easy

[For Beginners] Quick Movie Magic 1.0E Step-by-step instructions are shown right on the monitor.

[For Advanced Users] MotionDV STUDIO 5.6E LE for DV This includes a wide variety of titles, video effects and transition.

3 Save the Results

Choose how you want to save it

You can save the results in AVI format, convert it to the MPEG1 format or convert it to MPEG4 format. You can also burn your video productions onto a DVD disc*. *Requires DVD writing software.

Functions that Give You More Shooting Flexibility

High-performance image processing

Advanced Pure Color Engine and Pure Color Engine

The Advanced Pure Color Engine is a special image processing circuit for 3CCD camera systems. It processes the R.G and B signals from the three CCDs individually, so it gives both moving and still pictures exceptional quality. And the Pure Color Engine converts the CCD output signal from a complementary color signal into an RGB signal at an early stage and extracts the low-frequency luminance component from the RGB signal. This innovative engine also achieves truly superb color reproduction for high-zoomed pictures.

For easy, intuitive setting and shooting without taking your eyes off the subject

One-Touch Navigation

With One-Touch Navigation, just press the center of the joystick to display an operating menu. The operations you use most often are right on the monitor, so it's easy to change settings or operate the camera without looking away from your subject.

Mode Dial

Just turn the dial and you're ready to shoot or to view the images afterward. Rotate the dial with your fingertip to select the icon that corresponds to the mode you want.

Operation Icon Examples (HS9)

	Backlight Compensation		FadelIN/FadeOUT
	Help Mode		Soft Skin Mode
	Contrast Mode		MagicPix

*Icon display varies depending on the model.

An LCD that's easy to see - indoors or out

Power LCD

Simply press the Power LCD button and the LCD becomes brighter, making it easier to see outdoors or in other bright locations.

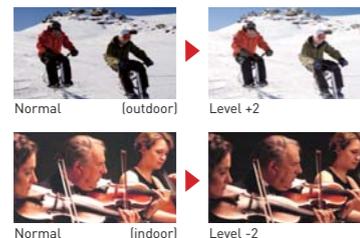

Power LCD Extra

Power LCD Extra lets you adjust the LCD brightness in two steps by simply pressing the Power LCD button. Plus 1 mode increases brightness by 80% for easy outdoor viewing, and Plus 2 mode emphasizes contrast when shooting in strong sunlight conditions such as when skiing or at the beach.

Power LCD Plus

You can set the LCD to any of five brightness levels for optimal viewing in a variety of lighting conditions. When shooting outdoors on a sunny day, make the LCD brighter. When shooting indoors, lower it. This not only makes the LCD easier to see, it's also easier on your eyes.

Give your subjects smoother looking skin

Soft Skin Detail

When this function detects skin tones, it softens the focus in that area. This has a skin beautifying effect, which makes wrinkles and lines appear less noticeable. When turned on, this function makes blemishes and moles look less conspicuous, while preserving resolution in areas of the picture outside of the skin.

Capture crisp, vivid images, even in low lighting

MagicPix®

Leave the light off. MagicPix® gives you images with color even in dim lighting (1 lux). Light from the LCD is gentle and easy on the eyes, so you can snap shots of sleeping children without waking them up.
