

Setup Instructions

TriFlector

Style: 2930

Description

Create a tunnel of light with a single light source. Three interconnected reflectors allow you to achieve total wraparound lighting. Can be used both as a flat horizontal or vertical reflector.

Product Contains

- [1] TriFlector Framework with ball joint
- [3] Silver/White Panels

Instructions

- Attach to a light stand. The ball joint allows for exact positioning.
- First, evenly light your subject.
- We suggest using a hairlight (such as the Westcott Strip Bank) to help separate the subject from the background and a main light placed up high and pointed at an angle downward. A background light may be used as well.
- Position the **Triflector™** right underneath the subject and the panels positioned to where you want the highlights to appear.
