

353AAV Plus 90x
4-Way Multipoise Condensing Gas Furnace
Input Rates: 40,000 Only

Product Data

4-WAY MULTIPOISE DESIGN ALLOWS MORE APPLICATIONS

A05085

A UNIQUE SEER SOLUTION

The *Plus 90x* is an exciting addition to your product line. This high-efficiency 4-way multipoise design furnace allows more applications while the ECM motor and Bryant's control logic combine to provide a SEER increase of up to 1.5 points.*

Some of Bryant's best-engineered components contribute to the efficient performance of this condensing furnace. The *Plus 90x* utilizes Power Light™ hot surface ignition (HSI), which ignites the burners directly. HSI eliminates gas waste that typical continuous-pilot designs can bring. Hot surface ignition has proven to contribute to reliable start-up and operation of Bryant furnaces.

Another deluxe feature included with this furnace is Bryant's trusted Everlastic™ secondary heat exchanger; a patented polypropylene laminate that provides exceptional heat transfer and corrosion resistance. Using the exclusive flow-through design, the secondary heat exchanger reduces the pressure drop in

the furnace resulting in lower electrical usage. The high efficiency achieved by superior heat transfer is made only better—by optimizing the efficient ECM motor speed tap locations.

A standard media filter cabinet accessory is provided with the *Plus 90x* in order to provide an opportunity to enhance indoor air quality. As with all other Bryant furnaces, this model is designed to work as a part of the total home comfort system which includes elements for cooling, air cleaning, humidification, ventilation and zoning. Boosting the unit's efficiency with the ECM motor and Bryant's deluxe features show the *Plus 90x* has been designed with the homeowner in mind.

PLUS 90X FEATURES & BENEFITS

Everlastic™ — Exclusive Everlastic coating, a patented polypropylene laminate is used on the secondary heat exchanger and greatly reduces maintenance.

Perfect Light™ Igniter — Bryant's unique Perfect Light™ igniter is not only physically robust but it is also electrically robust. It is capable of running at line voltage and does not require complex voltage regulators as do other brands. This unique feature further enhances the reliability of the *Plus 90x* gas furnace and continues Bryant's tradition of technology leadership and innovation in providing a reliable and durable product.

FanOn™ — Improves comfort all year long by allowing the homeowner to select different fan speeds during continuous fan operation to achieve more or less airflow. This is done right at the thermostat.

SmartEvap™ — This feature allows your system to reduce summertime humidity levels by nearly 10% over standard systems.

Media Filter Cabinet — Enhanced indoor air quality in your home is made easier with our media filter cabinet—a standard accessory on all Deluxe furnaces. When installed as a part of your system, this cabinet allows for easy and convenient addition of a Bryant high-efficiency air filter.

Control Center — Microprocessor controls sequencing and furnace operation. Equipped with a component test feature and status indicator light to assist in troubleshooting. Microprocessor controls blower times to start blower after main burners ignite to eliminate cold air blowing into rooms.

*as compared to the Air-Conditioning, Heating and Refrigeration Institute's standard coil-only rating (A/Cs up to 3.5 tons) when paired with selected Bryant evaporator coils.

353AAV

Direct or Non-direct Venting — The *Plus 90x* can be installed as a 1 pipe/Non-Direct vent (except 140 size unit and in manufactured/mobile home installations) or 2 pipe/Direct vent furnace. All direct vent *Plus 90x* models can be installed in a manufactured (mobile) home when the optional kit is used. This provides added flexibility to meet diverse installation needs.

Insulated Blower Compartment —The acoustical insulation reduces air and motor noise to promote quiet operation.

Combustion Products Venting — The combustion-air and vent pipes can terminate through a side wall or through the roof when used with a factory-authorized vent termination kit.

Insulation — Foil-faced insulation in heat exchanger section of the casing minimizes heat loss.

Bottom Closure — Factory-installed for side return; easily removable for bottom return.

Filter — Cleanable filter with retainer is standard.

Blower Access Panel Switch — Shuts off all 115-v power through furnace components whenever blower access panel is opened.

Casing — One piece, seamless wrap-around construction of heavy, galvanized steel that resists corrosion.

Adjustable Blower Speed — For precise airflow selection of heating or cooling operation.

Monoport Burners — The burners are finely tuned for smooth, quiet combustion plus economical gas usage.

Slow Opening Redundant Gas Valve — Shuts off gas to burners if any of the valves fails to close completely for any reason. The slow opening feature reduces start-up noise from rapid ignition.

Quality Registration — The *Plus 90x* is engineered and manufactured under an ISO 9001 registered quality system.

Certifications — The *Plus 90x* Model units are CSA (A.G.A. and C.G.A.) design certified for use with natural and propane gases. The furnace is factory-shipped for use with natural gas. A CSA (A.G.A./C.G.A.) listed gas conversion kit is required to convert furnace for use with propane gas. The efficiency is GAMA efficiency rating certified. The *Plus 90x* meets California Air Quality Management District emission requirements. Refer to Vent Table, for elevation limitations.

A02172

353AAV

A08421

1. Burner sight glass for viewing burner flame.
2. Burner assembly (inside), operates with energy-saving, inshot burners and hot surface igniter for safe, dependable heating.
3. Combustion-air intake connection to ensure contaminant-free air (right or left side).
4. Redundant gas valve, safe, efficient, features 1 gas control with 2 internal shutoff valves.
5. Junction box for 115-v electrical power supply. (right or left side)
6. Vent outlet uses sealed PVC pipe to carry vent gases from the furnace's combustion system (right or left side).
7. Secondary condensing heat exchanger (inside), wrings out more heat through condensation of gases. Constructed with polypropylene-laminated steel to ensure durability.
8. Pressure switch ensures adequate flow of flue products through furnace and out vent system.
9. Inducer motor pulls hot flue gases through the heat exchangers, maintaining negative pressure for added safety.
10. Condensate drain connection collects moisture condensed during the combustion process.
11. Heavy-duty blower circulates air across the heat exchangers to transfer heat into the home.
12. Air filter and retainer may be used for side or bottom return application.
13. Rollout switch (manual reset) to prevent overtemperature in burner area.
14. Primary serpentine heat exchanger (inside). Stretches fuel dollars with the S-shaped heat-flow design. Solid weld-free construction of corrosion-resistant aluminized steel means reliability.
15. A 3-amp fuse provides electrical and component protection.
16. Light emitting diode (LED) on control center. Code lights are for diagnosing furnace operation and service requirements.
17. Control center.
18. Blower access panel safety interlock switch.
19. Transformer (24v) behind control center provides low-voltage power to furnace control center and thermostat.
20. Power choke (used with 1 HP and 3/4 HP motors.)

*Factory–authorized and field–installed. Gas conversion kits are CSA (A.G.A./C.G.A.) recognized

Required for installation on combustible floors when no coil box is used, or when any coil box other than a Bryant cased coil is used.

*Model HP and 2S thermostat must be field converted to air conditioner operation.

†Thermidistat™ Control control can be configured for multiple use and staging. It must be configured for each specific application.

‡Dual Fuel thermostat is used with furnace and heat pump application.

353AAV

A93086

CONCENTRIC VENT (DIRECT VENT/ 2-PIPE ONLY)

A concentric vent kit allows vent and combustion-air pipes to terminate through a single exit in a roof or side wall.

One pipe runs inside the other allowing venting through the inner pipe and combustion air to be drawn in through the outer pipe.

A88202

DOWNFLOW SUBBASE

One base fits all furnace sizes. The base is designed to be installed between the furnace and a combustible floor when no coil box is used or when a coil box other than a Bryant cased coil is used. It is CSA (A.G.A./C.G.A.) design certified for use with select Bryant furnaces when installed in downflow applications.

A96214

BRYANT CASED N-COIL (as shown)

The Bryant Cased N-Coil or A-Coil is an upflow/downflow furnace coil which can also replace the downflow subbase when installing select Bryant furnaces on combustible flooring in the downflow orientation.

A08450

A97432

CONTROLS: THERMOSTATS AND ZONING

Available in programmable and non-programmable models, Bryant thermostats maintain a constant, comfortable temperature level in the home.

For the ultimate in home comfort, Bryant's 2, 4, and 8-zone systems allow temperature control of individual "zones" of the home. This is accomplished through a series of electronic dampers and remote room sensors. The 4-zone system is shown.

C04009

MECHANICAL OR ELECTRONIC AIR CLEANER

Cleans the air of smoke, dirt, and many pollens commonly found. Saves decorating and cleaning expenses by keeping carpets, furniture, and drapes cleaner.

Electronic air cleaner is shown.

A01484

HUMIDIFIER

By adding moisture to winter-dry air, a Bryant humidifier can often improve comfort and keep furniture, rugs, and draperies in better condition. Moisturizing household air also helps to retain normal body heat and provides comfort at lower temperatures.

ENERGY/HEAT RECOVERY VENTILATOR

Bryant's energy or heat recovery ventilators exhaust stale indoor air and provide fresh outdoor air to the home while minimizing heat loss and humidity level. Especially useful for today's tighter constructed houses.

Energy recovery ventilator is shown.

CLEARANCE TO COMBUSTIBLES

INSTALLATION

- This forced air furnace is equipped for use with natural gas at altitudes 0 - 10,000 ft (0 - 3,050m), except 140 size furnaces are only approved for altitudes 0 - 7,000 ft (0 - 2,135m).
- An accessory kit, supplied by the manufacturer, shall be used to convert to propane gas use or may be required for some natural gas applications.
- This furnace is for indoor installation in a building constructed on site. This furnace may be installed in a manufactured (mobile) home when stated on rating plate and using factory authorized kit.
- This furnace may be installed on combustible flooring in alcove or closet at **Minimum Inches Clearance To Combustible Construction** as described below.
- This furnace requires a special venting system. Refer to the installation instructions for parts list and method of installation. In the US this furnace is for use with schedule-40 PVC, PVC-DWV, CPVC, or ABS-DWV pipe, and must not be vented in common with other gas-fired appliances. In Canada, refer to installation instructions for vent materials. Construction through which vent/air intake pipes may be installed is maximum 24 inches (610 mm), minimum 3/4 inches (19 mm) thickness (including roofing materials).
- Cette fournaise à air pulsé est équipée pour utilisation avec gaz naturel et altitudes comprises entre 0 - 3,050m (0 - 10,000 pi), excepté queles fournaises de 140 taille sont pour altitudes comprises entre 0 - 2,135m (0 - 7,000pi).
- Utiliser une trousse de conversion, fournie par le fabricant, pour passer au gaz propane ou pour certaines installations au gaz naturel.
- Cette fournaise à air pulsé est pour installation à l'intérieur dans un bâtiment construit sur place. Cette fournaise à air pulsé peut être installée dans une maison préfabriquée (maison mobile) si prescrit par la plaque signalétique et s'il on utilise une trousse spécifiée par le fabricant.
- Cette fournaise peut être installée sur un plancher combustible dans un enfoncement ou un placard en observant les **Dégagement Minimum En Pouces Avec Éléments De Construction Combustibles**.
- Cette fournaise nécessite un système d'évacuation spécial. La méthode d'installation et la liste des pièces nécessaires figurent dans les instructions d'installation. Aux Etats-Unis, cette fournaise doit s'utiliser avec la tuyauterie des nomenclatures 40 PVC, PVC-DWV, CPVC, ou ABS-DWV et elle ne peut pas être ventilée conjointement avec d'autres appareils à gaz. Au Canada, referer aux instructions d'installation pour lex matériaux à ventiler. Épaisseur de la construction au travers de laquelle il est possible de faire passer les tuyaux d'aération (admission/évacuation): 24 po (610 mm) maximum, 3/4 po (19mm) minimum (y compris la toiture).

For upflow and downflow applications, furnace must be installed level, or pitched within 1/2" (12.7mm) of level. For a horizontal application, the furnace must be pitched minimum 1/4" (6.35mm) to maximum of 1/2" (12.7mm) forward for proper drainage. See Installation Manual for IMPORTANT unit support details on horizontal applications.

Pour des applications de flux ascendant et descendant, la fournaise doit être installée de niveau ou inclinée à pas plus de 1/2" (12.7mm) du niveau. Pour une application horizontale, la fournaise doit être inclinée entre minimum 1/4" (6.35mm) et maximum 1/2" (12.7mm) du niveau pour le drainage approprié. En cas d'installation en position horizontale, consulter les renseignements IMPORTANTS sur le support dans le manuel d'installation.

LEVEL 0" (0) TO 1/2" (12.7mm) MAX

MIN 1/4" (6.35mm) TO 1/2" (12.7mm) MAX

UPFLOW OR DOWNFLOW

HORIZONTAL

MINIMUM INCHES CLEARANCE TO COMBUSTIBLE CONSTRUCTION

ALL POSITIONS:

- * Minimum front clearance for service 24 inches (610mm).
- † † 140 size furnaces require 1 inch back clearance to combustible materials.

DOWNFLOW POSITIONS:

- † For installation on combustible floors only when installed on special base No. KGASB0201ALL or NAHA01101SB, Coil Assembly, Part No. CAR, CAP, CNPV, CNRV or Coil Casing, Part No. KCAKC, or WENC or WTNC.

HORIZONTAL POSITIONS:

Line contact is permissible only between lines formed by intersections of top and two sides of furnace jacket, and building joists, studs, or framing.

§ Clearance shown is for air inlet and air outlet ends.

Ø 120 and 140 size furnaces require 1 inch bottom clearance to combustible materials.

DÉGAGEMENT MINIMUM EN POUCES AVEC ÉLÉMENTS DE CONSTRUCTION COMBUSTIBLES

POUR TOUS LES POSITIONS:

- * Dégagement avant minimum de 24 po (610mm) pour l'entretien.
- † † Pour les fournaises de 140 taille, 1 po (25mm) dégagement des matériaux combustibles est requis au-arrière.

POUR LA POSITION COURANT DESCENDANT:

- † Pour l'installation sur le plancher combustible seulement quand on utilise la base spéciale, pièce n° KGASB0201ALL ou NAHA01101SB, l'ensemble serpentin, pièce n° CAR, CAP, CNPV, CNRV, ou le carter de serpentin, pièce n° KCAKC ou WENC ou WTNC.

POUR LA POSITION HORIZONTALE:

Le contact n'est permis qu'entre les lignes formées par les intersections du dessus et des deux côtés de la chemise de la fournaise, et des solives, des montants ou de la charpente du bâtiment.

§ La distance indiquée concerne l'extrémité du tuyau d'arrivée d'air et l'extrémité du tuyau de sortie d'air.

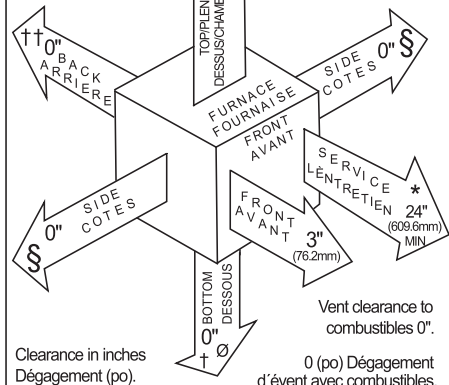

Ø Pour les fournaises de 120 et 140 taille, 1 po (25mm) dégagement des matériaux combustibles est requis au-dessous.

This furnace is approved for UPFLOW, DOWNFLOW and HORIZONTAL installations.

Cette fournaise est approuvée pour l'installation HORIZONTALE et la circulation d'air VERS LE HAUT et VERS LE BAS.

Clearance arrows do not change with furnace orientation.

Les flèches de dégagement ne change pas avec l'orientation de la générateur d'air chaud.

‡ • Airflow shown is for bottom only return—air supply with factory supplied 3/4-in. (19 mm) washable filter(s).

For air delivery above 1800 CFM, see Air Delivery table for other options.

An airflow reduction of up to 7% may occur when using the factory—specified 4 5/16-in. (110 mm) wide, high efficiency media filter.

For best furnace efficiency when using the 4 5/16-in. (110 mm) wide media filter, adjust the blower speed tap to near the mid—point of the rise range.

For horizontal and downflow applications, use one side or bottom or bottom only as airflow reference.

* Disk usage-Unless otherwise specified, use perforated disk assembly (factory-supplied in loose parts bag).

If one disk is stated, separate 2 halves of perforated disk assembly and use shouldered disk half. When using shouldered disk half, install screen side toward inlet box.

† Wide radius elbow.

‡ Vent sizing for Canadian installations over 4500 ft (1370 M) above sea level are subject to acceptance by the local authorities having jurisdiction. NA-Not Allowed; pressure switch will not make.

NOTES:

1. Do not use pipe size greater than those specified in table or incomplete combustion, flame disturbance, or flame sense lockout may occur.
2. Size both the combustion-air and vent pipe independently, then use the larger diameter for both pipes.
3. Assume two 45° elbows equal one 90° elbow. Wide radius elbows are desirable and may be required in some cases.
4. Elbows and pipe sections within the furnace casing and at the vent termination should not be included in vent length or elbow count.
5. The minimum pipe length is 5 ft (1.5 M) for all applications.
6. Use 3-in. (76 mm) diameter vent termination kit for installations requiring 4-in (102 mm) diameter pipe.

Single-Stage/Deluxe Gas Furnace

353AAV

GENERAL

System Description

Furnish a _____ (4-way multipoise) fixed capacity gas-fired condensing furnace for use with natural gas or propane (factory authorized conversion kit required for propane); furnish cold air return plenum; furnish external medial cabinet for use with accessory media filter or standard filter.

Quality Assurance

Unit will be designed, tested and constructed to the current ANSI Z 21.47/CSA 2.3 design standard for gas-fired central furnaces.

Unit will be 3rd party certified by CSA to the current ANSI Z 21.47/CSA 2.3 design standard for gas-fired central furnaces.

Unit will carry the CSA Blue Star® and Blue Flame® labels.

Unit efficiency testing will be performed per the current DOE test procedure as listed in the Federal Register.

Unit will be certified for capacity and efficiency and listed in the latest GAMA Consumer's Directory of Certified Efficiency Ratings.

Unit will carry the current Federal Trade Commission Energy Guide efficiency label.

Delivery, Storage and Handling

Unit will be shipped as single package only and is stored and handled per unit manufacturer's recommendation.

Warranty (for inclusion by specifying engineer)

U.S. and Canada only. Warranty certificate available upon request.

PRODUCTS

Equipment

Components shall include: slow-opening gas valve to reduce ignition noise, regulate gas flow, with electric switch gas shut-off; flame proving sensor, hot surface igniter, pressure switch assembly verifies inducer operation; flame rollout switch, drain tubing and installed condensate drain trap, blower and inducer assembly, 40va transformer; low-voltage (heating) (heating/cooling) thermostat.

Blower Wheel and Blower Motor

Galvanized blower wheel shall be centrifugal type, statically and dynamically balanced. Blower motor of ECM type shall be permanently lubricated with sealed bearings, of _____ hp, and shall be multiple-speed direct drive. Blower motor shall be soft mounted to the blower scroll to reduce vibration transmission.

Filters

Furnace shall have reusable-type filters. Filter shall be _____ in (x) _____ in. An accessory high efficiency Media Filter is available as an option. _____ Media Filter.

Casing

Casing shall be of .030 in. (.03 mm) thickness minimum, pre-painted galvanized steel.

Inducer Motor

Inducer motor shall be soft mounted to reduce vibration transmission.

Primary Heat Exchangers

Primary Heat exchangers shall be 3-Pass 20 gauge corrosion resistant aluminized steel of fold-and-crimp sectional design, which operates under negative pressure.

Secondary Heat Exchangers

Secondary Heat exchangers shall be of a flow-through design having a patented interior laminate coating of polypropylene for greater corrosion resistance with fold-and-crimp design, which operates under negative pressure.

Controls

Controls shall include a microprocessor based integrated electronic control board with at least 11 service troubleshooting codes displayed via diagnostic flashing LED light on the control, has ability to store fault codes, when activated a self-test feature checks all major functions of the furnace within one minute, and a replaceable automotive-type circuit protection fuse. Multiple operational settings available including separate blower speeds. Cooling airflow will be selectable between 350 or 400 CFM per ton of air conditioning. Features will also include temporary reduced airflow in the cooling mode for improved dehumidification when a Thermidistat® is selected as the thermostat.

Operating Characteristics

Heating Capacity shall be _____ Btuh input; _____ Btuh output capacity. Fuel Gas Efficiency shall be 93% AFUE. Air delivery shall be _____ CFM minimum at 0.50 in. wc. external static pressure. Dimensions shall be: depth _____ in.; width _____ in.; height _____ in. (casing only). Height shall be _____ in. with A/C coil and _____ in. overall with plenum.

Electrical Requirements

Electrical supply shall be 115 volts, 60 Hz, single-phase (nominal). Minimum wire size shall be _____ AWG; maximum fuse size or HACR-type, designated circuit breaker shall be _____ Amps.

Special Features

Refer to section of the product data sheet identifying accessories and descriptions for specific features and available enhancements.
