IMPORTANT SAFETY INFORMATION. READ ALL INSTRUCTIONS BEFORE USING.

A WARNING!

For your safety, the information in this manual must be followed to minimize the risk of fire, electric shock or personal injury.

₩ ا

SAFETY PRECAUTIONS

Use this appliance only for its intended purpose as described in this Owner's Manual.

- This air conditioner must be properly installed in accordance with the Installation Instructions before it is used.
- Never unplug your air conditioner by pulling on the power cord. Always grip plug firmly and pull straight out from the receptacle.
- Repair or replace immediately all electric service cords that have become frayed or otherwise damaged. Do not use a cord that shows cracks or abrasion damage along its length or at either the plug or connector end.

■ Turn the mode control to *OFF* and unplug your air conditioner before making any repairs or cleaning.

NOTE: We strongly recommend that any servicing be performed by a qualified individual.

■ For your safety...do not store or use combustible materials, gasoline or other flammable vapors or liquids in the vicinity of this or any other appliance.

E

HOW TO CONNECT ELECTRICITY

Do not, under any circumstances, cut or remove the third (ground) prong from the power cord. For personal safety, this appliance must be properly grounded.

The power cord of this appliance is equipped with a 3-prong (grounding) plug which mates with a standard 3-prong (grounding) wall outlet to minimize the possibility of electric shock hazard from this appliance.

Have the wall outlet and circuit checked by a qualified electrician to make sure the outlet is properly grounded.

Where a 2-prong wall outlet is encountered, it is your personal responsibility and obligation to have it replaced with a properly grounded 3-prong wall outlet. The air conditioner should always be plugged into its own individual electrical outlet which has a voltage rating that matches the rating plate.

This provides the best performance and also prevents overloading house wiring circuits which could cause a fire hazard from overheated wires.

See the Installation Instructions, *Electrical Requirements* section for specific electrical connection requirements.

DO NOT use an extension cord with any of the 230/208 volt models.

Read and follow this Safety Information carefully. SAVE THESE INSTRUCTIONS Troubleshooting Tips

About the controls on the air conditioner.

Features and appearance may vary.

Controls

Mode Control

HIGH COOL and *LOW COOL* provide cooling with different fan speeds.

HIGH HEAT and *LOW HEAT* provide heating with different fan speeds.

FAN ONLY provides air circulation and filtering without cooling or heating.

NOTE: If you move the mode control from a cool setting to **OFF** or to a fan setting, wait at least 3 minutes before switching back to a cool setting.

Cooling Descriptions

For Normal Cooling—Select *HIGH* or *LOW COOL* with the temp control at *5*.

For Maximum Cooling—Select HIGH COOL with the temp control at 10.

For Quieter & Nighttime Cooling—Select *LOW COOL* with the temp control at *5*.

Heating Descriptions

For Normal Heating—Select *HIGH* or *LOW HEAT* with the temp control at *5*.

For Maximum Heating—Select *HIGH HEAT* with the temp control at *1*.

For Quieter & Nighttime Heating—Select *LOW HEAT* with the temp control at *5*.

Temp Control

The temp control is used to maintain the room temperature. The compressor will cycle on and off to keep the room at the same level of comfort.

In the Cooling mode, the higher number selected, the cooler the indoor room will become.

In the Heating mode, the lower the number selected, the warmer the indoor room will become.

Additional controls and important information.

Vent Control

When set at *CLOSE*, only the air inside the room will be circulated and conditioned. When set at *OPEN*, some inside air is exhausted outside.

Air Direction

Two levers on each side of the grille let you control the air direction left or right.

Fingertip pressure on the tabs adjusts the air direction up or straight ahead.

Do not adjust the louvers down any lower than straight out. Air that is blown down will affect the thermostat, causing the air conditioner to turn off before the room is cooled.

Operating Instructions

Installation Instructions

Read these instructions completely and carefully.

Before You Begin

NOTE TO INSTALLER: Leave these instructions with the air conditioner after installation is completed.

NOTE TO CONSUMER: Keep this Owner's Manual and Installation Instructions for future use.

IMPORTANT NOTES:

For personal safety, this air conditioner must be properly grounded.

It is important to have the wall outlet and circuit checked by a qualified electrician if there is any doubt as to whether a proper ground exists.

Follow National Electric Codes (NEC) and/or local codes and ordinances.

CAUTION:

Do not, under any circumstances, cut or remove the third (ground) prong from the power cord.

Do not change the plug on the power cord of this air conditioner.

Aluminum house wiring may present special problems—consult a qualified electrician.

Electrical Requirements

These models require 230/208-volt a.c., protected with a time delay fuse or circuit breaker. These models should be installed on their own single branch circuit for best performance and to prevent overloading house or apartment wiring circuits, which could cause a possible fire hazard from overheating wires.

Window Requirements

- These instructions are for a standard doublehung window. You will need to modify them for other types of windows.
- The air conditioner can be installed without the filler panels if needed to fit in a narrow window. See the window opening dimensions to the right.
- All supporting parts must be secured to firm wood, masonry or metal.
- The electrical outlet must be within reach of the power cord.

Window opening dimensions are for a standard double-hung window.

Storm Window Requirements

A storm window frame will not allow the air conditioner to tilt towards the outside and will keep it from draining properly. To adjust for this, attach a piece of wood to the stool.

WOOD PIECES—

WIDTH: 2"

LENGTH: Long enough to fit inside the window frame.

THICKNESS: To determine the thickness, place a piece of wood on the stool to make it 1/2'' higher than the top of the storm window frame.

Attach securely with nails or screws provided by the installer.

Assemble and Attach the Sill and Support Brackets

A Loosely attach the sill brackets to the support brackets with 5/8" long carriage bolts and nuts.

- **B** Find the track hole that aligns with the sill bracket on the outer edge of the window sill. Using the 5/8" long machine screws and nuts attach the support brackets to the case track hole on each side.
 - Track hole

- **C** Attach both sill brackets to the window sill using two 1" long screws on each side.
- \square Tighten the bolts and nuts on both sides.

NOTE: When finished, use a level to make sure the case tilts to the outside 1/4" minimum. This prevents water from entering the room.

6

Measure and Cut the Window Filler Panels

A Measure the distance "X" between the face of the window molding and the side of the case. Measure both sides of the case separately.

B Subtract 3/16" (one groove) from "X" to determine the required width you need to cut the filler panels.

C Using a sharp knife, mark the groove until the filler panel becomes weak enough to break apart.

Make sure the unit is **OFF** before inserting С cord plug into the outlet.

Check all seals and plug any remaining air gaps D with a suitable weatherproof caulk.

Customer Service

The case may be installed through-the-wall in both existing and new construction.

Read completely, then follow step-by-step.

IMPORTANT:

- Any side louvers must project on the outdoor side of the wall.
- The room side of the case must project into the room at least 1¹/₂" from the finished wall.
- The case must be installed level from side-to-side and with a 1/4" tilt from front to rear.
- A Remove the air conditioner from the case. For specific instructions, refer to the *Window Installation Instructions.*
- **B** Make certain a wall receptacle is available close to the hole location or make arrangements to install a receptacle.
- C Determine the size of wall opening by adding 1/8" to the height and width of the case. Measure height from the top of the case to the bottom of the rail.
- D Place the case in the wall opening and secure the bottom rail, case sides and top with 12 1" long #10 wood screws.

NOTE: Drill pilot holes, if necessary, for proper installation. If the frame is oversized, use shims to prevent case distortion.

Finish the Wall Opening

Caulk all four sides on the outdoor side of the case to prevent moisture from getting through to the interior wall. Use of flashing (drip rail) will further prevent water from dripping inside the wall and down the outside of the building.

Before you call for service...

Troubleshooting Tips

Save time and money! Review the chart below first and you may not need to call for service.

Problem	Possible Causes	What To Do
Air conditioner does not start	The air conditioner is unplugged.	• Make sure the air conditioner plug is pushed completely into the outlet.
	The fuse is blown/circuit breaker is tripped.	• Check the house fuse/circuit breaker box and replace the fuse or reset the breaker.
	Power failure.	• If power failure occurs, turn the mode control to OFF When power is restored, wait 3 minutes to restart the air conditioner to prevent tripping of the compresso overload.
Air conditioner does not cool as it should	Airflow is restricted.	• Make sure there are no curtains, blinds or furniture blocking the front of the air conditioner.
	The temp control may not be set high enough.	• Turn the knob to a higher number. The highest setting provides maximum cooling.
	The air filter is dirty.	• Clean the filter at least every 30 days. See the <i>Operating Instructions</i> section.
	The room may have been hot.	• When the air conditioner is first turned on you need to allow time for the room to cool down.
	Cold air is escaping.	• Check for open furnace floor registers and cold air returns.
		• Set the air conditioner's vent to the closed position.
	Cooling coils have iced up.	• See freezing up below.
Air conditioner freezing up	Ice blocks the air flow and stops the air conditioner from cooling the room.	• Set the mode control at <i>HIGH FAN</i> or <i>HIGH COOL</i> with the temp at 1 or 2 .

Normal Operating Sounds

- You may hear a pinging noise caused by water being picked up and thrown against the condenser on rainy days or when the humidity is high. This design feature helps remove moisture and improve efficiency.
- You may hear the thermostat click when the compressor cycles on and off.
- Water will collect in the base pan during high humidity or on rainy days. The water may overflow and drip from the outdoor side of the unit.
- The fan may run even when the compressor is not.
