

Programming your TV to Receive and Display Channels: All you need is your Remote Control.

1 Attaching the Base

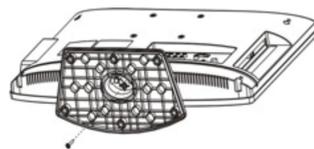

STEP 1.1

Important: The Base of the HDTV must be assembled prior to usage.

- Place the VW22L face down on a soft and flat surface (blanket, foam, cloth, etc.) to prevent any damage to the HDTV.
- Carefully align and insert the Base to the stand (please refer to the illustration to the right).
- Gently push the Base towards the HDTV until the locking mechanism locks into place.

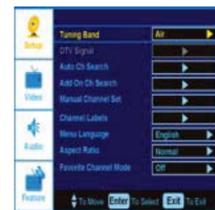

- Insert the provided M4-16mm screw to the bottom of the base (as shown on the illustration to the left).
- Use a Phillips screwdriver to tighten the Base to the stand.

2 Receiving Channels through DTV/TV Input using Regular Antenna or Regular Cable Service (No Box) Signals.

STEP 2.1

- Connect your signal source (cable from antenna or cable from the wall for Cable Service without box) directly to the DTV/TV RF (commonly named COAXIAL) connector.

STEP 2.2

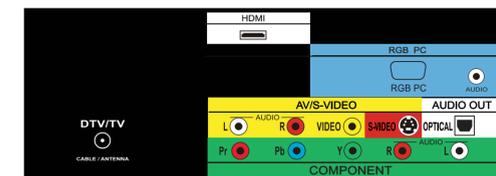

- Turn on the TV; press the **MENU** key to obtain the above display. By default the TV will show over the air (OTA) signal, press **OK** button to highlight Tuning Band. Press **OK** again if the signal is cable service. Press the **Auto** button to select Auto Search, for either OTA or Cable Service the following display will show up.
- Please wait for the TV to complete this process or press the **EXIT** key to cancel the scanning process.
- After completing the scanning, the display will show the first found channel.

3 Displaying Channels from different Signal Sources (External TV Tuner, VCR, Cable Box or Satellite Receiver) through different Inputs.

STEP 3.1

- Select the correct input connection; RF (DTV/TV)* connector, Composite (Yellow, Red and White)* connectors, Component (Red, Green, Blue plus Red and White)* connectors, HDMI* connectors or S-Video (AV)* plus Red and White connectors (if applicable). Make the physical connection or hook up.

STEP 3.2

- Turn on the TV set
- Select the input by pressing the button corresponding to that specific type of connection on the remote control.
- If you have an HD service you must use the HDMI (best) or Component connection.

NOTE: Composite and S-VIDEO Cables can only be used for SD (480i) pictures.

- Turn on your Cable Box, VCR, External TV Tuner or Satellite Receiver and you will see a picture on your TV set. If there is not a picture, make sure you have selected the correct input on the TV set.
- If the selected input is RF connection, you should be aware that the TV set needs to be on either channel 3 or channel 4 matching the channel which has been selected on the back of the VCR, Cable Box, External TV Tuner or Satellite Receiver; please refer to the Owner or User's Manual of such equipment for details.

NOTE: The TV set will be displaying any television station or program selected by the Cable Box, VCR, External Tuner or Satellite Receiver. The TV set will not be able to change programs or channels; this is controlled by the equipment sending the signal. If the service being used is the one which setup includes a box with two different outputs for two different (distant) rooms, then scanning channels would help you to find the signal. Be aware that the channel to be selected varies from provider to provider; meaning that, you may have to call your provider company so they could provide you the specific channel when using high definition made TV sets. Some examples of these channels are: 105, 106, 115 and 116.

*For Your Information:

- Coaxial connection (RF connector) is recognized as the threaded connector, commonly called cable, screw on or coaxial connector which carries the image (picture) and sound (audio) through a single cable.
- Composite connection (RCA connectors) is recognized by the three (yellow, red and white) standardized color coded RCA connectors. Yellow carries the image (picture); red (right channel) and white (left channel) carry the sound (audio) of the signal.
- Component connection (RCA connectors) is recognized by the three (green, blue and red) standardized color coded RCA connectors for image (picture) plus the two (red and white) standardized color coded RCA connectors for the sound (audio) of the signal.
- HDMI (High-Definition Multimedia Interface) connection (HDMI connector) is recognized by the standardized elongated D-Shaped connector which carries both the image (picture) and the sound (audio) of the signal through a single cable.
- S-Video (separate video) connection (4-pin Mini-DIN connector) is recognized by the small connectors at the end of a cable with multiple pins in it. This connection carries only the image (picture) of the signal; therefore, there is a need to supply a separate sound (audio) signal by using the two (red and white) standardized color coded RCA connectors.

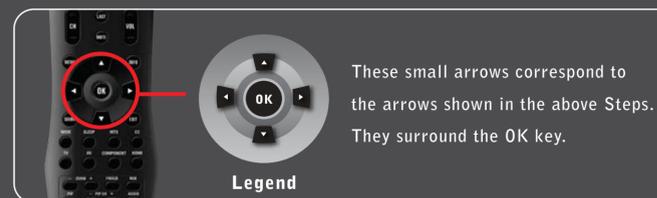

Programming Your Cable or Satellite Box Remote

Consult your Cable or Satellite Owner's Manual to determine if you need a 3, 4 or 5-digit code. If your Cable or Satellite Box requires:

- 3-digits, please use "627" (This code usually works with DISHNetwork.)
- 4-digits, please use "1758", "0178" or "0128"
- 5-digits, please use "11758", "10178" or "10128" (These codes usually work with DIRECTV.)

Your new TV set is now ready

to automatically reproduce the best picture quality from the input signal being fed into it. Enjoy your VIZIO HDTV.

These small arrows correspond to the arrows shown in the above Steps. They surround the OK key.

Optional Components

ENHANCE YOUR VIZIO EXPERIENCE

When it comes to components and accessories, don't settle for less than VIZIO. We offer a full line of products specifically designed to accentuate your VIZIO HDTV. To learn more about how you can enhance your VIZIO experience, call 888-849-4623 or visit www.VIZIO.com.

VIZIO HIGH-DEFINITION CERTIFIED CABLES

Our VIZIO Certified HD cables carry the same standards of excellence as all our VIZIO products. Available in: DVI, HDMI and Component in lengths of 2, 5, and 10 meters.

VIZIO CERTIFIED MOUNTS

FLUSH MOUNT- turn your HDTV into a work of art
TILT MOUNT- adjust your HDTV for the most comfortable viewing position
ARTICULATING ARM- position your HDTV exactly where you want it
