eGUARD Controller

- Compatible with Electronic (ECU) and Standard (MPU) engines
- J1939 Ready – works directly with our MurphyLink J1939 PowerView gages
- Automatic Speed Control - throttles engine speed based on analog inputs
- Engine Diagnostics – provides most common descriptive faults when connected to electronic engines

Description

The eGUARD is a state-of-the-art controller. It will meet virtually all of your engine-driven equipment application requirements. The eGUARD has been designed from the ground up to control today's electronic engines using J1939 and can easily control the traditional non-electronic engines.

The eGUARD can be configured to automatically or manually operate most types of applications, from a simple start/stop sequence to complex automatic throttling. Pumps, Compressors, Chippers, Grinders and Power Units are just a few of the ideal industrial applications for the eGUARD.

The eGUARD controller can maintain constant pressure, flow or level by automatically increasing or decreasing engine speed.
