PAINTING YOUR MIX IN-WALLS

MIX In-Walls are designed to accept all types of interior and exterior paints. Spray or roller application should provide excellent results. A paint shield is included with all Blueprint Series In-Walls to protect the speakers during the painting process.

WARRANTY

MIX Blueprint Series In-Wall Loudspeakers are guaranteed against defects in parts and workmanship for a period of ten (10) years from the date of purchase. Speakers found defective during that period will be repaired by MIX without charge for parts.

This warranty is void if it is determined that unauthorized parties have attempted repairs or alterations of any nature. Before assuming that a defect is present in the loudspeakers, be certain that all associated equipment is operating properly.

If a defect is present, your authorized MIX dealer may be able to effect repairs. If not, you are responsible for providing transportation to the factory. Your MIX dealer can recommend the safest method of transportation. Proof of purchase is required when requesting service, so please retain your sales slip.

Specifications subject to change without notice.

(Cut out on dotted line and mail to address on reverse side.)

15" Powered Subwoofer System

200 Watt Class D Switching Power Amplifier

Infrared Remote Control for Volume Function

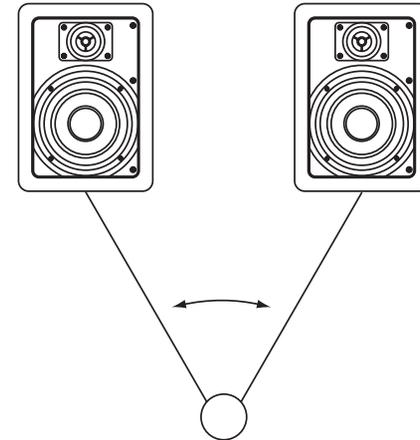

Magnetically Shielded, Downfiring Subwoofer in small enclosure

Signal Sensing Auto Turn On

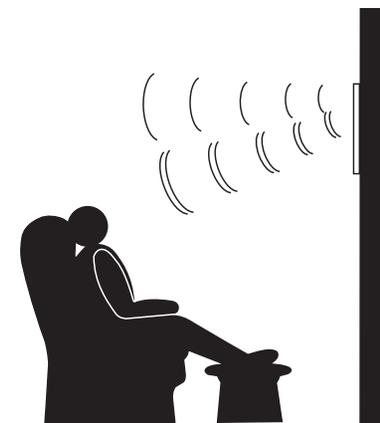

Red LED Clipping Indicator

LOUDSPEAKER PLACEMENT

Blueprint Series Loudspeakers are designed to work within any interior decorating scheme. They can be installed in virtually any location where flush mounting is possible. To maximize their sound performance however certain guidelines should be followed. For the best stereo reproduction the two loudspeakers should be placed an equal distance from your listening position and separated so that the angle between them, at the listening position, is

For best stereo imaging, we recommend that the units be placed so that the tweeters are as close as possible to the ear level of a seated listener. As this is not always possible in keeping with aesthetic design of a particular room, MODEL 520W, 620W, and 820W In-Wall Loudspeakers were designed with a pivoting tweeter which rotates to allow you to "aim" the high frequencies

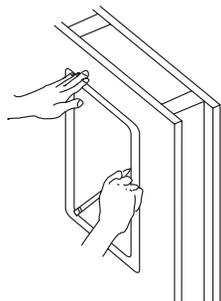

(Normal Dispersion

((Dispersion After Tweeter Adjustment

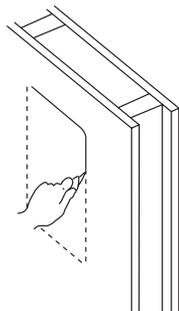

STEP 1

Using a stud finder (available at low cost at most hardware stores) or other accurate method, locate center point between two studs and mark. Using template provided, trace hole pattern on surface of wall. Placing a bubble level on either the horizontal or vertical guidelines of template will assist you in

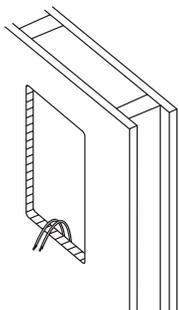

STEP 2

Using a sabre saw, keyhole saw or very sharp utility knife, cut hole in wall,

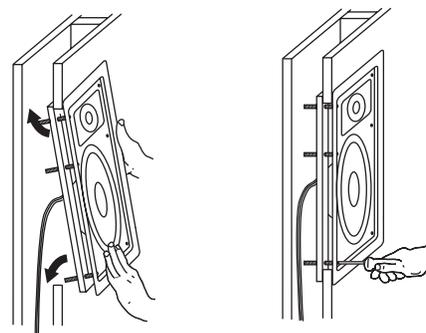

STEP 3

Run loudspeaker wires to sound source location. There are several methods you can use to accomplish wiring, depending on the construction characteristics of the room or house. You can add a professional touch to your installation by using a speaker terminal plate at the source location. Leave sufficient amount

STEP 4

Attach loudspeakers wires to speaker terminals, observing correct polarity (positive to positive and negative to negative), and position panel and frame assembly to hole as shown. Insert top of mounting frame into hole at top. By moving bottom of frame upwards, you should now be able to insert bottom of frame into hole at bottom. Be careful not to pinch loudspeaker wires in the process. Tighten long screws. Use a level during tightening to insure

STEP 5

After speaker panel is secured tightly, test for sound.

STEP 6

When you are satisfied the speaker is operational, "aim" the tweeter, and affix grill. As grill is designed for a snug fit, you'll need to position one edge into slot first, and press or squeeze around perimeter of grill, while pushing leading edges into grill slot.
