1 QUICK SETUP

BUT PLEASE READ THE REST OF THE MANUAL LATER!

1. Insert batteries or connect the included AC adaptor.
2. Set the DX/LOCAL switch to DX (left side of radio).
3. Turn the SSB switch OFF (right side of radio).
4. Fully extend the telescopic antenna.
5. With the radio off, press and release the AM button once.
6. Immediately press and release the STEP button. "10KHz" now appears in the right side of the display, and will disappear in a few seconds. (See page 6 for more information about this procedure.)
7. Turn the radio on by pressing the ON/OFF button.

2 YOUR RADIO AT-A-GLANCE

WHAT'S INCLUDED WITH THE G4000A?

- Owner's Manual
- Warranty card
- A Grundig AC adaptor for use on 110-120 VAC outlets in the Americas
- A 23 foot "reel" antenna for shortwave reception
- Earphones

3 INITIAL SETUP

IMPORTANT! SETUP FOR NORTH AMERICAN USE

If you do not live in the United States or Canada, the radio is set up at the factory for the 9 kilohertz spacing used for your AM (MW) stations. This part of the initial setup can be ignored.

North America's AM stations are exactly 10 kilohertz apart. At the factory, the radio is set up for the 9 kilohertz spacing of stations in Europe. To change this to the 10KHZ spacing:

1. With the radio OFF, press and release the AM button once.
2. Immediately press and release the STEP button. "10 KHZ" now appears in the right side of the display and will disappear in a few seconds.

This change will be permanently in the radio's memory as long as batteries are not taken out for a period of ten minutes or more.

When traveling outside of the Americas, use the same procedure as above to set the spacing back to 9 kilohertz.

ADDITIONAL SETUP INFORMATION

1. On the right side of the radio, set the SSB switch to the OFF position. This feature is described on page 24. **NOTE:** the FINE TUNING control, on the right side of the radio, is only activated and needed when the G4000A is in the SSB mode. You do not need to use this control when listening to regular AM, FM, and shortwave broadcasts.

On the left side of the radio, set the DX/LOCAL switch to the DX position. DX allows for maximum sensitivity, the preferred position.

4 SUPPLYING POWER AND USING EXTERNAL ANTENNAS

HOW TO INSTALL BATTERIES

Install six AA alkaline batteries. Follow the diagram imprinted on the back of the radio near the battery compartment. With the radio face down and the battery compartment toward you:

- The flat ends (-) of the bottom batteries go toward the left.
- The flat ends (-) of the top batteries go toward the right.

AC ADAPTOR USE

The Grundig adaptor supplied with this product is only for use in the Americas, where household AC voltage is 110-120 volts AC. Do not use this adaptor in countries with household AC voltage of 220-240 volts AC.

USING YOUR GRUNDIG AC ADAPTOR

1. Plug the adaptor into a household outlet.
2. Insert plug into the radio's DC 9 V socket.

NOTE: when using the adaptor, it is OK to leave batteries in the radio.

HOW TO USE THE INCLUDED "REEL" ANTENNA AND THE EXTERNAL ANTENNA SOCKET (left side of the radio)

The **SW EXT. ANT.** Socket is for shortwave antennas. Use it with the included "reel" antenna. Always fully unroll the "reel" antenna and place it as high off the floor as possible, next to the windows.

PROFESSIONALLY ENGINEERED ANTENNAS

Professionally engineered, outdoor shortwave antennas, available through specialized retailers, can also be used. Use the **SW. EXT. ANT.** Socket mentioned above. The socket is a 1/8 inch mono socket, used in conjunction with a 1/8 inch mono plug, such as the plugs often used for mono ear-phones. If you would like advice about shortwave antennas, please call Etón technical support at 1-800-872-2228 for U.S. and 1-800-637-1648 for Canada.

5 GENERAL RADIO OPERATION

HOW TO TURN THE RADIO ON AND OFF

Press the **ON/OFF** button.

HOW TO LISTEN TO YOUR LOCAL AM STATIONS

1. On the G4000A, the AM broadcast band is called medium wave. When you are listening to AM, the letters "MW" appear in the display.
2. Press the **ON/OFF** button to turn the radio on.
3. Press the **AM** button several times, until MW appears near the center of the display.
4. If "STEP" appears in the display, press the **STEP** button to choose 10 KHz tuning rate.
5. Automatically tune using the **AUTO TUNING** button. The radio will automatically stop on stations. A quick press-and-release tunes up-frequency; a long press-and-release tunes down-frequency.
6. Manually tune using the **TUNING** button.

HOW TO USE THE WIDE/NARROW SWITCH (left side of radio)

Experiment with this switch and let your ears be your guide. WIDE gives the best audio fidelity; NARROW best minimizes interference from other nearby stations. This switch is used for AM, shortwave, and longwave listening.

HOW TO LISTEN TO YOUR LOCAL FM STATIONS

1. Press the **FM** button.
2. Automatically tune using the **AUTO TUNING** button. The radio will automatically stop on stations. A quick press-and-release tunes up-frequency; a long press-and-release tunes down-frequency.
3. Manually tune using the **TUNING** buttons.

GENERAL RADIO OPERATION continued

HOW TO USE THE STEREO/MONO SWITCH (left side of the radio)

For true stereo reproduction in FM, select **STEREO** when you use earphones or headphones. When STEREO is selected, and the broadcast is in stereo, two circles appear above and to the right of the frequency in the display. Use the **MONO** position whenever reception is poor or marginal.

HOW TO USE THE TONE SWITCH

Experiment and let your ears judge which position, HIGH or LOW, you like best.

DIRECT FREQUENCY ENTRY

If you know the exact frequency of the station you want to hear, directly enter it using the keypad and immediately press the **FREQU./METER** button. Pressing the FREQU./METER button finalizes the entry. Be sure to include the decimal point in FM frequencies. Any kind of frequency may be entered regardless of what kind of frequency you are presently tuned to, e.g. you can enter an FM frequency even if you are presently in shortwave.

AM STATION EXAMPLE: to tune the frequency 810 kilohertz in the AM band, press 8 1 0 , then press the FREQU./METER button.

FM STATION EXAMPLE: to tune the frequency 105.7 megahertz in the FM band, press 1 0 5 . 7, then press the FREQU./METER button. Be sure to include the decimal point in FM frequencies.

SHORTWAVE STATION EXAMPLE: to tune the frequency 5975 kilohertz in the shortwave 49 meter band, press 5975 then the FREQU./METER button.

GENERAL RADIO OPERATION *continued*

HOW TO USE THE STEP BUTTON

In AM (MW), SW, and LW (see below), the STEP button provides selection of the best tuning steps, in kilohertz. This button is not functional in FM. The tuning step rate is indicated in the lower right of the display, e.g. "STEP 5". Use these guidelines:

- **AM (MW):** 10 KHz in the Americas; 9 KHz outside of the Americas
- **LW (longwave):** 9 KHz for broadcast stations. Note: You will probably not hear any stations in the Americas, as LW is not used for broadcast stations. It is used in Europe and other parts of the world for broadcasts to those areas.
- **SSB:** 1KHz

HOW TO USE THE LOCK BUTTON

When lock is on, the word LOCK appears in the upper right area of the display. Using this feature has no effect on alarm functions.

When the radio is on: Pressing the **LOCK** button locks all keys except the **ON/OFF** button and the **SNOOZE** button.

When the radio is off: Pressing the **LOCK** button locks all keys. This will keep the radio from accidentally turning on when packed in a briefcase, etc. When you want to listen to your radio, press **LOCK** and then the **ON/OFF** switch.

HOW TO USE THE AM BUTTON'S LAST STATION MEMORY FEATURE

Pressing the AM button over and over steps through the last station tuned in MW, SW and LW.

HOW TO USE THE VOLUME CONTROL KNOB

Use this to control the loudness of the radio.

HOW AND WHEN TO USE THE RESET FEATURE

If the radio operates erratically, gently poke an opened paper clip into the RESET hole on the front of the radio. Normal operation may be restored. Note that this procedure erases all memories and resets the clock

6 SHORTWAVE RADIO OPERATION

HOW TO LISTEN TO SHORTWAVE STATIONS

If you already know the specific frequency of a shortwave station, enter it, using the direct frequency entry technique described earlier. For a complete list of shortwave frequencies, use the major shortwave publications mentioned on page 23.

Even if you do not know any specific frequencies of shortwave stations, you can find them by going into a shortwave band and tuning around, as described below.

WHAT IS A SHORTWAVE BAND

If you have ever listened to AM or FM radio, then you already know what a band is. The AM band is 530-1600 KHz; the FM band is 88-108 MHz. A band is simply a frequency range where stations are located. When you look for stations in these "bands", you simply tune around until you find a station you like. Shortwave is similar, and the shortwave bands have names like 25 meters, 31 meters, 49 meters, etc. These are abbreviated 25m, 31m and 49m. Just like in AM and FM radio, one simply gets into the shortwave band and tunes around, looking for stations.

For example, the 19 meter shortwave band encompasses the frequency range of 15100 to 15600 kilohertz. The band chart on the back of the G4000A shows the frequency range for each band.

HOW TO ENTER A SHORTWAVE BAND

EXAMPLE: To enter the 25 meter band:

1. Press 2 5
2. Press the **FREQ./METER** button.

HOW TO TUNE AROUND IN A SHORTWAVE BAND

AUTO TUNING: The radio will find stations for you within the shortwave band you have entered. In shortwave, this feature only works within the shortwave bands shown on the back of the radio (see the chart titled "SHORTWAVE BAND AUTO TUNING RANGES").

SHORTWAVE RADIO OPERATION *continued*

MANUAL TUNING: Use the regular TUNING buttons to go up or down frequency. Be aware that when using manual tuning, it is possible to tune right out of the shortwave band you have entered. You are in the band as long as the band's number, e.g. 25m, is in the display.

HOW TO CHOOSE THE BEST SHORTWAVE BAND TO TUNE AROUND IN

This information and much more can be found in the section titled MORE INFORMATION ABOUT SHORTWAVE.

SHORTWAVE BAND AUTO TUNING RANGES:

90m: 3200-3400 KHz	22m: 13600-13800 KHz
80m: 3500-3800 KHz	20m: 14000-14350 KHz
75m: 3900-4000 KHz	19m: 15100-15600 KHz
60m: 4750-5060 KHz	17m: 18065-18170 KHz
49m: 5950-6200 KHz	16m: 17550-17900 KHz
41m: 7100-7300 KHz	15m: 21000-21449 KHz
40m: 7000-7099 KHz	13m: 21450-21850 KHz
31m: 9500-9900 KHz	12m: 24890-24990 KHz
30m: 10100-10150 KHz	11m: 25650-26100 KHz
25m: 11650-12050 KHz	10m: 28000-29700 KHz

7 STORING STATIONS INTO MEMORY

To store a station into memory, you must be tuned to that station. Then you must decide which of the 40 memories to store it into. Follow the easy steps outlined below.

HOW TO TELL WHICH MEMORIES ARE EMPTY

- To determine the next available memory, press the **FREE** button once. The memory number is shown in the lower right hand corner of the display.
- To see all available memories, press the **FREE** button repeatedly. The empty memory numbers are shown in the lower right corner of the display.

HOW TO STORE A FREQUENCY INTO MEMORY

There are 40 memories. Here is a specific example. To store BBC's evening frequency to North America, 5975 kilohertz, into memory 32, do the following:

- Press 5975
- Immediately press the **FREQU./METER** button
- Press 3 2

- Immediately press the **STORE** button. If the display flashes, it means that a frequency is already stored into this memory. To overwrite it, immediately press **STORE** again. If you do not want to overwrite it, start over and use a different memory.

HOW TO ACCESS WHAT YOU HAVE STORED INTO MEMORY

- To access one specific memory, e.g. memory 25, press 2 5 then press either **MEMO** button
- To review all filled memories, press either **MEMO** button repeatedly.
- To scan filled memories, press either **MEMO** button for about one second, and then release it. Scan starts. To stop scan, press any button.

HOW TO ERASE THE CONTENTS OF A MEMORY

Enter the memory's number e.g. 2 5 , then press **FREE** twice.

8 USING THE CLOCK, ALARM AND SLEEP TIMER FEATURES

HOW TO SET THE CLOCK

This can be done with the radio on or off. The G4000A's clock is a 24 hour clock only, e.g. 6 o'clock in the morning will read as 6:00; 6 o'clock in the evening will read as 18:00. There are two clocks, TIME I and TIME II. Select one or the other by pressing the **TIME 1/2** button. TIME I or TIME II shows in the display at top center. Set the time using the examples below.

EXAMPLE 1: If it is 06:00 hours press 6 . 0 0, then immediately press the TIME 1/2 button.

EXAMPLE 2: If it is 15:32 hours press 1 5 . 3 2, then immediately press the TIME 1/2 button.

HOW TO SET THE ALARM CLOCK

The alarm time is shown in the upper left corner of the display, under "ON TIME," when the radio is off.

To set the alarm to activate at 6:30:

1. Press 6 . 3 0 (be sure to include the decimal point)
2. Immediately press and release the **ON TIME** button.
3. Select the alarm mode using the **AUTO** button.

HOW TO CONTROL THE ALARM CLOCK

- Press the **AUTO** button several times while looking at the upper left corner of the display.
- The "musical note" symbol wakes you to the radio playing the last station it was set to.
- The "bell" symbol wakes you to a beeper sound.
- When both symbols disappear and -:— appears, THE ALARM IS DEACTIVATED.

HOW TO USE THE ALARM CLOCK'S SNOOZE FEATURE (button on top of radio)

Once the alarm has activated, you can get 5 minutes more sleep by briefly pressing the **SNOOZE** button. You can repeat this as many times as you like. By pressing the **SNOOZE** button for more than 2 seconds, you can completely shut off the alarm.

USING THE CLOCK, ALARM AND SLEEP TIMER FEATURES

continued

HOW TO SET THE SLEEP TIMER

Press the **SLEEP** button over and over. Each press changes the amount of time the radio will play before shutting off automatically, 60 through 0 minutes.

HOW TO USE THE DIAL LIGHT (button on top of radio)

The **LIGHT** button causes the display to be illuminated. After 10 seconds, or when the **LIGHT** button is pressed again, the light will go out.

9 MORE INFORMATION ABOUT SHORTWAVE

Listed below are the characteristics of the major shortwave bands. Follow these guidelines for best listening results. Because shortwave signals depend on such factors as the sun, the ionosphere and the earth itself, signals cannot be heard on all bands throughout the day. Some bands are best during the daylight hours, and some are best at night. If the term "band" is new to you, please read the section titled, "WHAT IS A SHORTWAVE BAND?" on page 11.

DAYBANDS	CHARACTERISTICS
13m	Results vary. Worth trying.
16m	Similar to 19m.
19m	The best daytime band.
22m	Similar to 19m (fewer stations).
25m	Best around sunrise/sunset.
31m	Similar to 25m.

DAYTIME LISTENING

Shortwave listening is generally at its poorest during the daylight hours of about 10 a.m. to 3 p.m. The major reason for this is that the broadcasters are not transmitting to North America at this time. They assume that we are all either at work or at school, and are not able to listen during the day. If you want to try daytime listening, use the guidelines below. You will have some success, but not nearly as good as during the late afternoon and evenings. The best bands are **BOLD**.

MORE INFORMATION ABOUT SHORTWAVE continued

EVENING LISTENING

This is the best time to listen, because the broadcasters are deliberately transmitting to North

America. These bands may be extremely good around sunset and sunrise too. Best bands are **BOLD**.

NIGHT BANDS	CHARACTERISTICS
19m	Summer months.
22m	Summer months.
25m	Best 2 hours before/after sunrise/sunset
31m	Good all night everywhere
41m	Good all night in Eastern North America; varies in Western North America
49m	The best night band everywhere.
NOTE: Getting close to a window may substantially improve your reception.	

MORE INFORMATION ABOUT SHORTWAVE continued

The construction materials of some buildings simply do not let signals in very well. Signals penetrate wood frame buildings easiest, while concrete and brick buildings usually block signals. If you are in a building with one or more stories above you, signals can also be impaired in strength. In such a situation, position yourself, and especially the radio's antenna, as close to a window as possible while listening.

Below is a list of the shortwave bands used for international broadcasts and their corresponding frequencies. Since some radios show frequency in megahertz and some in kilohertz, both are shown here. The G4000A shows shortwave frequencies in kilohertz.

BAND	MEGAHERTZ (MHz)	KILOHERTZ (KHz)
11m	25.67-26.10 MHz	25670-26100 KHz
13m	21.45-21.50 MHz	21450-21850 KHz
16m	17.55-17.90 MHz	17550-17900 KHz
19m	15.10-15.60 MHz	15100-15600 KHz
22m	13.60-13.80 MHz	13600-13800 KHz
25m	11.65-12.05 MHz	11650-12050 KHz
31m	9.500-9.900 MHz	9500-9900 KHz
41m	7.100-7.300 MHz	7100-7300 KHz
49m	5.950-6.200 MHz	5950-6200 KHz
60m	4.750-5.060 MHz	4750-5060 KHz
75m	3.900-4.000 MHz	3900-4000 KHz
90m	3.200-3.400 MHz	3200-3400 KHz
120m	2.300-2.490 MHz	2300-2490 KHz

MORE INFORMATION ABOUT SHORTWAVE continued

WHAT IS HEARD ON SHORTWAVE RADIO?

- International foreign broadcasts, many targeting North America
- Long distance two-way amateur radio, maritime, and aeronautical communications

WHAT COUNTRIES ARE HEARD ON SHORTWAVE RADIO?

The next chart shows some of the countries targeting North America with their broadcasts. Unless otherwise noted, frequencies are for evening listening in North America. Other countries do not deliberately target North America, but can be heard anyway. Whether or not a country can be heard depends on many factors, including signal strength, your geographic location, and the condition of the earth's ionosphere.

Frequencies in **BOLD** are mainly used for the country's native language broadcast.

COUNTRY	BROADCAST
Australia (Radio Australia)	9580, 9860, 15365, 17795
Austria (Radio Austria International)	6015, 9655
Canada (Radio Canada International)	5960, 6120, 9755
China (China Radio International)	9690, 9780, 11680, 11715, 11840
Cuba (Radio Habana)	6060, 6080, 6180, 9510, 9820
Ecuador (HCJB-voice of the Andes)	9745, 11925, 12005, 15140
France (Radio France International)	5920, 5945, 9790, 9800
Germany (Deutsche Welle)	5960, 6040, 6045, 6075 , 6085, 6100 , 6120, 6145, 6185, 9515, 9565, 9535, 9640, 9545 , 9650, 9670, 9700, 9730, 9735, 11705, 11740, 11750, 11810 , 11865, 13780 , 15275 , 15410 , 17810 , 17860
Holland (Radio Nederland)	6020, 6025, 6165, 9590, 9715, 9840, 9895, 11655
Japan (Radio Japan/NHK)	5960, 6025, 9610, 9680, 9725, 11885, 11895, 15230
Russia (Radio Moscow International)	7105, 7115, 7150, 7270, 9750, 9765, 11805, 11840, 12050, 15410, 15425
Taiwan (Voice of Free China)	5950, 9680, 11740, 11855, 15440
United Kingdom (BBC World Service)	Morning: 5965, 6195, 9515, 9740, 11750, 17840 Evening: 5975, 6175, 7325, 9590, 9640, 15260

MORE INFORMATION ABOUT SHORTWAVE *continued*

For fully comprehensive listings of the broadcast schedules of all countries, see the broadcast guides recommended in the section titled SHORTWAVE GUIDES AND MAGAZINES on page 23.

IS THERE ENGLISH LANGUAGE PROGRAMMING?

Yes! Many major international broadcasters incorporate English programming.

WHAT IS THE PROGRAM CONTENT LIKE?

This can vary considerably from country to country; however, programming usually consists of world news, local news from the country of origin, news commentary, interview programs, culturally oriented programs, music oriented programs, and even political propaganda.

ARE THE SIGNALS CLEAR?

Often, but not always. Today's technology has greatly minimized the fading, static and interference that are natural aspects of international broadcast listening.

CAN I HEAR A SPECIFIC COUNTRY?

Yes, if that country is transmitting its signal specifically for listening in your part of the world. Otherwise, it may range from good to impossible.

IF A COUNTRY IS NOT TRANSMITTING ITS SIGNAL SPECIFICALLY FOR RECEPTION IN NORTH AMERICA, IS THERE ANY CHANCE OF RECEIVING IT?

Yes, with detailed research into broadcast time and frequency and patience, it is possible but never guaranteed. A professionally engineered outdoor antenna can make a major difference. Call Grundig technical support for advice on such antennas.

MORE INFORMATION ABOUT SHORTWAVE *continued*

WHAT ELSE CAN AND CANNOT BE HEARD ON SHORTWAVE?

You can hear long distance two-way marine, aviation, and amateur radio (ham). To receive such communications, an advanced shortwave receiver with single sideband (SSB) capability must be used. The more advanced Grundig radios can do this. Local VHF/UHF air traffic, police, fire, ambulance, and weather services CANNOT be heard. For these, use a VHF/UHF scanner.

CAN DISTANT AM/FM BROADCAST STATIONS BE RECEIVED?

FM is strictly for local stations. Daytime AM stations usually have a maximum distance of 50-100 miles. At night, AM broadcast signals can sometimes be heard over much greater distances, hundreds of miles away.

HOW IS IT THAT BROADCASTS FROM AROUND THE WORLD CAN BE HEARD ON A SHORT-WAVE RADIO?

Shortwave radio can be heard around the world because of the earth's ionosphere. Think of the ionosphere as a cloud-like layer enshrouding the earth at an altitude of 140-250 kilometers (90-160 miles). It consists of electrons and ions, the density of which are governed by the sun and the earth's geomagnetic forces. Radio waves virtually bounce their way around the earth, bouncing off the ionosphere, back down to earth, often repeating this process several times. The low angles at which this takes place enable the radio waves to travel great distances with each bounce. This whole process is called radio wave deflection and ionospheric propagation.

MORE INFORMATION ABOUT SHORTWAVE *continued*

HOW CAN I DETERMINE IF AN OUTDOOR ANTENNA WILL HELP?

While inside your normal listening environment, tune in a relatively weak shortwave signal. Staying tuned to this signal, step outside and away from your building. If the signal strength increases significantly, an outdoor antenna will help considerably. If there is little or no improvement in signal strength, an outdoor antenna will help; however, the amount of improvement will depend on the type of antenna used. If you have questions about outdoor antennas, call Grundig technical support.

WHAT TIME STANDARD IS USED IN SHORTWAVE BROADCAST SCHEDULES?

Since there are many different time zones around the world, it would be impractical for shortwave broadcasters to give broadcast times for each separate time zone. To simplify matters, they list their broadcast schedules in Coordinated Universal time (UTC), also known as Greenwich Mean Time (GMT), World Time and Zulu Time.

Just what is UTC? It is the time in Greenwich England with no correction for daylight savings time, and is always stated in 24 hour format. In North America, UTC is ahead of our local time, 5 hours EST, 6 hours CST, 7 hours MST, 8 hours PST; one hour less during the months of daylight savings time. So, if a broadcast starts at 20:00 hours UTC, this correlates to 15:00 hours (or 3PM) Eastern Standard Time, and 12:00 hours (Noon) Pacific Standard Time.

To determine Coordinated Universal Time, tune-in to a major station, such as BBC London, on the hour. If your shortwave radio tunes to the following frequencies, UTC can be heard each minute on station WWV in Fort Collins Colorado: 20000 KHz, 15000 KHz, 10000 KHz, 5000 KHz and 2500 KHz. Usually, during any time of the day, one or more of these frequencies can be received in North America. UTC can also be heard on the Canadian station CHU, at 3330 KHz, 7335 KHz, and 14670 KHz.

10 GETTING STARTED WITH SINGLE SIDEBAND (SSB); MARITIME & AERONAUTICAL WEATHER AND COMMUNICATION FREQUENCIES; HAM RADIO COMMUNICATION FREQUENCIES; TIME SIGNALS

High end shortwave radios, such as the Grundig G4000A, have a feature called SSB, a highly efficient way of electronically processing transmitted and received signals for two-way communication. Examples of this are amateur radio (hams), maritime, and aeronautical communication. Either upper side band (USB) or lower side band (LSB) can be used.

Receiving SSB signals is not always easy. Since this is two-way communication, transmissions are often very short and sporadic. Also, most two-way communication uses relatively low power, 50 to 1000 watts. The amateur radio operators are easiest to find; the others can be very difficult. Signals are also affected by the eleven year sunspot cycle. Signals will be poor through 1996 then the signals will get continually better until peaking in 2002 when reception will be excellent. Overall, very good reception can be expected from about 1998-2005.

Finding SSB signals can be like seeking a "needle in a haystack", so be patient! The easiest place to find SSB communication is at night in the amateur band shown below at 3700-4000 KHz.

HOW TO TURN THE SSB FEATURE ON

1. Slide the **SSB** switch (right side of radio) to the ON position.
2. Use the **STEP** button to select 1 KHz tuning steps. "STEP 1" will display in the lower right of the display.
3. Put the **FINE TUNING** control knob (right side of the radio) in its center position.
4. Use the **FINE TUNING** control knob to fine tune signals.

GETTING STARTED WITH SINGLE SIDEBAND (SSB); MARITIME & AERONAUTICAL WEATHER AND COMMUNICATION FREQUENCIES; HAM RADIO COMMUNICATION FREQUENCIES; TIME SIGNALS

continued

Below are some selected frequency ranges on which SSB communication can be found. All frequencies are shown in Kilohertz.

AMATEUR RADIO	AERONAUTICAL (usually USB)	MARITIME (usually USB)
3700-4000, LSB, night.	2850-3155	4063-4438
7150-7300, LSB, night.	3400-3500	6200-6525
14150-14350, USB, day.	4650-4750	8195-8815
21150-21450, USB, day.	5480-5730	12230-13200
	6525-6765	16360-17410
	8815-9040	18780-18900
	10005-10100	19680-19800
	11175-11400	22000-22720
	13200-13360	25070-25110
	15010-15100	
	17900-18030	
	21870-22000	
	23200-23350

GETTING MORE INFORMATION ABOUT SSB COMMUNICATION

Please contact Etón by phone. We will guide you to resources such as companies with excellent catalogs full of shortwave accessories, including books on SSB communication. Among the accessories are a variety of professionally engineered shortwave antennas which will significantly improve signal strengths and reception.

MONTHLY MAGAZINES WITH SSB RELATED INFORMATION AND ARTICLE

These magazines are available from bookstores and magazine displays.

11 TECHNICAL INFORMATION

BATTERY REQUIREMENTS

Six AA batteries (alkaline for best results)

AC ADAPTOR

Output of 9 volts DC, negative polarity (tip negative); 300 millampere current capability; coaxial plug outer diameter of 5.5 millimeter, inner diameter of 2.1 millimeter. **NOTE:** Using a plug tip diameter smaller than 5.5 millimeter may not cut off voltage to the battery compartment and can cause batteries to overheat, leak and destroy circuits. This will void the warranty.

EARPHONE/HEADSET SOCKET

Standard earphones/headphones with stereo plug, 3.5 millimeters or 1/8 inch.

EXTERNAL ANTENNA SOCKET

3.5 millimeter or 1/8 mono plug.

TUNING STEPS

AM (MW): 1 KHz / 9 KHz / 10 KHz
FM: 50 KHz
SW: 1 KHz / 5 KHz
LW: 1 KHz / 9 KHz

INTERMEDIATE FREQUENCIES

FM: 10.7 MHz
AM (MW), SW, LW: 55.85 MHz, 455 KHz

AUDIO OUTPUT POWER

600 milliwatts.

FREQUENCY RANGES

AM (MW): 520-1710 KHz @ 10 KHz steps;
527-1606 KHz @ 9 KHz STEPS
FM: 87.5-108 MHz
LW: 144-351 KHz
SW: 1600-30000 KHz (1.6-30 MHz)

12 INDEX TO THE RADIO'S CONTROLS

13 SERVICE INFORMATION

You may contact the Etón Service Department for additional information:

customersvc@etonncorp.com

Contact us for a Return Authorization prior to shipping your unit. Should you want to return your unit for service, pack the receiver carefully using the original carton or other suitable container. Write your return address clearly on the shipping carton and on an enclosed cover letter describing the service required, symptoms or problems. Also, include your daytime telephone number and a copy of your proof of purchase. The receiver will be serviced under the terms of the Etón Limited Warranty and returned to you.

14 ONE YEAR LIMITED WARRANTY

Etón warrants to the original purchaser this product shall be free from defects in material or workmanship for one year from the date of original purchase. During the warranty period Etón or an authorized Etón service facility will provide, free of charge, both parts and labor necessary to correct defects in material and workmanship. At their option, Etón may replace a defective unit.

1. Complete and send in the Warranty Registration Card within ten (10) days of purchase.

2. Call Etón or the nearest authorized service facility, as soon as possible after discovery of a possible defect.

Have ready:

- (a) the model and serial number.
- (b) the identity of the seller and the approximate date of purchase.
- (c) a detailed description of the problem, including details on the electrical connection to associated equipment and the list of such equipment.

3. Etón will issue a Return Authorization number and the address to which the unit can be shipped. Ship the unit in its original container or equivalent, fully insured and shipping charges prepaid.

Correct maintenance, repair, and use are important to obtain proper performance from this product. Therefore carefully read the Instruction Manual. This warranty does not apply to any defect that Etón determines is due to:

- 1. Improper maintenance or repair, including the installation of parts or accessories that do not conform to the quality and specification of the original parts.
- 2. Misuse, abuse, neglect or improper installation.
- 3. Accidental or intentional damage.
- 4. Battery leakage.

All implied warranties, if any, including warranties of merchantability and fitness for a particular purpose, terminate one (1) year from the date of the original purchase.

ONE YEAR LIMITED WARRANTY continued

The foregoing constitutes Etón entire obligation with respect to this product, and the original purchaser shall have no other remedy and no claim for incidental or consequential damages, losses, or expenses. Some states do not allow limitations on how long an implied warranty lasts or do not allow the exclusions or limitation of incidental or consequential damages, so the above limitation and exclusion may not apply to you. This warranty give you specific legal rights and you may also have other rights which vary from state to state.
