Section 1: Introduction

This manual is designed to explain the operation of the All Sport® 5000 Series console. For questions regarding the safety, installation, operation or service of this system, please refer to the telephone numbers listed on the cover page of this manual. To fully understand this manual and the operation of the All Sport 5000 Series console; Daktronics recommends that all general sections be read in conjunction with specific sport(s).

Important Safeguards

1. Read and understand all instructions.
2. Do not drop the control console or allow it to get wet.
3. Do not let any power cord touch hot surfaces or hang over the edge of a table that would damage or cut the cord.
4. If an extension cord is necessary, a three-pronged, polarized cord should be used. Arrange the cord with care so that it will not be tripped over or pulled out.
5. Always turn off and/or unplug the control equipment when it is not in use. Never yank the power cord to pull the plug from the outlet. Grasp the plug and pull to disconnect.
6. To avoid electrical shock, do not disassemble the control equipment or the driver modules. Incorrect reassembly can cause electric shock and faulty operation or permanent damage to the circuits.

The box below is an illustration of Daktronics drawing numbering system. The drawing number "7087-P08A-69945" is how Daktronics identifies individual drawings. This number is located in the bottom right corner of the drawing. The manual will refer to drawings by the last five digits and the letter preceding them. In the example, the drawing would be referred to as **Drawing A-69945**. The drawings are located at the end of each section and in **Appendix A**.

1.1 Console Overview

The All Sport® 5000 Series console is a state-of-the-art scoring and timing system. The console's liquid crystal display (LCD) will guide you through the operation of the system.

As a safety feature, this product has a 3-wire ground type plug equipped with a third (grounding) pin. This plug only fits into a grounding-type power outlet.

Note: If you are unable to insert the plug into the outlet, contact a qualified electrician to replace the obsolete outlet.

When opening the packages, inspect for shipping damage such as rattles and dents. See that all equipment is included as shown on the packing slip. Immediately report any deficiencies to Daktronics. Save all packing materials for shipping if warranty repair or exchange is needed.

1.2 Revision History

Version 1.0 **Release Date: 3 January 2000**

- Initial software release

Version 1.0.1 **Release Date: 11 January 2000**

- Fixed the clock =0 indicator (period end) so it will update when count up/down is changed
- Made the shot clock not blank when the clock is set to count up
- The time-of-day (TOD) clock only works with 60Hz, made so it will work with 50Hz power also. This includes having it count this in the tenths/hundredths field so the TOD will be in sync with the driver time
- The timeout ON/OFF key does not allow for a cold key exit once it is in edit of the time
- Increase the refresh rate of the drivers
- When set to TOD display, the TOD was not being sent out on RTD
- Modified the soccer and baseball settings function to check if it is called while in the game or before the game for certain settings that change what is displayed on the scoreboards

Section 2: Basic Operation

2.1 Console Operation

The console face consists of a 2-line x 16-character liquid crystal display (LED), sport specific insert, numeric keypad, operation keys, main clock keys, and LEDs for status. In most cases, the top line of the LCD shows the main clock time, direction the clock is counting, and when the main horn is sounding. Generally, the bottom line of the LCD shows the HOME and GUEST team scores.

Throughout the manual the names or letters of *keys* on the keyboard are enclosed in arrows (such as <ENTER>). The standard fixed keys and functions on the right side of the console are explained in **Section 2.6**. All of the keys that pertain to a specific sport code insert are explained in detail in the section of the manual for that specific sport.

In addition, Quick References and Menu Flowcharts for the Standard Keys and many of the individual sports are provided in **Appendix D**.

2.2 Sport Inserts

Sports inserts are used to allow a single console to control multiple sports. Select the proper insert from the chart below and slide it into the insert opening on the left side of the console until it stops. To remove a sport insert, pull on the tab that extends from the left side of the console. The insert will easily slide out.

If an insert is lost or damaged, a copy of the insert drawing, located at the end of each section, can be used until a replacement can be ordered.

Use the labels provided in **Appendix B** to attach the correct code number to each sport insert. Write the code number in the following table and in the space provided in the section of this manual for that sport.

If you do not know the code number for your scoreboard, refer to **Appendix B** in this manual. If you do not know the model number of your scoreboard, refer to the **Installation and Maintenance** manual provided with the scoreboard.

2.3 Sport Insert Operation Concepts

A sport insert identifies the actions keys required in the normal course of operation for that specific sport. In most cases, pressing a key immediately changes the scoreboard. Sometimes a sequence of keys must be pressed before a change is noticed on the scoreboard. Keys that require entry of additional information are marked by a dot. This additional information usually is a number followed by the <ENTER> key.

Keys with arrows activate an indicator (possession, bonus, etc.) on the scoreboard. The direction of the arrow selects the appropriate team (home or guest).

Some keys have a **+1**, **+2** or **+3**. By pressing one of these keys once, the corresponding field on the scoreboard (such as team score or period) increments (increases) by the amount printed on the key. A key with a **-1** decrements (decreases) by one and a key with a **+1** increments (increases) by one.

On most inserts, certain keys have been grouped together under the heading **Home** or **Guest**. These keys are **team** keys and work the same for both teams. They affect the statistics for that one team. Keys not under one of these headings are **game** keys. They are general keys for the progress of the game (such as period or quarter). Other keys have been blocked together to emphasize that these keys work together.

2.5 Setting Radio Channels

Reference Drawings:

- Channel Selection; Single Control Console, Gen IV **Drawing A-180566**
- Channel Selection; Single Broadcast Group; Gen IV..... **Drawing A-180922**
- Channel Selection; Multiple Broadcast Group, Gen IV **Drawing A-180923**

The radio receiver units used in the scoreboards have a channel-setting switch that can be set from 1 through 8 (channels 0, and 9-15 are not used). A radio receiver will accept data from a console transmitter with the same channel (and broadcast group) setting. The drawings, listed above show how to install the All Sport 1600 in order to operate one scoreboard or multiple scoreboards at a time.

The receivers also have a jumper that can be used to select broadcast group 1, 2, 3 or 4. A "Broadcast Group" defines a group of radio receivers that in addition to "listening" to the channel selected on the channel switch will also "listen" for data broadcast on their broadcast channel. There are four broadcast groups available.

In this type of system, the receiver unit at the scoreboard must have the channel switch set to a specific channel. The operator must know which channel the board is set on. The operator must then enter the specific channel during console startup when prompted to do so.

Each radio receiver will accept data sent from the broadcast channel of its respective broadcast group. This is selected by setting the transmitter radio (from the console) to the respective broadcast group (either 1, 2, 3 or 4). Every radio receiver will also accept data sent from the "Master Broadcast" channel. This is selected when a transmitter (console) radio is set to Broadcast Group 0 (BCAST 0) and Channel 0.

The channel number and broadcast group set on the radio installed in each scoreboard can be verified by cycling power to the scoreboard. Approximately seven seconds after power up, the scoreboard will show the current channel in the scoreboard clock digits. A CXX will first be shown where XX is the current radio channel number. This will be followed by BXCY where X is the current broadcast group and Y is the current channel number within this broadcast group.

There are three different radio scenarios that can be accommodated.

1. Single Controller System:

In a single controller system, all radio receivers and all scoreboards receive signal from the same All Sport console at all times. The default channel and broadcast group settings on the receiver are not typically modified. An example of this type of system is a typical high school football installation.

2. Multiple Controller System w/Single Broadcast Group:

In a multiple controller system with a single broadcast group, there are additional All Sport Controllers for controlling multiple scoreboards. There is never a scenario where groups of scoreboards that were run by individual controllers need to be run by a single controller. An example of this type of system is a softball complex with multiple fields and a scoreboard on each field.

3. Multiple Controller w/Multiple Broadcast Groups:

In a Multiple controller with Multiple Broadcast (Split Court Operation) system, there are additional All Sport Controllers that can control multiple scoreboards. The broadcast group jumper is used to select broadcast group 1, 2, 3, or 4. By changing All Sport settings to a Broadcast address, a single All Sport Controller can control all scoreboards or specific groups of scoreboards (defined by the broadcast group). One example of this scenario is split court operation in basketball installations, where scoreboards are used to score multiple games at once, but can be grouped together to show one game if necessary. Refer to the drawings listed on the previous page for more information.

The All Sport Console will automatically detect when a radio transmitter is installed and will prompt the user for transmitter settings.

The All Sport Console will show the current transmitter radio status on the LCD when a code is entered. The following table describes broadcast group and channel settings.

Single Controller Systems Channel Setting

Typically all single controller systems will use the default setting BCAST = 1, CHAN = 1. All radio receivers must be set with a switch setting of 1 with the Broadcast 1 (BCAST 1) jumper set.

If you suspect interference from a nearby Daktronics system, press <CLEAR> at the "RADIO SETTINGS" prompt to change the channel number.

Typically all multiple controller systems will use channel 1 for the first controller. All other controllers will use sequential channel settings (2-8). The following table describes broadcast channel and channel settings.

Multiple Controller w/Single Broadcast Group Channel Setting

Typically all single controller systems will use Broadcast 1 and Channel 1 for the first controller and Channels 2-8 for all remaining controllers. All radio receivers must be set with a switch setting corresponding to the console controlling the scoreboard and a Broadcast 1 (BCAST 1) jumper set.

If you suspect interference from a nearby Daktronics system, press <CLEAR> at the "RADIO SETTINGS" prompt to change the channel number.

- Completes an action. The asterisk is a reminder that this key is to be pressed when an asterisk appears on the LCD.
- Serves as <YES> for input prompts.

Clear/No

The <CLEAR/NO> key has two functions:

- Clears the LCD of numerical information.
- Serves as <NO> for input prompts.

Edit

The <EDIT> key allows the user to select which field on the scoreboard to be edited (such as team score). After pressing the <EDIT> key, press one of the increment or decrement keys for the desired field on the scoreboard. Then simply enter the value you wish to display and press <ENTER> to accept.

Press <**HORN**> to sound the main horn. The horn sounds as long as the key is pressed. The horn stops sounding when the key is released.

2.7 Remote Start/Stop Controls

Main Clock Control

The remote Start/Stop control box plugs into J4 on the back of the All Sport 5000 console. This unit has a rocker switch for Start/Stop and a momentary button for horn. The Start/Stop switch starts and stops the main timer. The horn button sounds the horn as long as the button is pressed.

Shot Clock Control

The remote shot clock control box plugs into J7 on the back of the All Sport 5000 console. This unit has a rocker switch for Start/Stop and a momentary button for reset. When the reset button is pressed, the shot clock timer is changed to the reset value and stops the timer from decrementing. The shot clock timer restarts when the reset button is released. In independent mode, the Start/Stop switch starts and stops the shot clock timer when pushed, but does not stop when the main clock is stopped. When in synchronized mode, the shot clock timer will stop and start with the main clock switches only if it is running in the beginning.

2.8 General Multi-Purpose Timer Information

There is no insert for the Multi-Purpose Timer codes. Code 99 is used to operate the multi-purpose timer.

Note: The Multi-Purpose Timer is a general timer used for 2, 4 and 6 digit time displays. The timer will count up or down through hours, minutes, and seconds. The information will shift on the 2 and 4 digit displays to show the most significant time values as the time changes. The Multi-Purpose Timer code is also used as a Time-of-Day code by accessing the Time of Day Menu through the Menu Key. The segment Timer may also be accessed through the Menu Key.

Standard Keys

The keys that are used by the multi-purpose timer are <START>, <STOP>, <SET MAIN CLOCK>, <COUNT UP/DOWN>, <AUTO HORN>, <MANUAL HORN> and <MENU>. The key functions are explained in more detail in **Section 2.6**.

Accessing the Multi-Purpose Timer

Turn on the console, enter multi-purpose timer code and press <ENTER>.

Press the <MENU> key and press the down or up arrows until the following message is displayed:

3.1 Segment Timer Overview

The segment timer is a multi-function timing system and has multiple purposes. The operation of the segment timer is determined by ninety-nine segments of pre-programmed length. The segment timer will count down starting at the segment number that is set as **First Segment**. When the first segment is completed, the Segment Timer will count the preset **Interval Time** and proceed with the next segment. The timer will continue counting segments until the segment number that is set as **Last Segment** is complete. It then will reset to the segment saved as the **First Segment** and will either begin counting down or wait for the **<START>** key to be pressed depending on the **<AUTO STOP>** setting. Refer to **Subsection Auto Stop** in this section to set the segment-stopping feature.

The first and last segment values can be used to set up specific practice sessions. For example, the practice session for one sport could be programmed for five minute segments on segments 1-10 while another might use 10 minute segments on 11-20. Set the first segment and last segment values to the desired segment numbers for the session and the console will count down each of the segments in order. It may also be set to either stop on the last segment or loop back to the first segment segments again based on the **<AUTO STOP>** setting.

The segments values will be saved when the console is turned off and will be the same values regardless of the sport that was used to access the segment timer.

3.2 Accessing Segment Timer

4.4 Settings

The user can edit the following settings when **Edit Settings** has been selected from the Main Menu.

Main Clock

Note 1: The settings entered for **Main Clock** are used with the <SET MAIN CLOCK> key.

Note 2: The period, break, and overtime lengths are used differently depending on the direction of the main clock. For count down, the main clock is set to the selected length, decrements towards zero, and stops at zero. For count up, the main clock is set to zero, increments towards the selected length, and stops when the selected length is reached.

LCD Display	Action
<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"> <p style="text-align: center;">MAIN CLOCK-TIME PERIOD HH:MM:SS</p> </div> <p>HH:MM:SS = current setting</p>	<p>Enter the correct amount of time per period in minutes and seconds on the number pad and press <ENTER>.</p> <p>For example, 02:00:00 per game.</p>

Error Position

On some scoreboards the **<ERROR>** key can also display the player's position when the **Error Position** setting is on.

LCD Display	Action
<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"> <p style="text-align: center;">ERROR POSITION *ON ← → OFF</p> </div> <p>* = current setting</p>	<p>Press the left arrow key if the scoreboard can display the player position, then press <ENTER>.</p> <p>Press the right arrow key if the scoreboard cannot display the player position, then press <ENTER>.</p>

Auto Increment Pitches

When the **Auto Pitch Increment** setting is on and the AT BAT indicator for the batting team is on, the **<BALL COUNT +1>** and **<STRIKE COUNT +1>** keys automatically increment the Ball and Strike pitch count data of the team that is not at bat (AT BAT indicator off).

LCD Display	Action
<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"> <p style="text-align: center;">AUTO INCREMENT PITCHES Y/N? Auto Increment Inning

The <OUT +1> key automatically increments the inning and resets the out number to zero when:

- The Auto Inning Increment setting is on.
- The **Home** AT BAT indicator is on.
- The current out number is 3.

The <OUT +1> key turns on the **Home** AT BAT indicator when:

- The Auto Inning Increment setting is on.
- The **Guest** AT BAT indicator is on.
- The current out number is 3.

Inning Sequence

Note: The Inning Sequence setting is not displayed if the Score By Inning setting is not enabled.

Use Inning Sequence when the number of innings played exceeds the number of innings that can be displayed on the scoreboard.

Select **SHIFT** when real time data (RTD) is used to display the inning numbers. **SHIFT** moves all of the inning numbers and scores left one digit. The innings and scores automatically shift when <INNING +1> is incremented and the inning number exceeds the number of displayed innings.

For example:

Inning 1 2 3 4 5 6 7 8 9 10 becomes 2 3 4 5 6 7 8 9 10 11
 Score 0 0 1 0 2 0 0 0 0 0 0 1 0 2 0 0 0 0 0 _

5.1 General Pitch and Speed Information

Note: The pitch and speed program interfaces with the JUGS or STALKER radar gun to provide pitch and speed information. The pitch type and speed can be displayed on a matrix display, or the speed only may be displayed on a fixed digit display.

5.2 Pitch and Speed Keys

Pitch Keys

Note: In Auto mode, the pitch keys are not used.

The keys on the left side of the keypad are used to select the type of pitch for manual display mode. In manual display mode the console waits to send the received pitch speed until a pitch type key is pressed. Once a pitch type is selected, the pitch data is updated on the display and sent as Real Time Data (RTD.)

Display Speed

<DISPLAY SPEED> is used in manual mode to send the speed to the display as speed only (blank frame.)

A TYPICAL SCENARIO FOR THIS SETUP IS A BASKETBALL COURT THAT CAN BE RUN IN FULL COURT, HALF COURT, OR QUARTER COURT SETUP. THE INFORMATION BELOW WILL APPLY TO ANY SPORT OR SET OF SCOREBOARDS THAT NEED TO HAVE MULTIPLE CONTROL OPTIONS.

EACH SCOREBOARD RADIO RECEIVER WILL NEED TO BE SETUP; YOU CAN HAVE UP TO 4 CHANNELS IN EACH BCAST GROUP; CHANNEL 1 THRU 4. REFER TO DRAWING 1110-R01A-180514 OR 1110-R01A-180521 FOR CHANNEL SETTING INSTRUCTIONS.

FOR ALL SCOREBOARDS IN ONE GROUP, SET J5 = BCAST1. THEN SET THE CHANNEL # OF EACH SCOREBOARD TO A DIFFERENT CHANNEL NUMBER FROM 1 THRU 4. THIS WILL BE BROADCAST GROUP 1 (BCAST = 1).

FOR ALL SCOREBOARD IN THE OTHER GROUP SET J5 = BCAST2. THEN SET THE CHANNEL # OF EACH SCOREBOARD TO A DIFFERENT CHANNEL NUMBER FROM 1 UP TO 4. THIS WILL BE BROADCAST GROUP 2 (BCAST = 2).

TO RUN ALL SCOREBOARDS AT ONCE; SET THE CONTROL CONSOLE TO BCAST = 0, CHANNEL = 00.

TO RUN ALL SCOREBOARDS IN BROADCAST GROUP 1 AT ONCE SET THE CONTROL CONSOLE TO BCAST = 1, CHANNEL = 00
 TO RUN ALL SCOREBOARD IN BROADCAST GROUP 2 AT ONCE SET THE CONTROL CONSOLE TO BCAST = 2, CHANNEL = 00

TO RUN EACH SCOREBOARD INDEPENDENTLY SET THE CONTROL CONSOLE TO THE APPROPRIATE BROADCAST GROUP (BCAST = 1 OR 2), AND THEN SET THE CHANNEL TO THE SCOREBOARD CHANNEL. EX. TO RUN SCOREBOARD #3 IN THE SETUP ILLUSTRATED ABOVE, SET THE CONTROL CONSOLE TO BCAST = 2, CHANNEL = 01.

THIS IS A STEP BY STEP EXPLANATION USING GEOMETRY TO CALCULATE THE "SPEED ADJUST" VALUE IN THE MENU OF THE ALL SPORT PITCH AND SPEED PROGRAM, CODE 5500.

A CALCULATOR WITH ABILITY TO DO SIN, COS, TAN IS REQUIRED.
DO ALL CALCULATIONS TO .XXXX VALUES.

STEP 1.

MEASURE, IN FEET, DISTANCE FROM PITCHER'S MOUND STRAIGHT BACK, PAST HOME PLATE TO THE AREA WHERE GUN IS. WRITE YOUR MEASUREMENT ON THE _____ PROVIDED ON THE TRIANGLE PICTURE BELOW.

STEP 2.

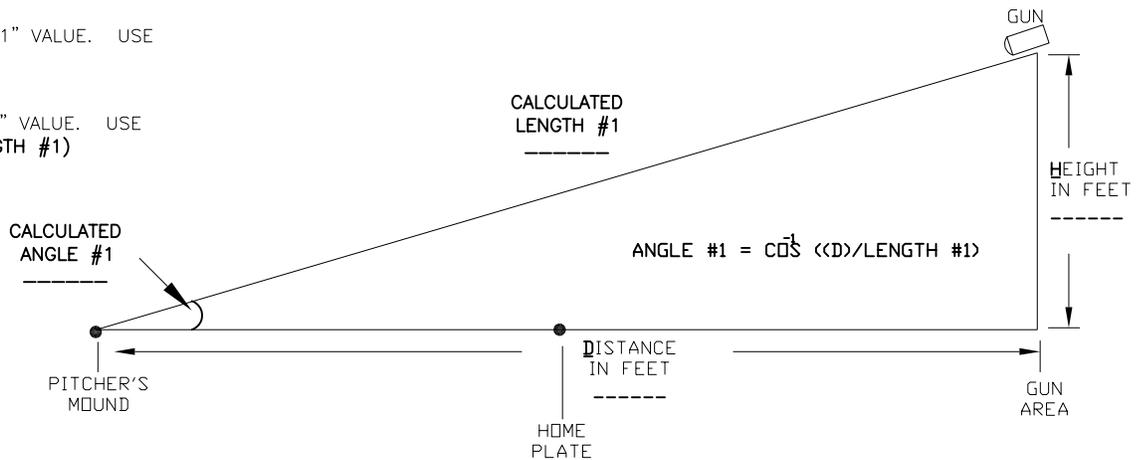

MEASURE, IN FEET, HOW HIGH THE GUN IS OFF THE GROUND. WRITE YOUR MEASUREMENT ON THE _____ PROVIDED ON THE TRIANGLE PICTURE BELOW.

STEP 3.

CALCULATE THE "LENGTH #1" VALUE. USE
 $LENGTH \#1 = \sqrt{D^2 + H^2}$

STEP 4.

CALCULATE THE "ANGLE #1" VALUE. USE
 $ANGLE \#1 = \cos^{-1}(D/LENGTH \#1)$

STEP 5.

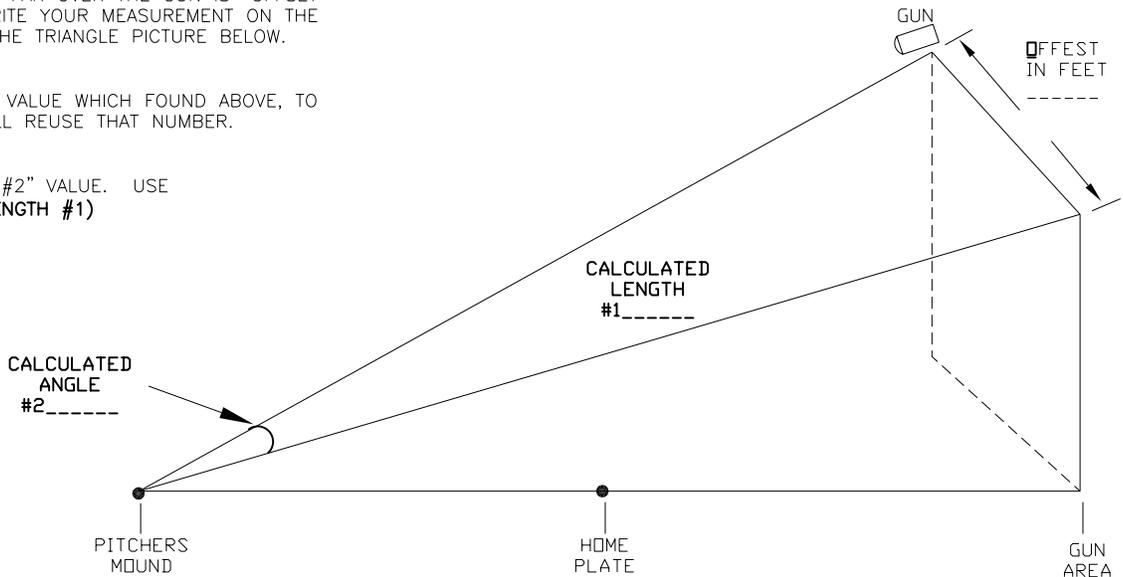

MEASURE, IN FEET, HOW FAR OVER THE GUN IS "OFFSET" FROM HOME PLATE. WRITE YOUR MEASUREMENT ON THE _____ PROVIDED ON THE TRIANGLE PICTURE BELOW.

STEP 6.

COPY THE "LENGTH #1" VALUE WHICH FOUND ABOVE, TO THIS PICTURE. YOU WILL REUSE THAT NUMBER.

STEP 7.

CALCULATE THE "ANGLE #2" VALUE. USE
 $ANGLE \#2 = \tan^{-1}(O/LENGTH \#1)$

STEP 8.

ADD CALCULATED ANGLE #1 TO CALCULATED ANGLE #2. ENTER VALUE HERE _____

STEP 7.

CALCULATE SPEED ADJUST VALUE. USE
 $SPEED \ ADJUST \ VALUE = \cos(ANGLE \#1 + ANGLE \#2)$.

CALCULATIONS SHOWN WILL NOT BE 100% EXACT. ADDITIONAL ADJUSTMENTS CAN BE MADE AS REQUIRED. *** THE LOWER THE NUMBER, THE FASTER SPEED THE GUN READS. ALL ADJUSTMENTS SHOULD BE DONE AT .00XX LEVEL. ***
