WARRANTY SUMMARY

Teledyne warrants that the products it manufactures will be free from defects in materials and workmanship for a period of one year from the date of delivery from factory.

If a product proves defective within the respective period, Teledyne will provide repair or replacement as described in the complete warranty statement.

To arrange for service or obtain a copy of the complete warranty statement, please contact your nearst Teledyne distributor.

EXCEPT AS PROVIDED IN THIS SUMMARY OR THE APPLICABLE WARRANTY STATEMENT, TELEDYNE MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED,INCLUDING WITHOUT LIMITA-TION THE IMPLIED WARRANTIES OR MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL TELEDYNE BE LIABLE FOR INDIRECT, SPECIAL OR CONSEQUEN-TIAL DAMAGES.

Table of Contents

1. Product Description

The Gas Analysis Computer is a multiple -function analyzer with integrated calculating functions. Measurements are in accordance with the general regulations set forth by the BIMSchV (German Regulations concerning the protection against harmful effects on the environment) at all kinds of combustion plants within the framework of the monitoring of exhaust systems.

a) Measurement and calculation parameters for monitoring exhaust systems and for determining the efficiency of combustion plants:

Measured Values:			
	T.Gas	Waste or flue gas temperature	°F or °C
	T.Room	Air or ambient temperature	°F or °C
	O2	Oxygen content	% Volume
	CO	Carbon monoxide	ppm - mg/m³ - mg/kWh
	NO	Nitrogen monoxide (Option)	ppm - mg/m³ - mg/kWh
	SO2	Sulphur dioxide (Option)	ppm - mg/m³ - mg/kWh
	Draft	Draft or Pressure	inches of H2O (iWC)

Calculated Values:			
	CO2	Carbon dioxide	% Volume
	CO 0%	Carbon monoxide, undiluted	ppm
	Effi.	Combustion efficiency	%
	Ex.air	Excess air value	
	Losses	Waste gas losses	%
	NOx	Nitrogen oxides (optional)	ppm - mg/m³ - mg/kWh
	T.Diff	Differential temperature (TG-TA)	°F or °C

b) Measuring Procedure

Temperature Measurem.: K-type thermocouple (NiCr-Ni) for waste or flue gas temperature
K-type thermocouple (NiCr-Ni) for air or ambient temperature.

O2-Measurement : Electrochemical measuring cell.

CO-Measurement : Electrochemical measuring cell.

Draft Measurement : Piezo-resistive principle with internal temperature compensation.

Measuring Duration: Short-term memory measurements of max. 60 minutes are possible, followed by a new calibration phase with ambient air.

Waste Gas Measurement : Via an external water separator and filter, the waste gas is fed to the sensors by means of a gas feed pump. The pump capacity during the feeding phase is approx. 0.8 l/min.

Sensor Calibration: 60 seconds after switching on the instrument.

CO Concentration: CO sensor with H_2 compensation, measuring range 0 - 4.000 ppm. Cutoff threshold at 4.000 ppm for sensor protection via separate flush pump.

The remaining measuring values are not affected. The instrument is switched on again at a value of 1.600 ppm.

Waste Gas Sampling: By means of a waste gas sampling probe with retainer cone.

c) Instrument Description

Electrical Supply:	NiCad battery 6V/4.0 Ah, external charger.
Display:	With backlight; alphanumeric and graphic display. 4 lines of 16 characters each, plus menu line.
Computer Interface:	RS 232.
Printer Interface:	Pin Printer (Normal Paper).
Printer:	External infrared thermo-paper printer.
Memory:	100 memory blocks
Adm. Operating Temp.:	+ 40 °F to + 104 °F (+ 5°C to + 40°C).
Adm. Storage Temp.:	-22 °F to + 140 °F (- 30°C to + 50 °C).
Mech. Dimensions:	10.6" x 9.6" x 6.9" (270 x 245 x 175 mm).
Weight:	8.0 lbs (3,8 kg).
Standard Version:	Instrument, battery charger, combined flue gas temperature probe / watertrap and hose assembly with measuring cone, ambient air temperature sensor, carrying case and manual.

2.   Physical Data

Measuring ranges:
(General Specifications)

	CO	0 ... 4.000 ppm
	CO-0%	0 ... 9.999 ppm
	O2	0 ... 20,9 % Volume
	T.Gas	+ 32 °F to + 1.850 °F (0 °C ... + 1.000 °C)
	T.Room	-5 °F to + 212 °F (- 20 °C ... +100 °C)
	Draft/Pressure	$\pm$ 60 inches of H_2O ($\pm$ 150.0 hPa)
	CO_2	0,0 ... CO2 max % Volume
	Losses	0 ... 100%
	Efficiency	100 ... 0%
	Excess air	1 ... 99.999.

Optional:

	NO x, NO	0 ... 2.000 ppm
	SO 2, NO	0 ... 2.000 ppm
	CO High	0 ... 1.0 % Volume (10.000 ppm)

2.1   Calculation Formulae

Calculation of the CO2 value:

$$CO2 = CO2max * \left(1 - \frac{O2}{20.9}\right) \text{ in \% Volume}$$

CO2max: Max. CO2-value (fuel-specific) in % Volume.
O2:   Measured oxygen content in % Volume.
21:               Oxygen content of the air in % Volume.

Calculation of the waste gas loss:

$$qA = (\text{T.Gas} - \text{T.Air}) * \left(\frac{A2}{21 - O2} + B\right) \text{ in \%}$$

T.Gas: Waste / flue gas temperature in °F or °C.
T.Room: Combustion / ambient temperature in °F or °C.
A2, B: Fuel-specific factors.

Calculation of the excess air value (Lambda):

$$Lambda = \frac{CO2max}{CO2} = \frac{20.9}{20.9 - O2}$$

Calculation of the combustion efficiency value (Eta):

$$Eta = 100 - qA \text{ in \%}$$

Calculation of CO 0% (undiluted):

$$CO0\% = CO * Lambda \text{ in ppm}$$

3. Technical Data

Waste or Flue Gas Temperature Measurement

Sensor: K-type thermocouple
Range: +32 °F to 1.850 °F (0 to +1.000 °C)
Resolution: 0.1 °F or °C
Accuracy: ± 2°F / ± 1°C (0 to +400 °C)
± 0.5 % of reading (up to 1.000 °C)

Combustion Air or Ambient Temperature Measurement

Sensor: K-type thermocouple
Range: -5 °F to +212 °F (-20 to +100 °C)
Resolution: 0.1 °F or °C
Accuracy: ± 2°F / ± 1°C (0 to +100 °C)
± 6°F / ± 3°C (-20.0 to 0.0 °C)

Draft or Pressure Measurement

Sensor: Piezoresistive pressure sensor
Range: ± 60 in. H_2O or ± 150 hPa
Resolution: 0.01 in. H_2O or hPa
Accuracy: ± 0.08 in.H_2O or ± 0.02 hPa (up to ± 8.0 in. H_2O or ± 2.00 hPa)
± 1 % of reading (up to ± 80.0 in. H_2O or ± 20.0 hPa)
± 3 % of reading (above ± 80.0 in. H_2O or ± 20.0 hPa)

Oxygen (O2) Measurement

Range:	0 to 20.9 % Volume
Accuracy:	±0.2 % Volume
Resolution:	0.1 % Volume
Sensor:	Electro-chemical cell
Response time (T97):	< 70 sec

Carbon dioxide (CO2) Calculation

Calculated from O2 measurement

Range:	0 to CO2 max.
Accuracy:	±0.2 % Volume
Resolution:	0.1 % Volume
Response time (T97):	< 70 sec

Carbon monoxide (CO) Measurement (with H2 compensation)

Range:	0 to 4.000 ppm
Accuracy:	±5 ppm (up to 150 ppm)
	±5 % of reading (up to 4.000 ppm)
Resolution:	1 ppm
Sensor:	Electro-chemical cell
Response time (T90):	< 60 sec

Options

Nitrogen monoxide (NO) Measurement
Range: 0 to 2.000 ppm
Accuracy: ± 5 ppm (up to 150 ppm)
                                                     ± 5 % of reading (up to 2.000 ppm)
Resolution: 1 ppm
Sensor: Electro-chemical cell
Response time (T90):   < 60 sec

CO Measurement (without H2 compensation)
Range: 0 ... 1.0 % Volume (10.000 ppm)
Resolution: 0.01 % Volume
Sensor: Electro-chemical cell
Response time (T90):   < 60 sec

Sulphur dioxide (SO2) Measurement
Range: 0 to 2.000 ppm
Accuracy: ± 5 ppm (up to 150 ppm)
                                                     ± 5 % of reading (up to 2.000 ppm)
Resolution: 1 ppm
Sensor: Electro-chemical cell
Response time (T90):   < 60 sec

6.5 Draft Measurement

Start draft measurement

from the measuring program:

<div style="text-align:right">mbar
hPa</div>

Attention:

No pressure values Exceeding ± 60 inches of H2O

(± 150 hPa mbar)!

Note:
For draft Measurement, connect air tube to the positive (+)
connector only.

Hold	Hold measured values	S1

Return	Terminate draft measurement	S3

Before pressing the mbar/hPa key, pull the air tube off the instrument! The draft sensor is calibrated (0.00 InW or hPa).

Draft Measurem.	
T.Gas	415.4 °F
Draft	0.00 InW
Hold	Return

Carefully replace the air tube.
Wait until the measured value has stabilized.

Record the measured draft value.

This value is stored with the current measuring values.
The measuring mode is continued.

6.6 Menu Lines

Display next menu line

The menu line makes it possible to operate the instrument in a fast and easy way. Pressing the appropriate soft key (S1 to S3) accesses submenu directly and/or allows direct execution of a function.

6.8 Entering the Company Address

From the Program Start Menu:

Call up the Configuration Menu

From the Configuration Menu:

Call up Address Entry

| Edit | Switch on the Entry Mode

Entry of letters, figures and special characters
as in the memory mode (Section 6.6.4.2).

| Select | Advance to the next line.

| Return | Terminate Address Entry

```
Sound              Yes
Illum. off           0
Save            < E >
Continue      <Start>

  Sound  Illumination  Reset
```

```
 Edit.   Printerheader
COMPANY
Address
Phone-No.

  Edit   Select   Return
```

The entered or corrected company
address is now saved
and will always appear on the
printout of measuring data.

7. System Maintenance

Waste Gas Cleaning System:

Attention: **Empty the condensate reservoir completely after each measuring operation. Water residues within the measuring instrument will destroy the pumps and sensors!**
Damage of the filter and / or improperly fitted filter will greatly decrease o eliminate the filter function and will eventually destroy pumps and sensors.

Check the microfilter for contaminations and replace as necessary.

If the pump capacity is reduced, exchange the diaphragm filter.

Make sure that threaded parts are straight when placed on and tighten them moderately. Ensure sufficient sealing by means of O-rings.

Plug-type elements and flanges: Remove any gas residues. Grease with Vaseline.

Storage: Store in a cool and dry environment at a temperature of approx. 60 °F (20 °C).

Damages: **Guarantee and warranty obligations do not apply to damages caused by improper handling, negligence and grave external influences.**

8. RS - 232 Interface

Provides connections for special Service and Data Communications.

9. Battery / Line Voltage Operation

Battery operation: Maximum 36 hours of continuous measuring.

Battery charger: External charger 110 V~/ 60 Hz.
Intelligent monitoring by means of instrument-integrated microcontroller

To maintain the service life and performance of the NiCad battery, please observe the instructions under 'Information on charging the battery'.

**Status display of the
storage battery:** Shown on the bottom line of the display during the calibration phase.
During the measurement, the status of the battery can be read from
The 'Info' Menu.

Information on Charging the Battery

PEM9002 is equipped with an NiCad storage battery. The service life and capacity of the battery are considerably affected by the way the instrument is charged and used. In order to make the handling safer, the instrument has a load management unit.

If an NiCad battery is, for example, always charged from 80% to 100% and never run down to the final discharge voltage, it will lose some of its capacity. This is called the 'memory effect' , i.e. the battery remembers to what extent it is run down.

A part of this memory effect is suppressed in the PEM9002 in that the battery cannot be recharged until it has dropped below 60%.

Constant overcharging, too, has adverse effects on the NiCad battery. In order to prevent this, the charged capacity, the voltage and the temperature of the battery are monitored in the PEM9002.
When predefined limits are exceeded, the charging process is interrupted. After the appropriate parameters have been neutralized the charging process is automatically restarted again.

The service life of the NiCad battery can be significantly reduced when the instrument is operated at temperatures below 40 °F (5°C).

The graphic charge-level indicator of the PEM9002 (10 battery symbols), which appears in the one-line status display during the calibration phase, helps the user estimate correctly the capacity of the battery. The instrument continuously measures the incoming and outgoing current during operation and charging. Under normal operating conditions, the instrument should be operated until the battery is completely run down. When this advice is followed, the actual capacity of the NiCad battery will definitely be shown on the display.

Storing the instrument is only recommended if the NiCad battery is fully charged. If the instrument has to be stored for a prolonged time (approx. 2 weeks or longer) it is recommended to leave the instrument connected to the charger. The same applies to low-level discharge of the battery: leave the instrument connected to the charger for a longer period (up to 12 hours).
If the instrument is operated at temperatures exceeding the admissible temperature range, if the NiCad battery is older, or if incomplete charging cycles (charging/discharging) are performed, it is possible that the display no longer corresponds to the current status of the battery.

In this case the display is corrected as follows: discharge the battery by switching on until the instrument switches off automatically. After that, connect the instrument to the associated charger and wait until the end of the charging period (max. 4 hours). When the charging process is completed, the PEM9002 switches off automatically.
Used or Dead Battery

For replacement of a Used or Dead battery, the analyzer has to sent back to the supplier / manufacturer.

10. Loading Paper

Printer Ribbon

Paper

Printer Compartment Door

While pushing paper into slot, hold down the red button until paper emerges.

11.1 PEM 9002 - Filters and other cleaner parts
Replacement Parts(Part No.): 20594 (01) / 20370 (02) / 20596 (03) / 22049 (04) / 21954 (05) / 21779 (06) / 20919 (07) / 20592 (08) / 20921 (09) / 20365 (10) / 20591 (11) / 21955 (12) / 22017 (13) / 21427 (14)

Maintenance: *- Empty the condensate reservoir after each measuring operation.*
     - Check the microfilter for contaminations and change as necessary.
     - If the pump capacity decreases, change the hydrophob filter.

Attention!   Damaging the filter or inserting it incorrectly will lead to invalid results!
     Grease all tight or stiff parts with vaseline.
