

Monitor Mount Between the Seats

Brodit offers an easy-to-use system for mounting multimedia monitors in the vehicle. It is based on a car specific mount with a monitor mount. The monitor will be placed between the front seats, giving the back seat passengers a perfect view.

The screen can be tilted and angled in order to avoid reflections. You can take the monitor with you when leaving the car. The interior of the vehicle will not be damaged, as no drilling holes is required.

The monitor mounts are listed on our web site www.brodit.se. Choose "Search Products" and under "Vehicles" you will find all monitor mounts for your vehicle!

It is easy to install a monitor in the car. First you attach a monitor mount onto the arm rest or center floor console between the front seats. The mount is car specific, tailor made for each car model and available for various monitor models. Then you attach the monitor onto the mount. It is firmly in place, and you can take the monitor with you when leaving the car.
