

# DREAMBOX

## DM 7000-S

## Instruction Manual

Warranty card  
HDD installation card

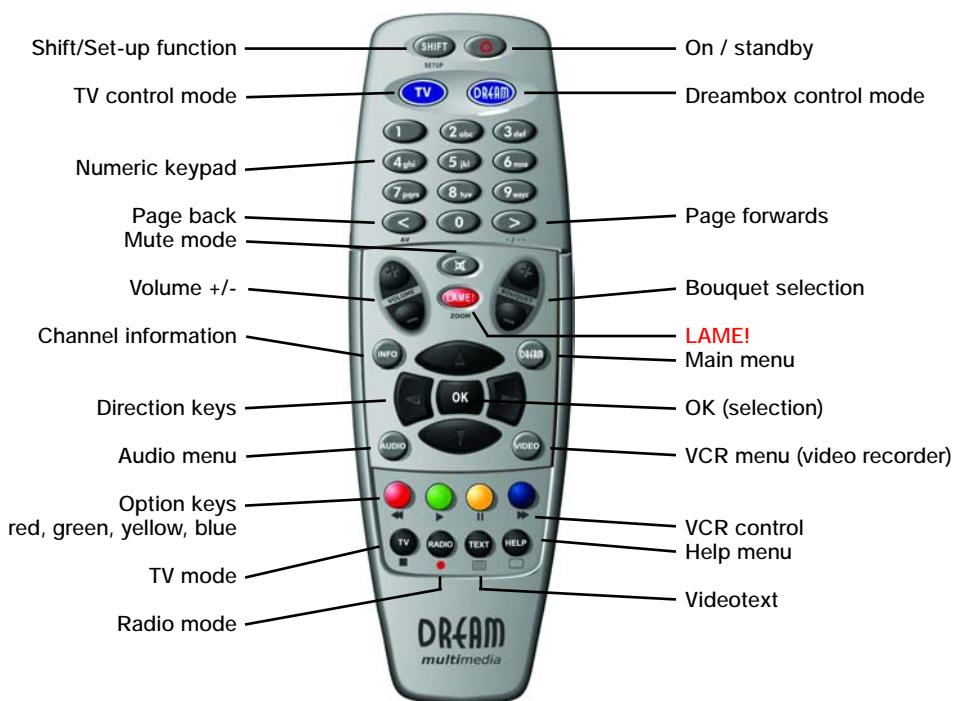

Linux OS Set-top box with PCMCIA interface for  
CA modules, for receiving clear and encoded  
ASTRA and EUTELSAT DVB programmes.

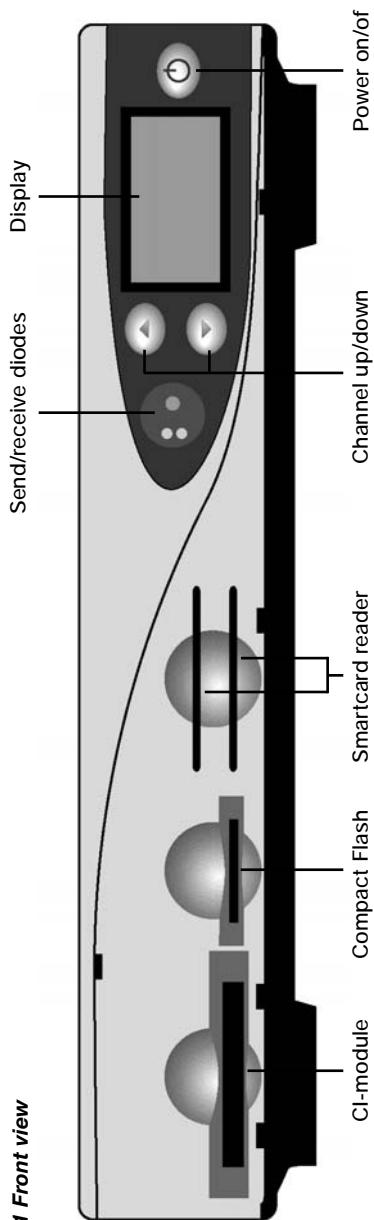

- Connector for internal hard disk
- Compact Flash reader
- Graphical display

### 4. Safety instructions

For your protection, please read the safety instructions thoroughly before starting to use your DM 7000. The manufacturer accepts no responsibility for damage which occurs as a result of incorrect handling or from failure to observe the safety instructions.

- The unit must be positioned such that it is sufficiently ventilated.
- The cover of the unit must not be covered, and there must be sufficient distance from other equipment. The ventilation ports of the device must always remain unobstructed, so that the warm air can be carried away from the interior of the unit.
- Do not place any vases or other containers with fluids in them on the unit. Water must not be allowed to drip or to spray onto the unit.
- No burning objects, such as candles or oil lamps, may be placed on the unit.
- The unit must only be operated in moderate climactic conditions.
- Never open the unit yourself! There is a risk of electric shocks. Should it become necessary to open the unit, this must be carried out by qualified personnel.

- Never introduce foreign metal objects into the slots or the ventilation ports.
- Installation or exchange of a hard disk drive may only be carried out by qualified personnel, or a dealer trained for the purpose.

## **4. Safety instructions**

---

### **WARNING!**

**Conversion or modification of the unit leads to loss of warranty if not carried out by a specialist dealer and certified in writing.**

### **WARNING!**

**We recommend that disk drives should be installed by the dealer.**

**The guarantee lapses if a hard disk is incorrectly installed.**

#### **4.1 Periods of non-use**

- If the unit is not operated for longer periods of time, it should be completely disconnected from the mains power supply.
- The unit should also be disconnected from the mains supply during electrical storms.

#### **4.2 Additional safety instructions**

- Connection to the external unit (LNB)  
Remove the power cable of the DM7000 from the mains socket before you connect or remove the cable of the LNB.
- Connection to the television  
Remove the power cable of the DM 7000 from the mains socket before you connect the SCART cable to your television.
- The unit must immediately be disconnected from the mains power supply if the power cable or socket show any signs of damage.
- The unit must immediately be disconnected from the mains power supply if it is exposed to dampness or if dampness penetrates it.
- The unit must immediately be disconnected from the mains power supply if substantial external damage is discovered.

Do not expose your Dreambox to direct sunlight, lightning or rain.

**Earthing:** The LNB cable must be earthed.

The earthing system must conform to SABS 061.

**Cleaning:** Remove the power cable of the Dreambox from the mains socket before you clean the Dreambox. Use a slightly damp cloth without cleaning agents.

Connect your Dreambox only to sockets which are suitable for the purpose.

Do not allow overloads to occur.

### **General:**

Environmental temperature +15°C ... +35°C

Atmospheric humidity < 80%

Dimensions (W x D x H): 374 mm x 230 mm x 63 mm

Weight: 1.8 kg without HDD

### 5. General notes

Check that everything has been delivered.

You should have received the following:

- 1 receiver
- 1 power cable
- 1 remote control
- 1 Instruction Manual  
(latest version available from <http://www.dream-multimedia-tv.de>)
- 1 guarantee card
- 2 batteries (1.5V microcell)
- 2 hard disk installation frames (supplied within the unit from the factory)
- 1 IDE connection cable
- 1 power cable for the hard disk

Optionally available:

- 1 infrared keyboard
- Check the battery polarity carefully and install the batteries supplied in the battery compartment of the remote control.
- Before you connect the receiver, please read the safety instructions under point 6. Safety Instructions.
- Connect the external unit (dish, LNB) with an F plug to the LNB input on the receiver.
- Connect the receiver with a Scart cable to your television (Scart socket TV), and to a video recorder or DVD player (Scart socket VCR).
- Plug the mains cable into the receiver and then into a suitable 230V / 50Hz power socket.

#### 5.1 Hifi amplifier

##### 5.1.1 Analog

To connect your Dreambox to a hifi amplifier, please use a suitable phono cable. Connect this to the receiver at AUDIO R/L and to a free input (e.g. AUX or CD) on your hifi amplifier.

##### 5.1.2 Digital

If your amplifier has a suitable optical input, connect the DIGITAL AUDIO socket on the receiver to the optical input of the amplifier with an optical cable. Sampling frequencies of 16, 22.05, 24, 32, 44.1 and 48 kHz are available. This output also provides the Dolby Digital signal (AC3) when this is broadcast.

## **5. Getting started, 6. Disposal notes, 7. Important notes on operation**

### **5.2 RS 232 serial interface**

The RS 232 interface is used to update the operating software and for pre-programming with a PC.

### **5.3 Ethernet**

The Ethernet interface can be used to update the operating software and for pre-programming with a PC.

### **6. Disposal notes**

The packaging of the DM 7000 consists exclusively of recyclable materials. Please dispose of these appropriately.

Take care that dead batteries from the remote control and electronic scrap are not disposed of in ordinary rubbish, but are properly disposed of (return to the specialist dealer, or special waste disposal).

### **7. Important notes on operation**

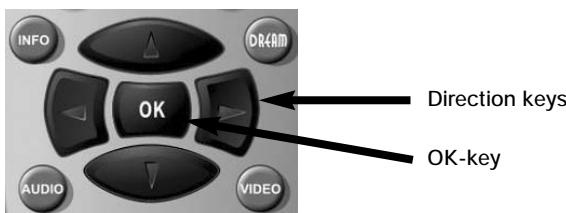

The operation of the Dreambox is greatly simplified with an OSD (On Screen Display). All available options are displayed with 4 coloured dots (red, green, yellow, blue) and can be activated with the remote control.

The options change depending on the menu, and are labelled appropriately in each menu.

You can leave all menus and channel lists with the LAME! key.

The menus are in general operated with the **OK** on your remote control.

To enter a sub-menu, confirm it with the **OK** key.

## 8. Main menu

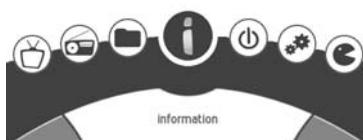

---

### 8. Main menu

This OSD (On Screen Display) is used to navigate to the individual submenus.

Here you can enter the File menu.

Here you can enter the Info menu.

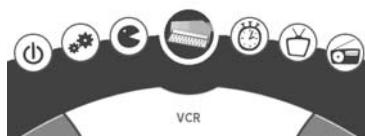

Here you can switch your Dreambox into deep standby mode.

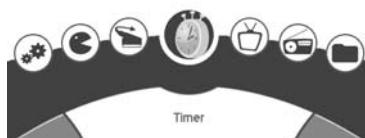

Here you can enter the Setup menu.

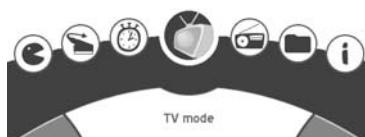

Here you can enter the Games menu.

Here you can switch the Scart connection between video input and output.

Here you can enter the Timer menu.

Switches to TV mode.

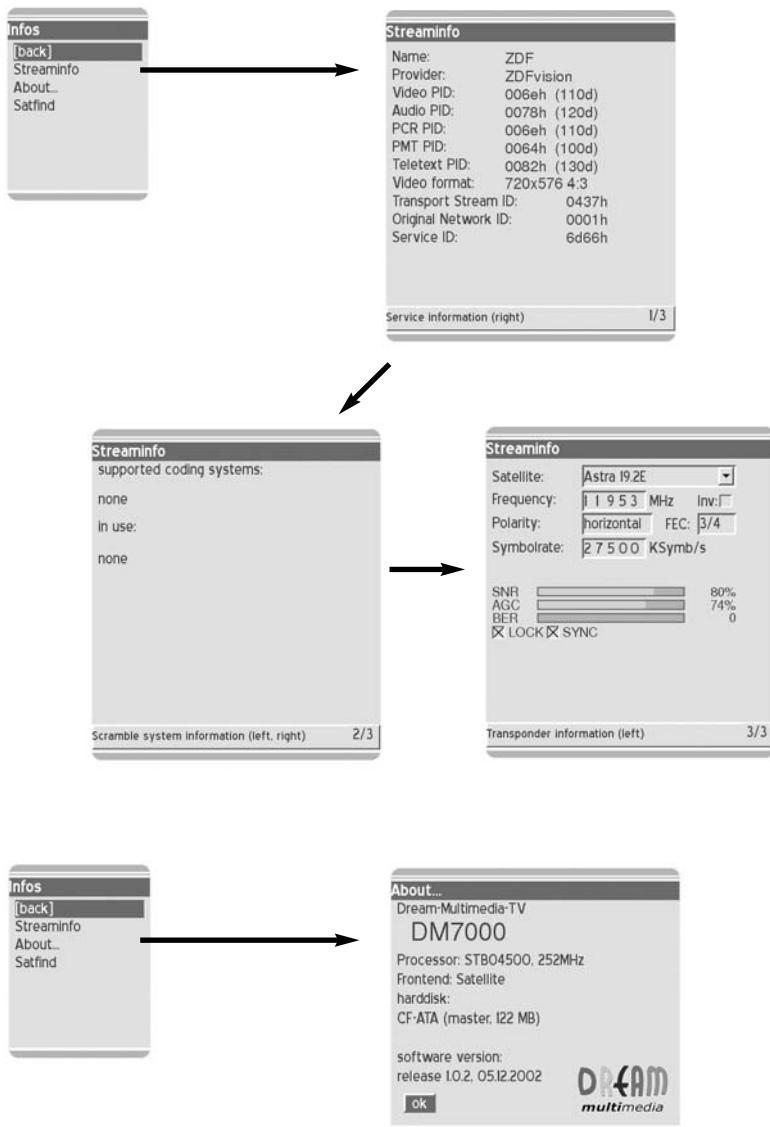

Switches to radio mode.

## 8. Main menu

### 8.1 Info menu

With the direction keys on your remote control you can enter the following sub-menus:

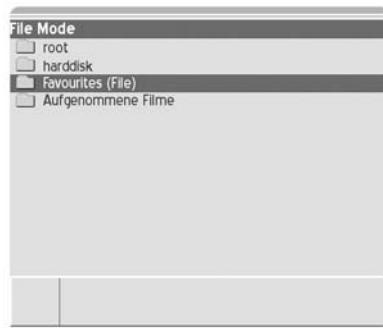

## 8.2 Games menu

In this menu, you can choose between the Snake and Tetris games, or call up the videotext decoder.

## 8.3 File menu

You can use this to manage the files on the hard disk.

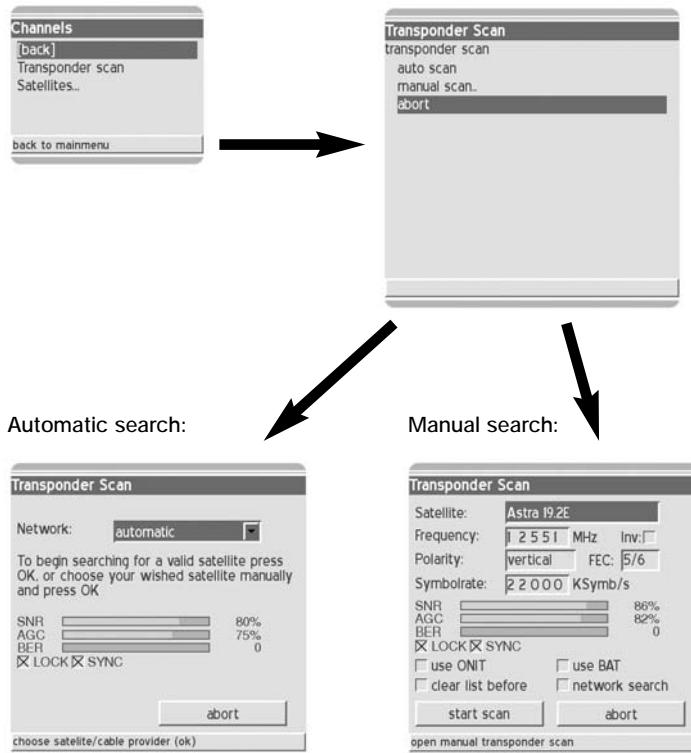

## 8.4 Set-up menu

With the direction keys on your remote control you can enter the following sub-menus.

### 8.4.1 Channels – channel search

### 8.4.2 Channels - satellites

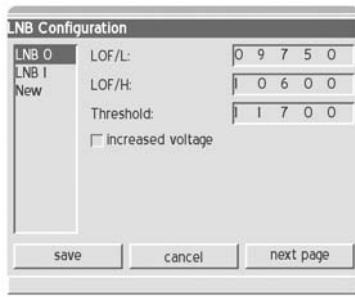

**Satelliteconfiguration**

Sat/Position	LNB	22Khz	Voltage
Astra 19.2E	0	Hi/Lo	H/V
Eutelsat 13.0E	1	Hi/Lo	H/V

close Satelliteconfiguration

With this menu you can edit the satellites, or add one or more. Satellites are added with „New“. Editing is done in the respective selection. Leave this menu with „Close“.

Under the „LNB“ item you can edit and add LNBs.

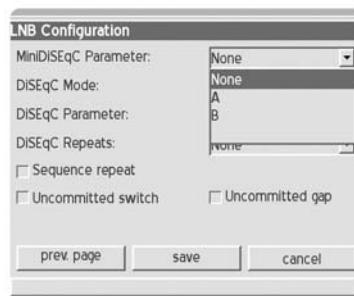

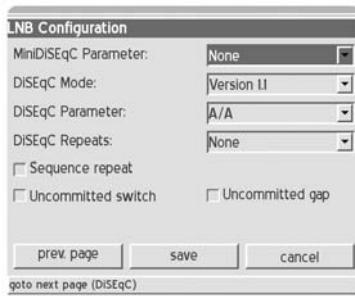

If you activate „increase voltage“, the voltage to the LNBs is increased by 0.5 volts. This is necessary for longer antenna connections, or for antenna cables with excessive attenuation.

After entering your set-up, store your settings with „Save“, or cancel.

#### 8.4.3 Channels - Satellites - LNBs

The following sub-menus provide individual adjustment of the LNBs / satellite systems, e.g. when a switch is used.

## 8. Main menu

<b>LNB Configuration</b> MiniDISEqC Parameter: <input type="button" value="None"/> <input type="button" value="Version I.I"/> DISEqC Mode: <input type="button" value="Version I.I"/> <input type="button" value="None"/> DISEqC Parameter: <input type="button" value="Version I.O"/> <input type="button" value="Version II"/> DISEqC Repeats: <input type="button" value="Version II"/> <input type="button" value="Version I.2"/> <input type="checkbox"/> Sequence repeat <input type="checkbox"/> Uncommitted switch <input type="checkbox"/> Uncommitted gap	<b>LNB Configuration</b> MiniDISEqC Parameter: <input type="button" value="None"/> <input type="button" value="Version I.I"/> DISEqC Mode: <input type="button" value="Version I.I"/> <input type="button" value="A/A"/> DISEqC Parameter: <input type="button" value="A/A"/> <input type="button" value="A/B"/> DISEqC Repeats: <input type="button" value="A/B"/> <input type="button" value="B/A"/> <input type="checkbox"/> Sequence repeat <input type="checkbox"/> Uncommitted switch <input type="checkbox"/> Uncommitted gap

<b>LNB Configuration</b> MiniDISEqC Parameter: <input type="button" value="None"/> <input type="button" value="Version I.I"/> DISEqC Mode: <input type="button" value="Version I.I"/> <input type="button" value="A/A"/> DISEqC Parameter: <input type="button" value="A/A"/> <input type="button" value="None"/> DISEqC Repeats: <input type="button" value="None"/> <input type="button" value="One"/> <input type="checkbox"/> Sequence repeat <input type="checkbox"/> Uncommitted switch <input type="checkbox"/> Uncommitted gap	<input type="button" value="prev page"/> <input type="button" value="save"/> <input type="button" value="cancel"/>
--	--

After entering your set-up, store your settings with „Save“, or cancel.

### 8.4.4 Network

Here you set up the configuration for your network.

<b>Network setup</b>
IP: <input type="text" value="10.0.0.97"/>
Netmask: <input type="text" value="255.0.0.0"/>
Nameserver: <input type="text" value="127.0.0.1"/>
Gateway: <input type="text" value="127.0.0.1"/>
<input checked="" type="checkbox"/> Configure Network
<input type="button" value="save"/> <input type="button" value="abort"/>
enter IP Adress of the box (0..9, left, right)

**IP:** Enter the IP address of your Box here  
(e.g. 192.168.0.5).

**Network mask:** (e.g. 255.255.255.0)

**Name server:** Enter a name server here

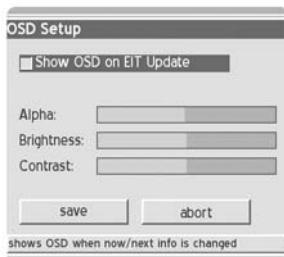

(e.g. 194.25.0.60, 194.25.0.68, 194.25.0.52 of Deutsche Telekom ([http://www.telekom.de/dtag/ipl1/cda/level4s\\_a/0,3682,17684,00.html](http://www.telekom.de/dtag/ipl1/cda/level4s_a/0,3682,17684,00.html))).

**Gateway:** Enter the standard gateway here (e.g. 192.168.0.1) (e.g. 192.168.0.1, the IP address of your router).

After entering your set-up, store your settings with „Save“, or cancel.

#### 8.4.5 OSD

This allows you to configure the OSD (On Screen Display).

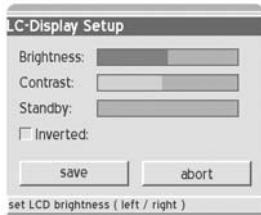

**Transparency:** Select the transparency of the OSD.

**Brightness:** Select the brightness of the OSD.

**Contrast:** Select the contrast of the OSD.

After entering your set-up, store your settings with „Save“, or cancel.

#### 8.4.6 LCD

This allows you to set up the display of your Dreambox.

This allows you to adjust brightness, contrast and stand-by brightness.

After entering your set-up, store your settings with „Save“, or cancel.

### 8.4.7 Remote control

This allows you to configure your remote control.

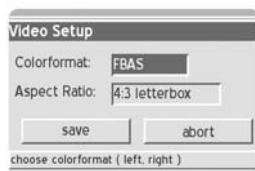

You can adjust the repeat rate and the delay rate.

After entering your set-up, store your settings with „Save“, or cancel.

### 8.4.8 Video

This allows you to configure your video set-up.

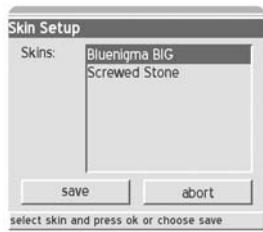

**Colour format:** Choose between RGB, SVideo and FBAS.

**Aspect ratio:** Choose between 4:3 letterbox, 4:3 panscan or 16:9 (PIN8).

After entering your set-up, store your settings with „Save“, or cancel.

### 8.4.9 Skin

This allows you to choose between different OSD skins.

**Skins:** Select your favourite skin here.

After entering your set-up, store your settings with „Save“, or cancel.  
**A new skin does not become active until you reboot!**

#### 8.4.10 Language

This allows you to choose the language for the OSD.

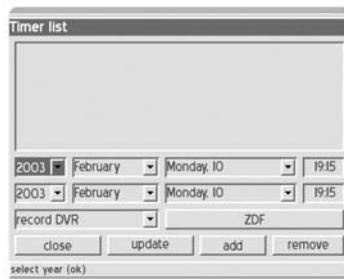

Language: select the language for the OSD.

After entering your set-up, store your settings with „Save“, or cancel.

**A change of language does not become effective until you call up the menu again!**

#### 8.4.11 Timer

This allows you to set up your recording list.

Enter the channels manually with the record options, or edit your recording list. You can also delete recording options from the EPG list here with „remove“.

After entering your set-up, store your settings with „Save“, or cancel.

### 8.4.12 Hard disc

This allows you to configure your installed hard disc.

First select the hard disk found and press „OK“ to view information about the disk, or to re-format the disc.

**Model:** the hard disk found.

**Capacity:** capacity of the hard disc connected.

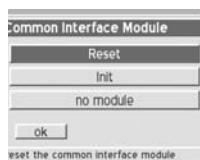

**Connection:** port master or slave.

**Status:** remaining space available on the hard disc.

To configure a new hard disc or to delete all data from the disc, please select „Format“. Otherwise, select „Close“.

## 9. Common Interface

Here you can find the options for your Common Interface.

**Reset:** This allows you to reset the Common Interface.

**Init:** This allows you to re-initialise the Common Interface.

### **10. Upgrade**

This provides the option to update the firmware of your Dreambox over the Internet.

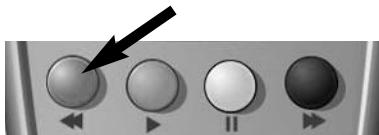

This error message appears if you have not set the gateway and name server for the Internet in the network set-up (see 8.4.4 Network).

### **11. EPG (electronic program guide)**

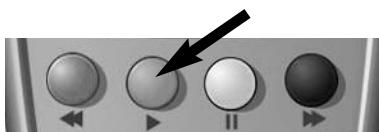

You can access the EPG lists with the red option button on your remote control.

You can then use the „OK“ key to see further information about the broadcast.

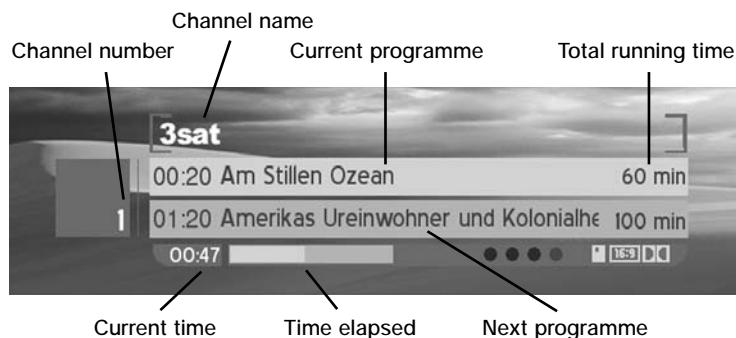

With the green option button, you can add the programme to your timer list.  
(see [8.4.11 Timer](#))

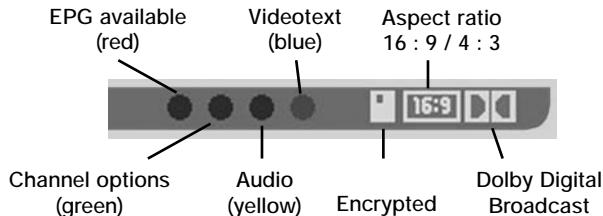

### 12. Infobar

The Info bar appears on change of programme, and shows the following data.

You can call up the Info bar at any time with the „OK“ key of your remote control.

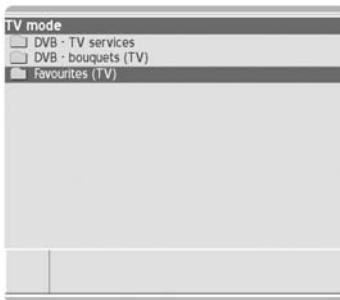

„**Encrypted**“ is highlighted in orange when the programme is being broadcast encrypted.

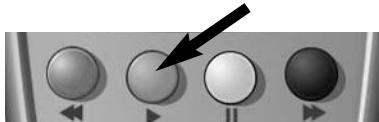

„**Aspect ratio**“ is highlighted in orange when the programme is being broadcast in 16:9 format. Otherwise it is in 4:3 format.

„**Dolby Digital Broadcast**“ is highlighted in orange when the programme is being broadcast in Dolby Digital.

### 13. Channel lists

In the channel lists you can use the green option button

to choose between different display formats of the Channel list:

- simple Channel list
- three-column Channel list
- Channel list with bouquet list

## 13. Channel lists

---

Here you can see a Channel list with a list of bouquets.

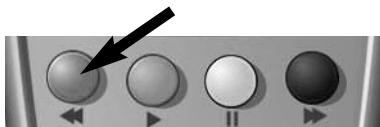

With the yellow option button on your remote control

you can switch between the left and right windows.

With the red option button on your Remote control you can access the service menu. Here you can add the channel to the favourites list or to the playlist.

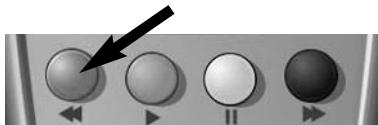

Here you see a single-column Channel list.

## **14. Standby, Power down Dreambox and Reset, 15. HDD installation instr.**

### ***14. Standby, Power down Dreambox and Reset***

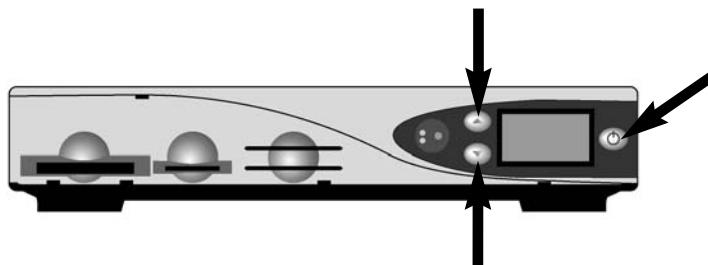

To put your Dreambox into standby mode, briefly press the power key at the top right of your remote control once.

To put your Dreambox into deep standby, go to the main menu, select the "power down" option, and confirm this with the „OK“ key.

All settings are now stored and the Box goes into deep standby, or press the power key on the remote control for 5 seconds.

For a reset, press all 3 buttons on the Dreambox at the same time.

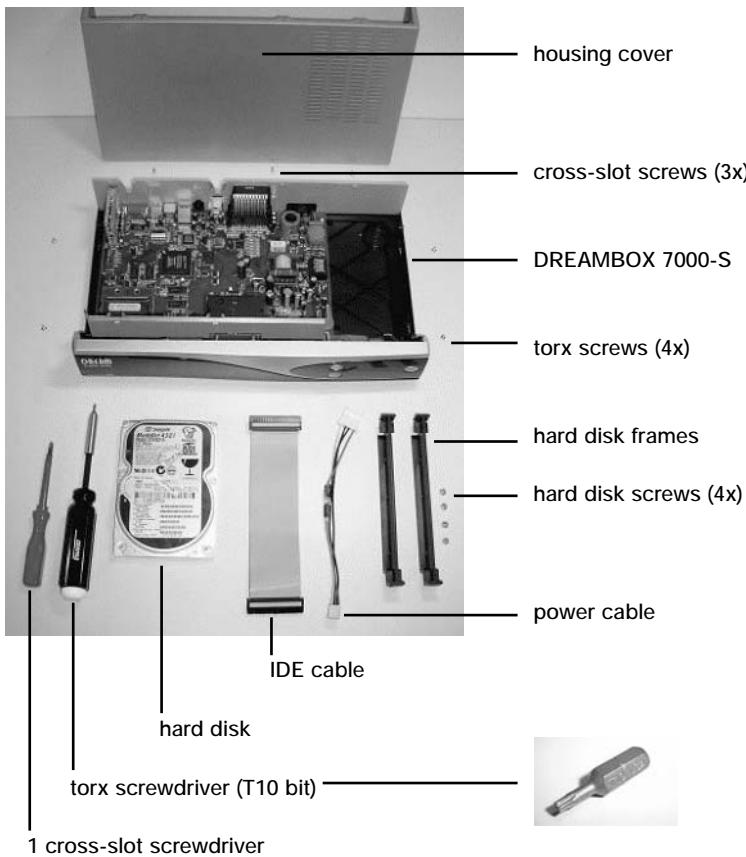

### ***15. Hard disk installation instructions***

This section describes how to install a hard disk into your Dreambox 7000.

Please be sure during this process to observe the procedures for ESD in working with electronic equipment. Make sure that you are earthed. Do not unscrew the unit in your living room or in other rooms with carpet or other floor coverings which take on an electrostatic charge. All connection cables should be disconnected from the unit. Open the unit only with the tools described here. Avoid physical contact with the components on the main circuit board. If too many questions arise, ask your nearest dealer or television technician for assistance.

Please observe the guarantee notices on page 8 of this Manual.

This picture shows the items you need for installation of the hard disk.

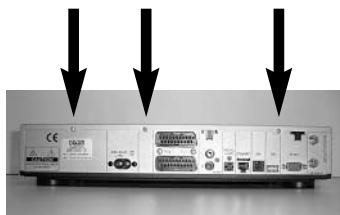

### Parts list

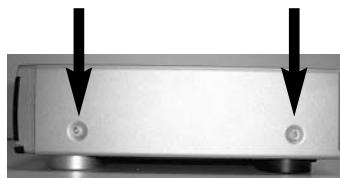

- 1 Dreambox (includes the housing cover, 4 torx screws (left, right), 3 cross-slo screws (rear))
- 1 cross-slot screwdriver
- 1 torx screwdriver (T10 bit)
- 1 hard disk (see hard disks tested at [www.dream-multimedia-tv.de](http://www.dream-multimedia-tv.de) )
- 1 IDE cable
- 1 power cable
- 2 hard disk frames (provided in the Dreambox, from works)
- 4 hard disk screws of your choice

## 15. Hard disk installation instructions

---

With the cross-slot screwdriver, unscrew the three cross-slot screws on the rear of the unit.

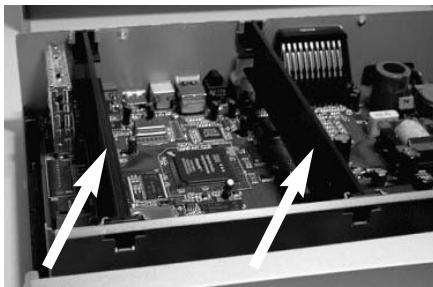

With the torx screwdriver, unscrew the two torx screws on the right-hand side of the unit.

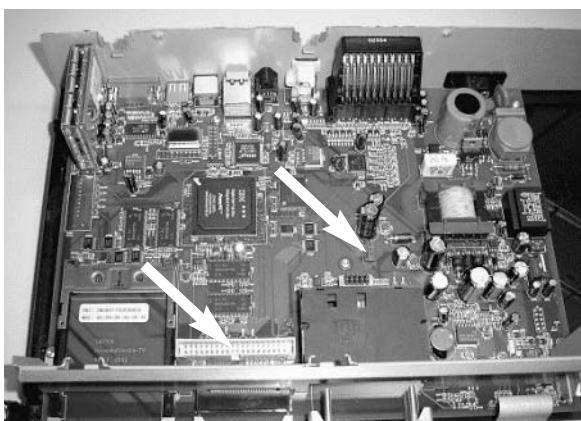

With the torx screwdriver, unscrew the two torx screws on the left-hand side of the unit.

Draw the case covering away from the unit towards the rear.

Remove the hard disk frames, extracting them upwards.

Here you see the Dreambox with the hard disk frames removed. The connections for the IDE cable and the power cable of the hard disk can be recognised.

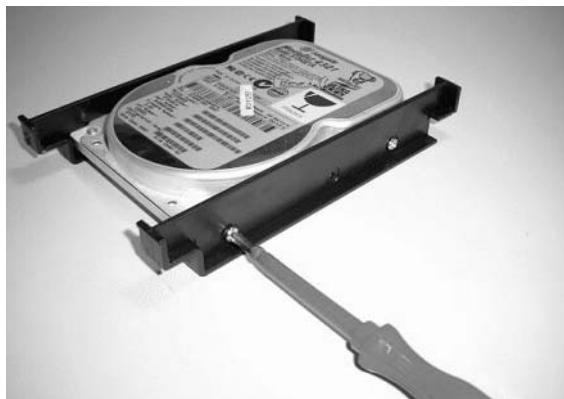

Attach the IDE cable and the power cable to your hard disk. Alternatively, you can do this after you have mounted the hard disk frames.

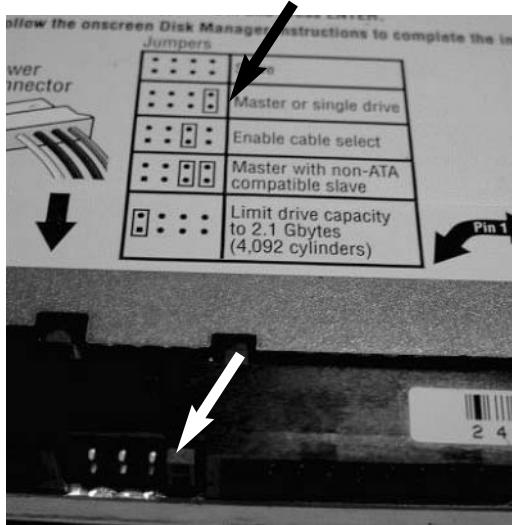

## 15. Hard disk installation instructions

---

You now need the cross-slot screwdriver, the hard disk frames, your hard disk, and the four screws of your choice.

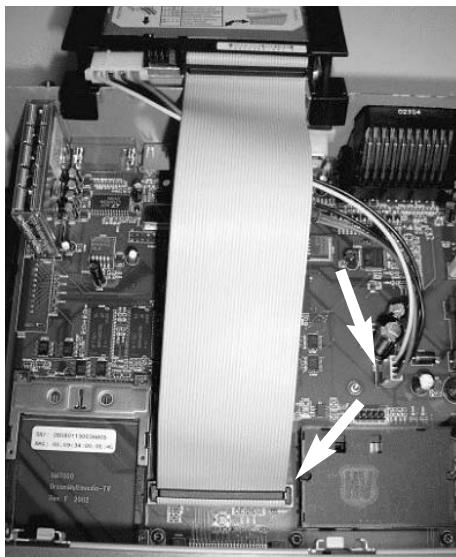

Fasten the hard disk frames to your hard disk.

Set the hard disk by jumper to master operation.

Please consult the Instruction Manual of your hard disk for information on how to set the hard disk for master operation.

Attach the IDE cable and the power cable to your Dreambox.

## 15. Hard disk installation instructions

---

Insert the hard disk into the slot in the housing frame provided for the purpose, and lead the IDE cable and the power cable through below the hard disk.

Take care to lead the cable as close as possible to the hard disk.

Slide the case covering again from the rear over the unit.

Pay attention to the small plastic clips on the front panel when you slide the case covering onto it. The plastic clips must not remain exposed.

Screw the case covering fast again with the four torx screws (left and right) and the three cross-slot screws (rear of case).

Attach the cables you need to your Dreambox. Attach the power cable last.

Format the hard disk from the OSD menu.

### **16. DreamUp – operating software update**

You can obtain the DreamUp software and the operating software from [www.dreambox.de](http://www.dreambox.de).

**!!! Please study these instructions thoroughly before you begin !!!**

In order to connect the Dreambox with your computer, you need a PC with a network card and a serial interface (COM1 or COM2), and a crossover patch cable and a null modem cable. Alternatively, you can connect the PC with the Dreambox, without a crossover patch cable, with a normal patch cable via your router, hub or switch. If you do not have a patch cable, you can also connect to the Dreambox with just a serial cable (uploads and downloads take longer). In these instructions, we assume that create a connection with the Dreambox over both interfaces, serial and Ethernet. If many questions arise, ask your dealer for assistance, or contact our technical hotline at [www.dream-multimedia-tv.de](http://www.dream-multimedia-tv.de).

**Please remove all cables from your Dreambox.  
Plug only the serial cable and the patch cable into  
your Dreambox.**

**The power cable is unplugged.**

**How to find out the IP address of your computer under Windows (W98, W2K, XP):**

Click on Start -> Run -> type in the command „Command“ -> press return.

A DOS command window will open, Type in the command „ipconfig/all“ and press return. The IP address of your computer will then be displayed.

```
Ethernetadapter "LAN-Verbindung":  
  Verbindungsspezifisches DNS-Suffix: 3Com EtherLink 10/100 PCI TX NIC <3C905B-TX>  
  Beschreibung . . . . . : 3Com EtherLink 10/100 PCI TX NIC <3C905B-TX>  
  Physische Adresse . . . . . : 00:0C:29:4D:4A:00  
  DHCP-aktiviert. . . . . : Nein  
  IP-Adresse . . . . . : 10.0.0.2 ←  
  Subnetzmaske . . . . . : 255.0.0.0  
  Standardgateway . . . . . :  
  DNS-Server. . . . . :  
  Prinzipaler WINS-Server. . . . . :
```

Note down the IP address and the subnet mask (can't do any harm).

### 16.1 DreamUp – preparing the software

Start the DreamUp software on your computer.

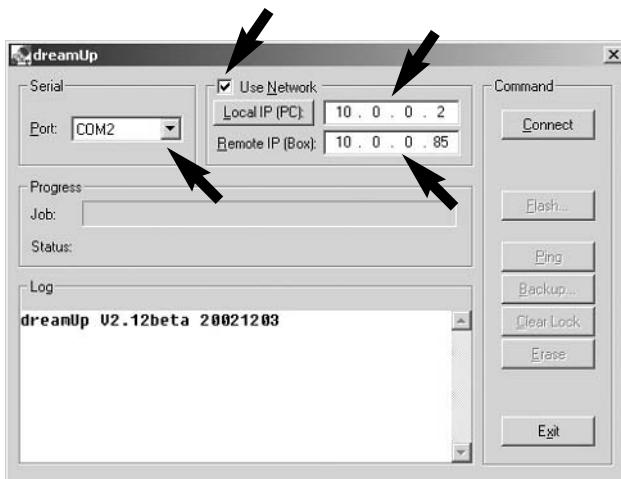

Select the COM interface which you have connected with your Dreambox.

Make sure that the checkbox “Use Network” is checked.

Enter the IP address of your computer that you noted down to the right of „Local IP (PC)“.

To the right of „Remote IP (Box)“ enter, for example, 10.0.0.85.  
This IP address is assigned to your Dreambox by the software.

Make sure that this IP address is not allocated in your home network, unless you are working with a crossover patch cable.

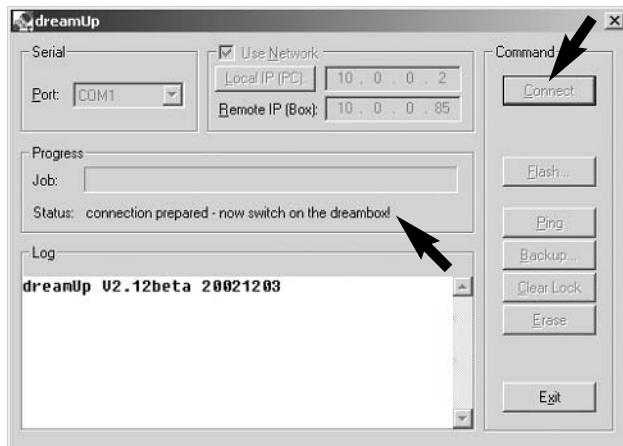

You have now configured the software to your needs.

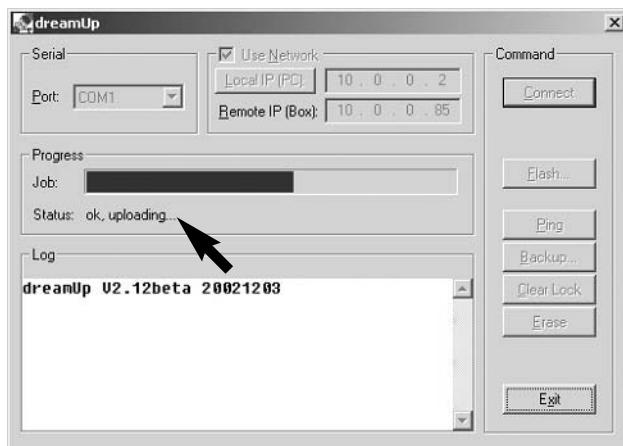

## 16. DreamUp – operating software update

### 16.2 DreamUp – establish connection

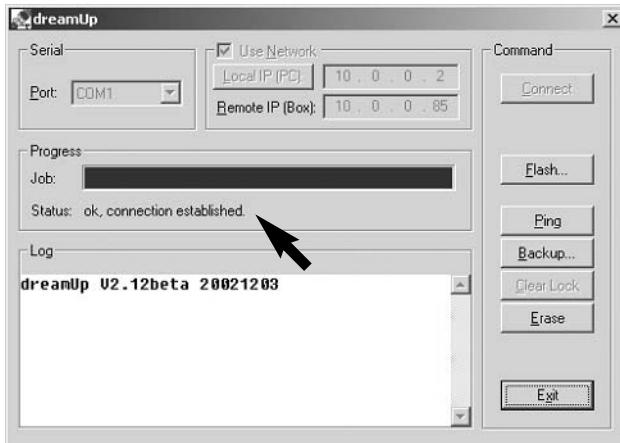

Now click on „Connect“.

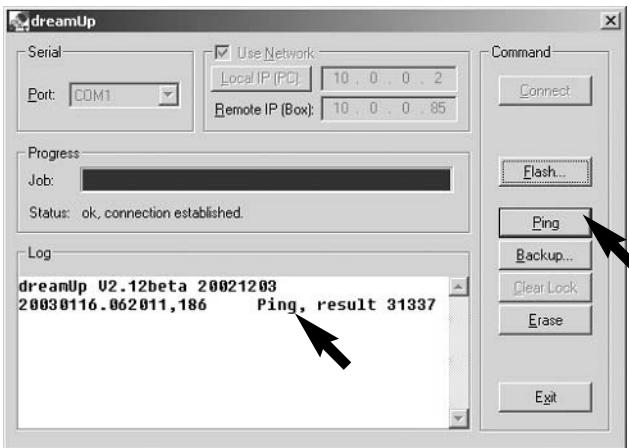

The software informs you with a status message that it is prepared for a connection. Only now should you plug the power cable into your Dreambox.

When you have supplied power to your Dreambox, the software prepares everything necessary for flashing your Dreambox. Observe the status.

This is how it looks when the software has established the connection with your Dreambox.

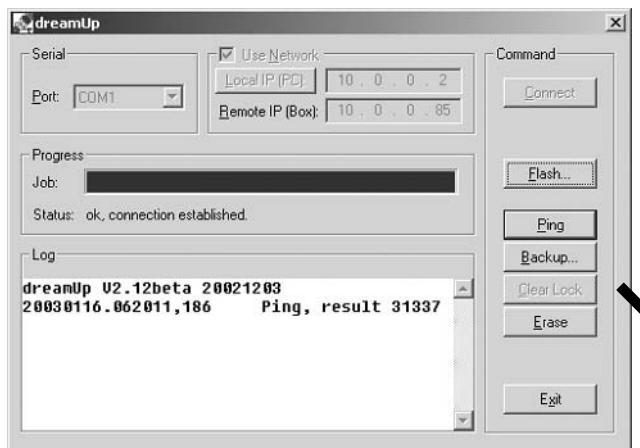

Check whether the Ethernet connection is working by clicking on „Ping“.

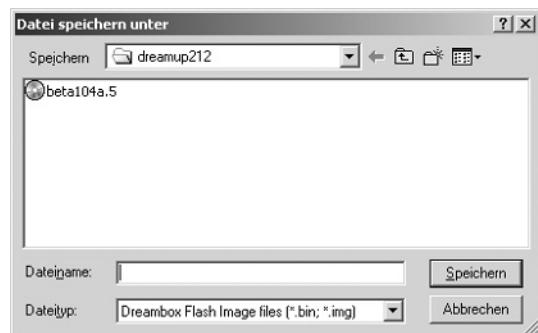

If a connection exists, a result appears. If this is not the case, check the patch cable and your network configuration.

### 16.3 DreamUp – backup funktion

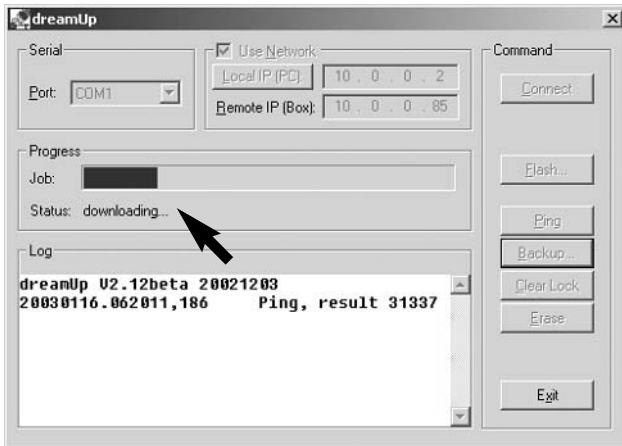

You can store the existing operating software together with the set-up of your Dreambox, by clicking on „Backup“.

After the click, the following window opens. This allows you to select a file name for the image you are going to save, and store it.

After you have clicked on „Save“, the operating software is backed up.  
Observe the status.

When the backup is complete, you will receive a message from the software, as follows.

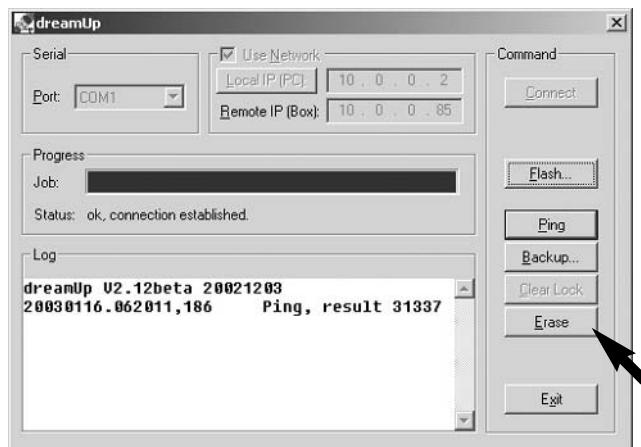

Acknowledge this message by clicking „OK“.

## 16. DreamUp – operating software update

### 16.4 DreamUp – delete operating software

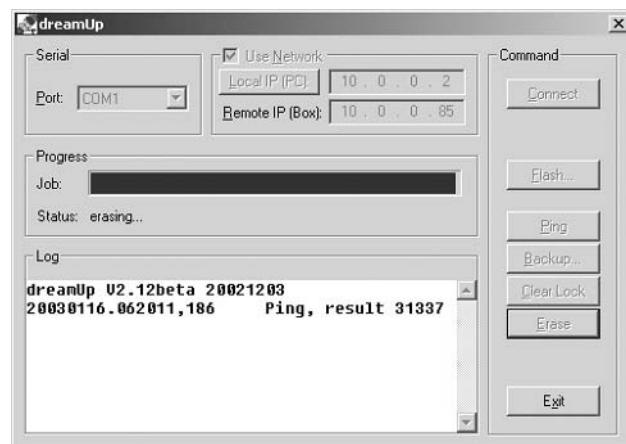

Click on „Erase“ to delete the existing operating software (image).  
(This is no MUST)

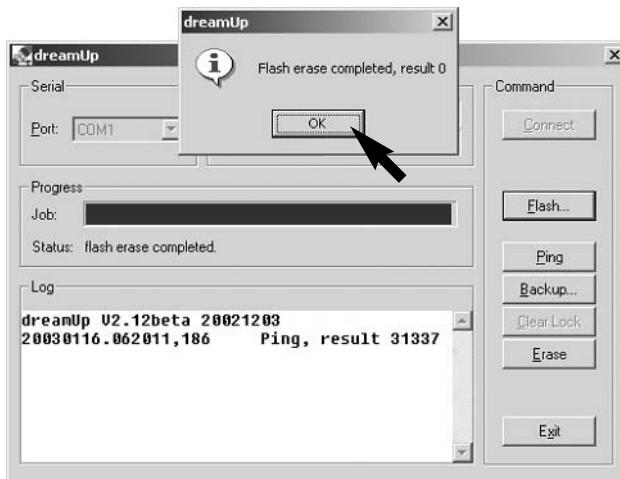

A request for confirmation will appear, which you answer with a click on „Yes“.

Observe the status.

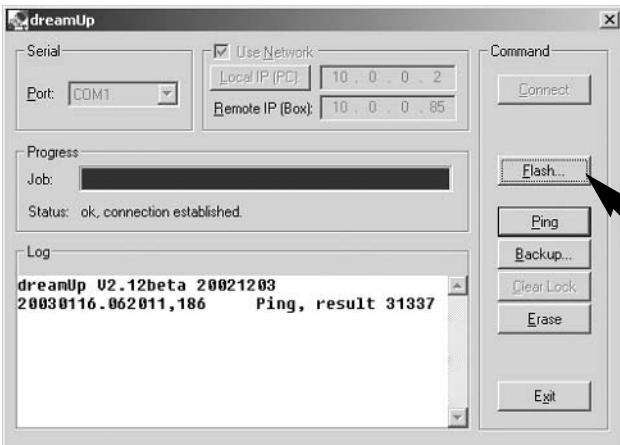

Here you see the message that the erase has been successfully completed.

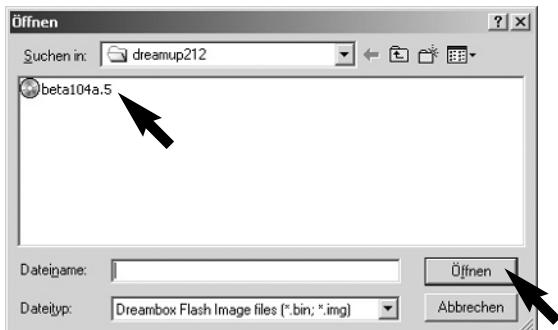

Click on „OK“.

### 16.5 DreamUp – flash operating software

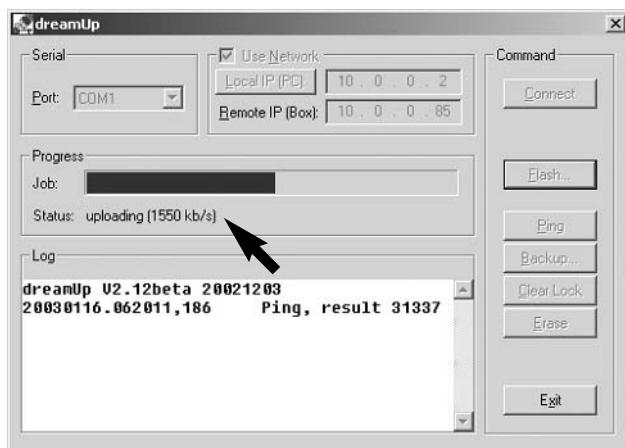

Click on „Flash“. You will now be asked for the operating software (image) which you want to record.

## 16. DreamUp – operating software update

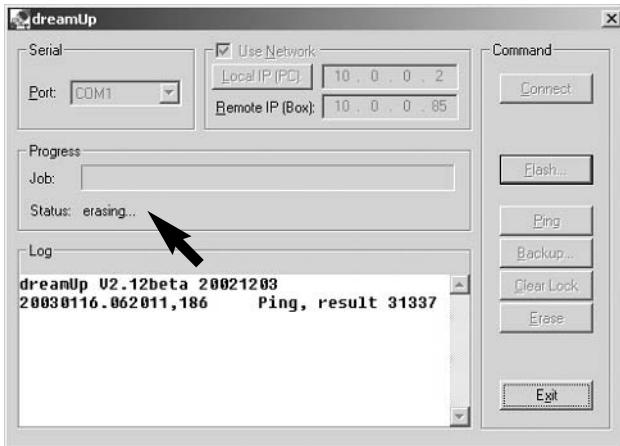

Select your image and click on „Open“.

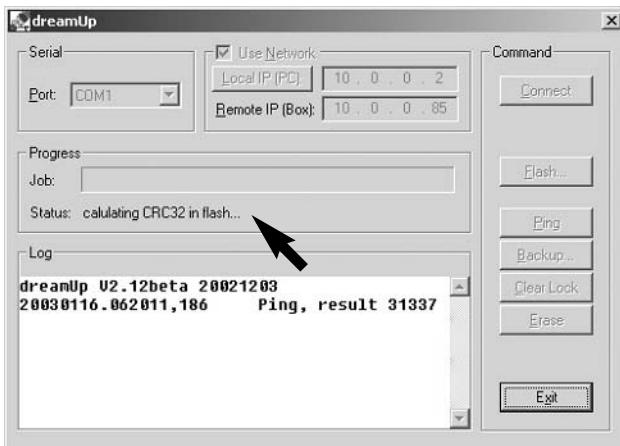

The operating software will then be uploaded to your Dreambox.  
Observe the status.

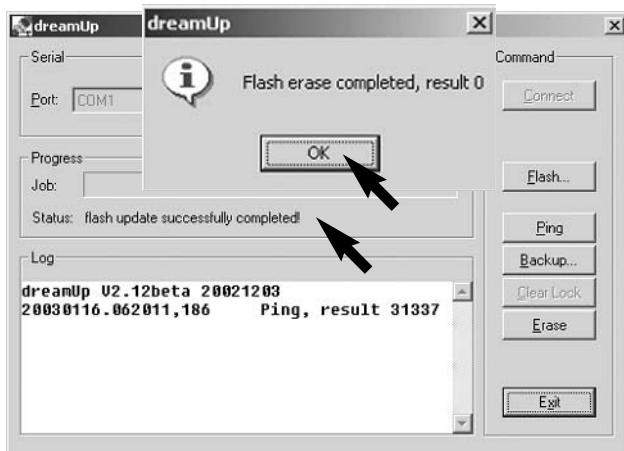

When the upload is complete, the flash of your Dreambox will be erased.  
Observe the status.

The uploaded image will be checked.  
Observe the status.

After the flashing is complete, you will receive a message from the software that everything has been completed successfully. Click on „OK“.

### 16.6 Reset Dreambox to factory settings

Your Dreambox is now updated with the selected operating software.

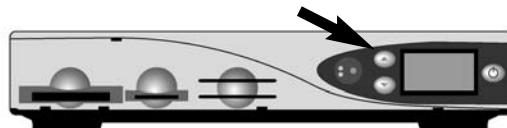

Close the program by clicking on „Exit“.

Remove the power cable, the patch cable and the serial cable from your Dreambox.

Wait 20 seconds.

Plug the TV Scart plug and the coaxial cable (satellite system) into your Dreambox. Plug the power cable into your Dreambox.

As soon as the Dream logo appears on your TV, press and hold down the upper left key on your Dreambox, and do not release it until „flash erase“ appears in the display of your Dreambox.

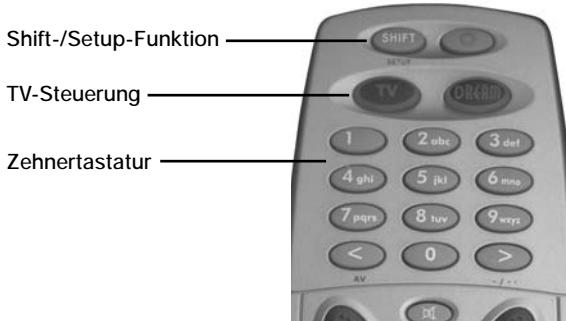

Your Dreambox then resets itself, and returns to the TV broadcaster „ARD“.

## 17. Set-up TV control

A four-digit TV device code is selected from the TV model list in the table in Chapter 18 and entered.

**TV mode -> <<Set-up>> -> number -> number -> number -> number**

### 4.1 Programming sequence

1. Briefly press the TV key once.
  2. Press SHIFT/setup key for 3 seconds the TV key should blink twice.
  3. Enter the TV code with the numeric keypad on the remote control.  
Each number input is acknowledged by the TV key blinking once.
- After the fourth digit has been input, a valid code is acknowledged by the TV key blinking twice.
4. The remote control then automatically leaves programming mode.
  5. If no code is input for 10 seconds, the remote control automatically leaves programming mode.

## 18. TV model list

---

### 19. Technical Data

- 250 MHz IBM PowerPC Processor (350 Mips)
- Linux open source (most parts under GPL)
- supports Linux Standard API (Direct-FB, Linux-FB, LIRC)
- 1 x DVB Common Interface slot
- 2 x Smartcard-Reader
- Integrated compact Flash reader (front slot) for e.g. camera memory cards
- MPEG2 hardware decoding (DVB compatible)
- future support for MPEG4 decoding
- Tuner variant NIMs (DVB-S, DVB-T, DVB-C)
- 100 MBit full duplex Ethernet Interface
- USB port 1.2, keyboard, mouse, webcams (not yet) and other devices
- V.24/RS232 connection
- large area LCD display
- 64 MByte RAM (working storage)
- built-in IDE UDMA66 Master/Slave connection
- hard disk for all common sizes
- unlimited channel list for TV/Radio
- change of channel in less than one second
- fully automated channel search
- support for bouquet lists (indirect unlimited)
- EPG support (electronic program guide)
- Videotext support
- applications such as Web browser or mail clients
- support for multiple LNB switching (DiSEqC)
- adaptable OSD in many languages (skin support)
- SPDI/F optical connection AC-3 / DTS
- 2 x Scart connections (completely software controlled)
- MINI-DIN: connection for external IR (send/receive) and I2C for external rotor control
- internal send/receive diodes (video recorder)

#### **DBS-Tuner:**

Input frequency range 950 .... 2150 MHz

Input level range - 65 dBm .... - 25 dBm

noise figure 12 dB max.

DBS tuner input F socket

input impedance 75 Ohms

AFC capture range +/- 3 MHz

Demodulation shaped QPSK

Symbol rate 2 .... 45 Mbaud/s, SCPC / MCPC

FEC Viterbi and Reed-Solomon

Viterbi rates 1/2, 2/3, 3/4, 5/6, 7/8, automatic adjustment

Roll-off factor 35 %

Demultiplexing according to ISO 13818-1

Common Interface power consumption max. 0,3A/5V

**Video decoding:**

Videocompression MPEG-2 and MPEG-1 compatible

Video standard PAL G/ 25 Hz

Picture format 4:3 / 16:9

Picture material 16:9, automatic adjustment for 16:9 TV equipment (via Scart)

Letterbox filtering for 4:3 TV equipment

**Audio coding:**

Audio compression MPEG-1 & MPEG-2 Layer I and II

Audio Mode Dual (main/sub), stereo

Sampling frequencies 32 kHz, 44.1 kHz, 48 kHz, 16 kHz, 22.05 kHz, 24 kHz

**Analog output:**

output level L/R 0.5 Vss to 600 Ohms

THD > 60 dB (1 KHz)

Crosstalk < -65 dB

**Digital output:**

output level 0.5 Vss to 75 Ohms

sampling frequencies 32 kHz, 44.1 kHz, 48 kHz

S/PDIF output optical (AC3)

**Video parameters:**

input level FBAS 1 Vss +/- 0.3 dB into 75 Ohm

Teletext filtering according to ETS 300 472 standard

**TV Scart:**

Output: FBAS,RGB,S-VHS over OSD selectable

**VCR Scart:**

Input: FBAS,RGB,S-VHS

Output: FBAS,S-VHS

**RS 232 serial interface:**

Type RS232 bi-directional

Bitrate 115.2 kBit/s max.

Connector SUB-D-9 socket

Function update of the operating software and pre-programming

**Ethernet:**

100 MBit bi-directional

Function update of the operating software and pre-programming

**USB:**

USB 1.2 connection

**Mini-Din:**

I2C for control of external devices (Option rotor control)

IR functions send / receive

**UDMA66 IDE interface:**

Internal, for connection of HDD max. 500mA

various sizes

Compact Flash reader

**LNB power supply:**

LNB power 500mA max. ; short-circuit proof

LNB voltage vertical < 14V without load, > 11,5V at 400mA

LNB voltage horizontal < 20V without load, > 17,3V at 400mA

LNB switch-off in standby mode

**Number of active satellite positions:**

DiSEqC 1.0/1.2 SAT POSITION / SAT OPTION

DiSEqC – Rotor control

**Power consumption:**

< 20W (in operation, horizontal polarisation / 400mA LNB power)

< 11W (in operation, without LNB)

< 2W (deep standby mode)

**Input voltage:**

180V... 250V / 50Hz AC voltage +/- 15%

**General:**

Environmental temperature +15°C...+15°C

Atmospheric humidity < 80%

Dimensions (W x D x H): 374 mm x 230 mm x 63 mm

Weight: 1.8 kg without HDD

**20. Glossary of terms****AC3**

Dolby Digital, sound system

**AGC**

Automatic Gain Control. . This always provides the best picture quality. It does not, however, guarantee a perfect picture, as the AGC is dependent on the input signal. The poorer the input signal, the less the AGC can manage.

**Analog**

An ordinary signal transmission procedure, where the fluctuations of the signal exactly correspond to the sound and picture waveforms of the source.

**Aspect ratio**

Ratio of lengths of picture sides, e.g. 4:3 or 16:9

**Bouquets**

A bouquet is (like a bouquet of flowers) a package of programmes from a single Pay-TV provider.

**CA**

Conditional Access. Control the user's access to services and programmes which are encrypted for copyright or commercial reasons.

**CI**

Common Interface - Conditional Access Module. The basic idea of the Common Interface (CI) is as follows. There is a uniform, standard interface for the many television and radio programmes, Internet and software products for which charges are levied.. To enable you to receive encrypted programmes with the satellite receivers Irdeto, Cryptoworks, Conax, Nagravision, Viaccess, this is equipped for the age of Common Interface. Of course, all Common Interface options are available to you with the multi-access modules for the sat-receivers with CI. Pay-TV programmes are normally encrypted; the screen is black, and there is no sound. After the subscription fees or a one-time charge for the smartcard have been paid, the associated TV offerings can be seen decrypted. The CI-CA module compares the code in the box with the one broadcast. If they match, the relevant programmes are decrypted and thus become visible. There are CI-CA modules for different encryption systems (Cryptoworks, Conax, Nagravision, Viaccess and soon also from Irdeto). In order to watch Pay-TV programmes, as well as the CI-CA modules, you need a Sat-Receiver with Common Interface, a multi-access module with a CI slot and the corresponding smartcard from the programme supplier.

**Coding systems**

see Encryption systems.

### **CF**

Compact Flash. Standard for a storage medium (memory card) with Flash memory which retains information even without power. CF is a scaled-down, minimally altered version of PCMCIA memory cards with the ATA interface. This makes it possible to operate them over a simple PCMCIA adapter without controller logic. The cards come in three variants (I, II and III), according to their thickness. However, most devices prefer type I.

### **DAB**

Digital Audio Broadcasting. The system offers additional capacity for data transmission, Data compression is by MPEG-2.

### **Data reduction**

Compression of picture and sound signals. Redundant information is omitted.

### **Digital**

The signal transmission method of the future. Signals are transformed into binary code (0's and 1's) and broadcast in this form. See, by contrast, Analog. The latest digital satellite receivers implement the future in this way.

### **DiSEqC**

Digital Satellite Equipment Control (pronounced: die-sec). Developed by Philips for Eutelsat. Anyone who wants to receive analog and digital programs from Astra, Eutelsat, and potentially other satellites cannot avoid DiSEqC. The set-top box delivers control signals in digital form with which multiple antennae can be selected. In contrast to previous analog control signals (14 / 18 volt and 22 kHz), the DiSEqC system provides a much larger number of switching possibilities for control and monitoring of the equipment components of a receiving set-up. DiSEqC is a trademark of the European Satellite Organization (EUTELSAT).

### **Dolby Digital 5.1**

Dolby Digital is a sound transmission system which makes it possible to reproduce digital surround sound on a home cinema system.

### **Downlink**

The transmission segment from the satellite to the receiving antenna on the ground is described as the downlink. Television broadcasters often use satellite transmission from the filming location to the broadcasting station. The advantage: It is the quickest way to transport large data volumes over long distances.

### **DTS**

Digital Theatre System, sound system

**DVB - S / T / C**

Digital Video Broadcasting. Transmission of video and sound signals in digital form. DVB-S indicates satellite transmission, DVB-T terrestrial transmission and DVB-C cable transmission. A project initiated in Europe which promotes standardisation of satellite, terrestrial and cable transmission of digital television signals. Numerous organisations and institutions participate in the DVB project, now including many from countries outside Europe. Digital receivers which are developed and manufactured in accordance with the DVB standards can be identified by bearing the DVB logo. Digital satellite receivers of course bear this logo.

**DVD**

Digital Versatile Disc.

**EPG**

Electronic Programme Guide. The electronic programme guide shows you information on the broadcast selected.

**Gateway**

Entrance, gate. This is a computer which links two networks together. In the more precise sense, it refers to connections between two different online systems, e.g. CompuServe and the Internet, or between mailbox networks (Fido, Maus ...) and the Internet.

**I<sup>2</sup>C**

The 2 should be a superscript (I squared). A bus which was developed by Philips at the end of the 70's for entertainment electronics. It was used as the basis for the System Management Bus (SMB) and Display Data Channel (DDC).

**IDE**

Integrated Drive Electronics. Type of hard disk in which the electronics for controlling the mechanism etc. is integrated in the disk drive itself, and the controller thus does not need to be involved in this, as previously with the AT. It is rather primitive in comparison with SCSI, but also (somewhat) cheaper, and has therefore become established.

**IP**

Internet Protocol. Level 3 protocol in the TCP/IP communications standard. It mediates data packets in "insecure" mode. The Internet is based on this protocol.

**IR**

Infrared. A wavelength which lies below that of visible light. It is used for data transmission, e.g. for very small computers (PDAs) and for remote control units.

**LCD**

Liquid Crystal Display is a technology which is used in notebooks and other computers for presenting images and symbols. In contrast to LED (Light Emitting Diode) and gas plasma technologies, LCD allows a much higher resolution than cathode ray tube technology (CRT).

**LNB /LNC**

Low Noise Blockconverter / Low Noise Converter (feed system). Converts the downlink satellite frequencies to 1.Sat-ZF. Receiver component on or in the satellite antenna, which receives the high frequencies of the satellites, amplifies them, and converts them to the lower medium frequency.

**LOF**

Fixed frequency around which the high input frequency of the satellite signal is translated (L.O.F. = Local Oscillator Frequency).

**MCPC**

Multiple Channel Per Carrier. Transmission system which uses a single transponder for multiple channels. (see also SCPC).

**MHz**

Megahertz. Number of oscillations of a signal per second. Unit: Hertz. One kilohertz (kHz) corresponds to a thousand oscillations per second, one megahertz (MHz) to a million oscillations per second, and one gigahertz (GHz) to a billion oscillations per second.

**Mini-DiSEqC**

Two universal single LNBs, for digital and analog, reception can be controlled with the help of the „Tone-Burst“ analog switching signal (also known as Mini-DiSEqC). 14/18 volts and 22 kHz are then controlled over a special DiSEqC multi-switch.

**MIPS**

Millions of Instructions Per Second. Measurement of millions of machine instructions carried out per second. Wags say it stands for „Misleading Interpretation of Processor Speed“. Also a company of this name which produces processors and other chips (in RISC architecture).

**MPEG2**

Data reduction method for picture and sound. In contrast to the analog method (where 25 full pictures with all information are transmitted per second) the MPEG method only takes account of the actual changes in the picture.

**NVoD**

Near Video on Demand. The same film is transmitted on different channels at certain time intervals, such as quarter hour, half hour or hour.

**OSD**

On Screen Display. When operating the receiver, the functions are displayed as an on-screen menu, blended into the television picture. The OSD of most satellite receivers offers various languages for its on-screen menu.

**PCMCIA**

Abbreviation for Personal Computer Memory Card International Association, a standard.

**PCR**

Program Clock Reference, a time marker is set at least every 100 milliseconds for each signal transported in the transport stream, in order to synchronise the system time of the decoder.

**PID**

Packet Identification. This means that individual packages received in the transport stream must be identified. The identification is a four-digit code, separated by audio and video. Thus, for example, over-writing of SCPS signals is prevented.

**PPV**

Pay per view. This allows subscribers to a bouquet to book individual films or other transmissions.

**QPSK / QAM**

Quadrature Phase Shift Keying is a modulation method for digital television programmes received via satellite. In cable networks, different demands are placed on the transmission of digital signals. A different modulation process is therefore required, "Quadrature Amplitude Modulation" (QAM). Since a set-top box can only command one of the two procedures, it is necessary to know the route by which digital television programmes are to be received.

**RGB**

Red, Green, Blue. Colour model in which the colour is defined by the proportions of red, green and blue. Other colour models: CMY, HSV, HLS. Also the name for a particular monitor signal, since monitors have electron beams for red, green and blue, and can thus be directly controlled.

**RS232**

A widely used interface between computers and other serial devices such as modems, printers and mice. Software updates can be fed in over the RS232 connection (for Windows computers, the COM interface).

**Scart**

21-pole cable connection for picture and sound transmission, for example from the satellite receiver or video recorder to the television. The usual connection between television and video recorder, it is also used to connect the set-top box with both of these units. Picture and sound can be placed back and recorded in this way.

**Smartcard**

Similar to a credit card, used with the CA module of the set-top box, it makes possible participant identification and access control for an encrypted Pay-TV or TV channel.

**SNR**

Signal to Noise Ratio. The difference between the signal level and the noise on an information channel..

**SCPC**

Single Channel Per Carrier – transmission system (digital or analog) which uses a separate carrier for each channel on a transponder (see also MCPC).

**S/PDIF**

Sony/Philips Digital Interface Format. Definition of an interface and a protocol for digital audio data, used in consumer equipment.

**Symbolrate**

Parameter for digital reception. Represents the data transmission rate for an MCPC or SCPC signal, and is stated in Megasymbols per second (MS/s). The symbol rate represents the speed with which data is transmitted. The receiver must synchronise itself to this speed. MCPC channels usually operate with a symbol rate of 27,500, and SCPC channels with symbol rates between 4,000 and 7,000.

**Transponder**

Satellite transponder/channel with defined frequency bandwidth. In analog technology, one TV programme and a number of sound channels can be transmitted per transponder. In digital technology (QPSK), the transmission capacity is 6-10 TV programmes with sound channels.

**UDMA**

Ultra Direct Memory Access. A technology for IDE disk drives, which offers twice the speed of the EIDE transmission mode.

**USB**

Universal Serial Bus. An open, public domain, plug-and-play capable serial bus for connecting devices which operate at up to 12 Mbits/second, and also for slower devices such as keyboard, mouse and monitor. Developed by Intel with Microsoft, IBM, Compaq, DEC, NEC and Northern Telecom. It has only one type of plug, allows connection of up to 127 devices, asynchronous and isochronous (precisely times) data transfer, flexible data packets, and connection while running (Hotplug).

**Encryption systems**

1. Seca: The encryption system developed by the company Société Européenne de Contrôle d'Accès (Seca) for Canal plus was first used in France for the Canal numérique package.
2. Irdeto: Dutch producer of the encryption system of the same name for digital Pay TV, currently used in Italy, Greece, and the Benelux countries as well as in many other countries. Irdeto now belongs to the Mindport group.
3. Viaccess: The encryption developed by France Telecom, is used principally for the French packages AB-Sat and TPS (both on Eutelsat 13 degrees east). It is, however, also used by SRG for encryption of its digital SAT programme range (restriction of the technical coverage for licensing reasons).
4. Cryptoworks: A CA system developed by Philips.
5. Nagra: With Seca (Canal+) the second digital coding method used in Spain. The programme package Via Digital on Hispasat (30 degrees west) is coded in Nagra, as are Pay TV programmes in the cable network of the Spanish Telefonica.
6. Conax: since the reorganisation of the Pay TV providers in Scandinavia, the general coding standard for the Scandinavian Telenor. The satellite receivers, with Common Interface, are thus ready for the digital age. Already, almost all

manufacturers offer the technology of tomorrow. Here, everyone can decide for himself when the receiver should be outfitted with various encryptions. The greatest flexibility is achieved with the multi-access modules from various manufacturers. Here, there is the option of one or two Common Interface slots. They can also be added later, without difficulty. The multi-access modules provide the greatest possible security that they will in the future continue to reign supreme in the world of encrypted digital programmes.

### **VoD**

Video on Demand. In contrast to Pay TV, where a subscription is taken out for a complete programme, here only individual broadcasts and films are ordered and paid for. Until now, it was necessary to go the video store in order to find your favourite film from a wide range. Video on demand offers this selection at home and over the television. The film selected is received with the set-top box.

### **VCR**

Video Cassette Recorder (Video recorder)

### **ZF**

Satellite intermediate frequency = output frequency range of the LNC, e.g. 950 to 1050 MHz. Created by mixing the satellite reception frequency with the oscillator frequency (L.O.F.)

Brand names here are protected by copyright and are the property of the respective name-bearers.

# Garantieschein, Warranty card, Carte de garantie

## WICHTIG!

Bei Reklamationen, Garantiefällen u.Ä. das Gerät bitte zu dem Händler schicken/geben, bei dem es erworben wurde. NICHT AN DREAM MULTIMEDIA TV GMBH SCHICKEN!  
Falls Ihre DREAMBOX mit einer HDD nachgerüstet wurde, legen Sie bitte unbedingt den ausgefüllten und gestempelten EINBAUSCHEIN HDD dem GARANTIESCHEIN bei!

## IMPORTANT!

In case of complaints or warranty claims, please return the unit to the dealer from whom it was purchased. DO NOT RETURN IT TO DREAM MULTIMEDIA TV GMBH!

If your Dreambox has been equipped with a HDD, it is most important that you include the HDD installation card, filled in and stamped, with the warranty card!

## IMPORTANT!

En cas de réclamations, de revendication de prestations de garantie et autres semblables, veuillez expédier/remettre l'appareil au revendeur chez qui vous l'avez acheté.

PRIERE DE NE PAS L'EXPEDIER A DREAM MULTIMEDIA TV GMBH!

Si votre DREAMBOX a été ultérieurement dotée d'un disque dur (HDD), veuillez impérativement joindre la CARTE DE MONTAGE HDD remplie et cachetée à la CARTE DE GARANTIE!
