# AC-Input Power Supply Features

There are two versions of the 750 W AC-input power supply, the C4KX-PWR-750AC-F power supply which has back-to-front airflow (the release lever is color-coded blue indicating cool side) and the C4KX-PWR-750AC-R power supply which has front-to-back airflow (the release lever is color-coded burgundy indicating warm side). Both power supplies provide 750 W of power. [Figure 1](#) shows the AC-input power supply and identifies the major features.

**Figure 1**      **750 W AC-Input Power Supply Features**

<b>1</b>	FAIL LED (amber)	<b>5</b>	AC power cord receptacle (IEC 60320 C15)
<b>2</b>	OK LED (green)	<b>6</b>	Fan (directional arrow on top indicates airflow direction)
<b>3</b>	Power supply handle	<b>7</b>	Release lever (color-coded for airflow direction. Burgundy indicates front-to-back airflow; blue indicates back-to-front airflow)
<b>4</b>	AC power cord retaining strap (velcro)	<b>8</b>	Retention clip

The AC power supply has two LEDS mounted on the lower left corner of the power supply front panel. (See [Figure 1](#).) Together, the two LEDs provide the status of the power supply. [Table 1](#) lists the meanings of the LEDs.

**Table 1      AC-Input Power Supply Status LEDs Meanings**

OK LED (Green)	FAIL LED (Amber)	Description
Off	Off	No source AC power is detected by the power supply.
Off	On	Power supply failure (can include overvoltage, overcurrent, overtemperature, or fan failure).
Off	Blinking	Power supply warning situation where the power supply continues to operate (possible scenarios include high temperature, overvoltage, or slow fan).
Blinking	Off	Source AC is present. The 3.3 VDCsb (standby) is present. The power supply 12 VDC off.
On	Off	Power supply is ON and is functioning normally.

**Note**

Two LEDs labeled, PS1 and PS2, are located on the chassis front panel. The LEDs indicate the status of their respective power supplies: Green indicates OK and red indicates a fault (either voltage out of tolerance or fan failure) in the power supply.

## Tools Required

No specific tools are required to install or remove the AC-input power supply.

## Installing the Power Supply

To install the AC-input power supply, follow these steps:

- Step 1** Remove the power supply from the shipping packaging and discard the packaging.
- Step 2** Verify that the new power supply has the correct airflow direction (front-to-back or back-to-front) for your situation. The power supply release lever (see [Figure 1](#)), is color-coded blue for back-to-front airflow or burgundy for front-to-back airflow.

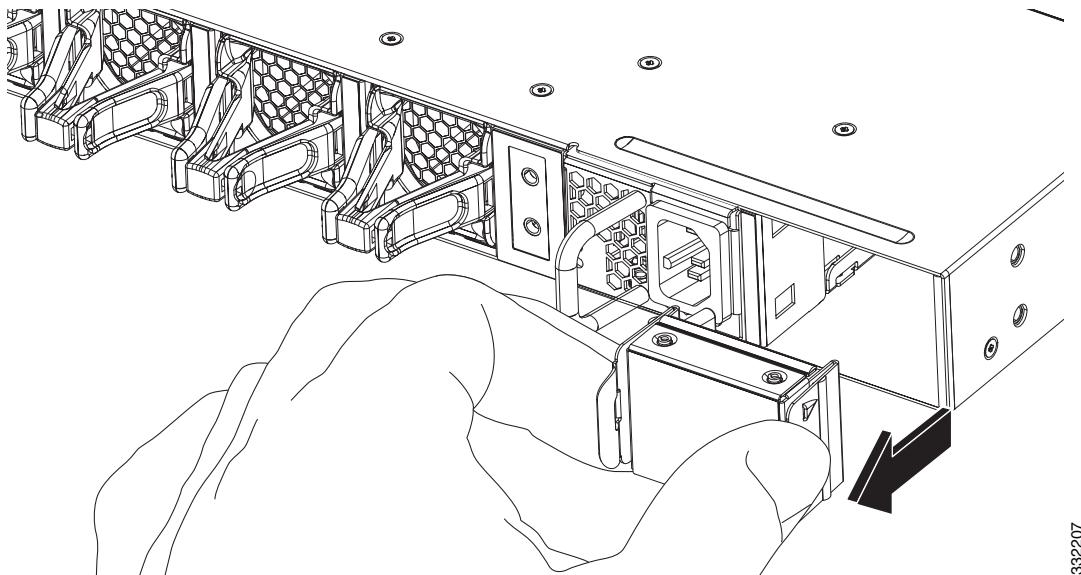

**Note**

The chassis determines which airflow direction is correct by polling all of the fan assemblies and the power supplies. The airflow direction for all of the devices must be the same. If the airflow direction of the replacement power supply or the redundant power supply does not match the fan assemblies airflow direction, the system software shuts down the power supply and generates a power supply mismatch error message on the console.

**Step 3** If the chassis power supply bay is empty, proceed to Step 4. If you are replacing a power supply already installed in the chassis power supply bay, go to the “[Removing the Power Supply](#)” section on page 11. If the chassis power supply bay is empty, but has a power supply blank cover installed, you must remove the blank cover (see [Figure 2](#)):

- a. Grasp the two retaining clips with your thumb and forefinger and squeeze to release the blank cover from the power supply bay.
- b. While still squeezing the two clips, pull on them to remove the blank cover from the power supply bay.

**Figure 2** *Power Supply Blank Cover*

**Note**

If the redundant power supply bay on the Catalyst 4500-X chassis is unused, you must cover it with a power supply blank cover (part no. C4KX-PWR-BLANK=) to maintain proper airflow through the chassis.

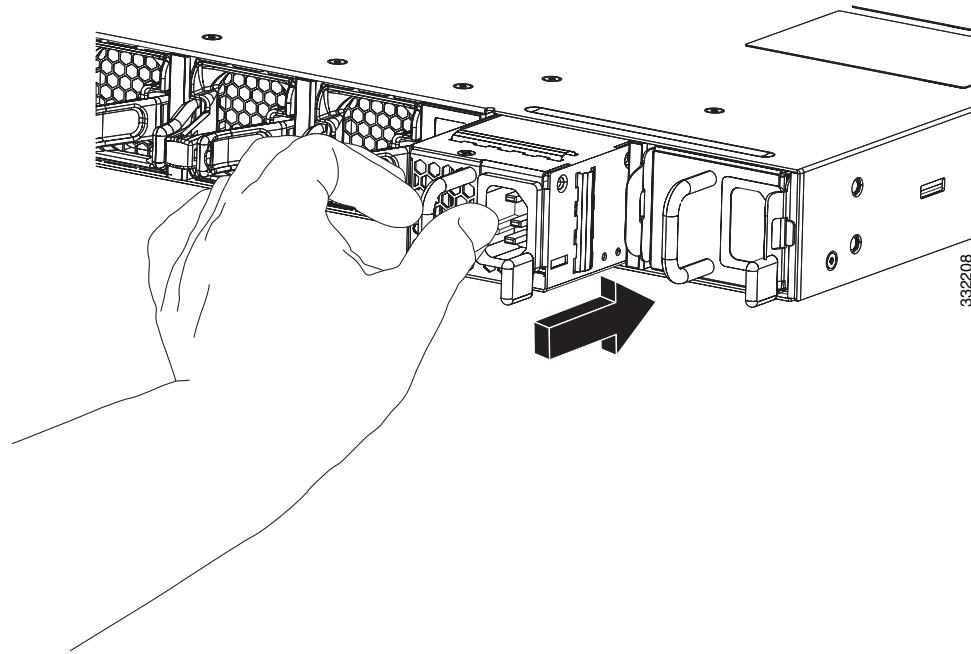

**Step 4** Using two hands to support the new power supply, position it in front of the power supply bay and slide it into the bay.

**Step 5** Firmly push on the power supply handle to fully seat the power supply in the bay. (See [Figure 3](#).)

**Note**

The retaining clip will pivot in and then snap into place when the power supply is fully installed in the bay. You can hear a click as the power supply release lever snaps into place.

**Figure 3** *Installing the AC-Input Power Supply*

- Step 6** Verify that you have the correct source AC power cord for your installation. See the “[Power Cords](#)” section on page 14 for a list, including descriptions and illustrations, of the AC power cords supported on the power supply.
- Step 7** Attach the AC power cord’s appliance connector to the AC-in receptacle on the power supply and secure the power cord in place with the velcro retaining strap on the power supply. Connect the power cord’s AC plug to the source AC outlet.

**Note** If the source AC outlet is live, the power supply will immediately power up. There is no power switch on the AC-input power supply.

- Step 8** Verify that the power supply powers up correctly by visually monitoring the two LEDs on the power supply. (See [Figure 1](#).) See [Table 1](#) for a list of LED conditions and meanings.

## Removing the Power Supply

To remove the AC-input power supply from the chassis, follow these steps:

- 
- Step 1** Release the AC power cord from the velcro restraint strap.
- Step 2** Disconnect the AC power cord from the power supply.

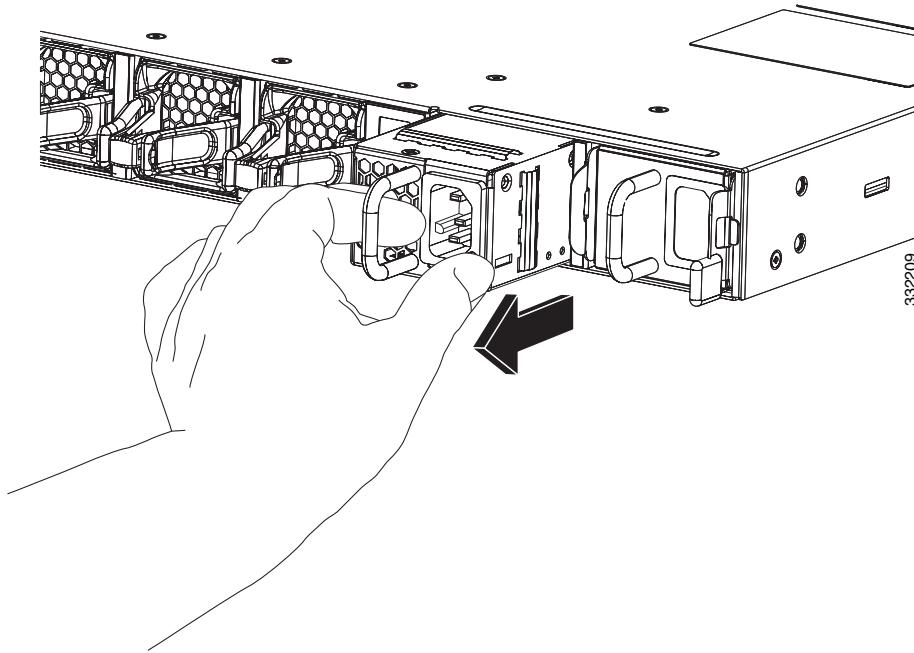

**Note** The AC-input power supply does not have an on/off switch. Disconnecting the AC power cord immediately powers down the AC power supply.

**Step 3** Grasp the power supply handle with your forefinger and place your thumb on the power supply release handle.

**Step 4** Squeeze your forefinger and thumb together and pull on the power supply handle to release the power supply from the chassis bay. (See [Figure 4](#).)

**Figure 4** *Removing the AC-Input Power Supply*

**Step 5** Slide the power supply out of the chassis bay.

**Note** The power supply is approximately 14 inches (35.56 cm) long. Place your other hand underneath of the power supply to support the power supply as you extract it from the chassis.

**Step 6** Set the removed power supply aside.

**Step 7** If you are not going to replace the power supply, place a power supply blank cover (part no. C4KX-PWR-BLANK=) over the empty power supply bay opening and snap it into place. If you are going to install a new power supply in the chassis, see the “[Installing the Power Supply](#)” section on [page 9](#) for instructions.
