Console Protection Guarantee

Console Protection
GUARANTEE

Pelican's Console Protection Guarantee assures you of Pelican's commitment to quality and customer satisfaction. The Protection Guarantee warrants the connection (the plug port of the video game console and the plug of the Pelican controller) between the controller and your video game console system., i.e., that with the proper use of our controller (see manual) we agree to replace or repair your video game system in the event that our controller directly causes damage to your game console as a result of our controller failing to perform properly. Circumstances that may cause our protection guarantee to take effect might be one of the following: the video game console does not acknowledge a controller which has been plugged in, original controller fails to operate after using a Pelican controller, other non-pad controllers fail to operate after using a Pelican Controller. This protection warranty does not include the video game power supply, any part relating to the CD/DVD load and read mechanism, internal operating system, nor the cabinet of the video game system. This warranty will not apply if the Pelican controller is not used as directed in the product manual enclosed. For further information or help please contact us toll free at (800) 331-3844 or on line at <http://www.pelicanperformance.com>

Product Layout

AfterGlow Controller

All AfterGlow's buttons are fully analog and pressure sensitive.

Product Overview:

The AfterGlow Controller omitted the gimmicks common to third party controllers, opting to focus on quality and design elements that make the difference in game play. AfterGlow introduces a new level of COOL with its look and design. The following will give you a run down of these design elements that are not found on other controllers.

Relocated L2 / R2 Buttons:

The L2 / R2 buttons have been relocated to give the user greater comfort and a much quicker reaction time than other controllers.

10% smaller design:

The smaller size adds to the comfort of AfterGlow by eliminating the bulk commonly found in 3rd party controllers.

Relocated Start & Select Buttons:

The Start and Select buttons have been relocated to give you easier and quicker access to them.

Neon Light Cable:

A unique glowing neon cable follows the perimeter of the AfterGlow Controller giving it a glow that has never been seen before in a gaming device.

Colored Circuit Boards:

Instead of offering different colored plastics on the AfterGlow, we have introduced a new level of cool by offering different colored circuit boards to provide a different color for everyone's taste.

Instructions:

1. Make sure your PlayStation®, PSone™, or PlayStation®2 is turned off.
2. Plug your new AfterGlow controller into controller port one. If you already have a controller and want to use AfterGlow as a second controller, make sure you have a controller plugged into controller port one and plug AfterGlow into controller port two.
3. Because of AfterGlow's relocated L2 / R2 buttons you will need to hold the controller slightly different than you would a standard PlayStation® controller. Place your index finger on the L1 / R1 buttons

Your middle fingers will be resting on the L2 / R2 buttons. The picture below shows the proper finger placement to maximize comfort and performance.

4. Insert a game into your PlayStation®, PSone™, or PlayStation®2.
5. Turn on your PlayStation®, PSone™, or PlayStation®2.
6. You are now ready to play.

WARNING

Do not use AfterGlow in conjunction with the Airflow™ controller from Nyko, the LumiCon™ controller from Mad Catz, or any Multi-Tap from any Manufacturer; it may cause damage to your PlayStation®2 System or your new AfterGlow controller.

Trouble Shooting

If you are having difficulties with your new AfterGlow Controller, please refer below:

My system turns on but I don't see anything on the TV.

1. Check to verify that your A/V cable is properly connected to your system.
2. Check to verify that your A/V cable is properly plugged into your television set.

My AfterGlow does not respond while in the system menu.

1. Check to verify your AfterGlow is firmly and properly plugged into controller port one.

My AfterGlow does not respond while in the game.

1. Check to verify your AfterGlow is firmly and properly plugged into controller port one.
2. If the game only functions in Analog Mode, press the analog button until the LED turns red.
